CHELTHENHAM

(2) *The Care of the Body.* By FRANCIS CAVANAGH, M.D.

This small book touches on an astonishing number of subjects. It contains a great deal of useful knowledge with regard to bodily hygiene, but the author is inclined to press unduly matters of personal opinion which have not as yet emerged out of the region of fads. It is a useful book. It is, however, quite possible for the ordinary person to know too much about the working of that most intricate of machines, the human body, and we have some sympathy with the mother who wrote to an elementary teacher: "Please, don't tell Mary Jane any more about her inside; it makes her very conceited."

(3) *The Health of the Skin.* By GEORGE PERNET, M.D.

An interesting and suggestive sketch on the anatomy, functions, and care of the skin. The references to classical and medieval literature on "that round, spreading fence which, like a sea, girts the isle in every part, . . . a fence, a spy, a watchman, and a wall," are most attractive. The chapter on the common parasites of the skin should be found very useful, and might be made the basis of more systematic instruction on this subject. School inspection and all the other machinery of the Local Government Board have failed to eradicate certain popular superstitions. Then simple facts in this book carefully taught to the rising generation will go far towards making the schools of the future less perilous for the children of careful, self-respecting parents.

(4) *The Care of the Teeth.* By ARTHUR T. PITTS.

It is slowly being recognized that dental caries is the origin of many of the diseases of modern life, as well as being a serious loss to the State of many who would otherwise be healthy citizens. Mr. Pitts has put his case well and forcibly, and, when he pleads in the last chapter for a public health dental service, he carries his readers with him. This book deals with the life history of the tooth, the modern conditions that tend to cause disease, and the means which may be taken to ensure the maintenance of the teeth in a healthy condition.

(5) *The Health of the Child.* By O. HILDERSHEIM, M.D.

No higher recommendation is required than to note that one of our greatest authorities on child life has stood sponsor to this little manual. It supplies a real need, for, though there are many books written on the subject, few, if any, give the necessary know-

ledge in a way so simply expressed and so easily understood. The author's foreword insisting on cleanliness as the key-note to health, and defining dirt as "microbes misplaced," lays stress on the meticulous care in small things so important in the rearing of healthy children. This simple and practical book should be an invaluable friend and guide to mothers, health visitors, and all those who are interested in child welfare.

The Seven Ages of Woman. By Mrs. SCHARLIEB, M.D.
(6s. net. Cassell.)

Few people are better fitted to describe these periods than Mrs. Scharlieb, with her special knowledge of the subject and her wide and sympathetic outlook on human nature. The chapters dealing with the child and girl, and the problems, both moral and physical, connected with her rapid growth and development should prove most valuable to teachers as well as to mothers. The difficult question of how and when to instruct children on sexual matters is discreetly treated. Our only criticism of this excellent book is that it contains for the non-medical reader rather more information than seems to us desirable of symptoms and their treatment. But, to anyone going to the Colonies or to any place where doctors are not easily obtainable, this should be an added attraction. Every middle-aged woman should read and digest the last chapter on How to Grow Old Gracefully.

A great deal has been written of late years on the various problems connected with the hygiene of schools. Much information, however, on these subjects is concealed from the eyes of ordinary people by being hidden away in Governments Reports, or in brochures dealing with special points. But all teachers, especially those who have to do with elementary schools, who desire to find in a moderate compass a survey of the whole subject, may be recommended to read *School Hygiene*, by Dr. C. BURGERSTEIN, of Vienna (translated), Harrap, 3s. 6d. net. There are some wise remarks (page 86) on the question of co-education which, in some quarters, is being widely advocated, and also upon the importance of properly designed school-desks. To the English mind a good deal that is said on the question of punishments will seem far-fetched. The normal boy does not, we think, feel very acutely the dishonour

ENGLISH GRAMMAR, WITH ANALYSIS AND PARSING.

By H. G. SMITH, B.A., Senior English Master, King Edward's School, Camp Hill, Birmingham; and G. H. BALL, M.A., Head Master, King Edward's School, Camp Hill. 1s. 6d.

ENGLISH COMPOSITION, INCLUDING PRÉCIS AND PARAPHRASE.

By H. G. SMITH, B.A., and G. H. BALL, M.A. 1s.

These books have been written with a view to providing a course in English Grammar and Composition suitable for use in secondary schools. They aim at explaining the fundamental rules of the language and making clear the difficulties which teachers of Latin and French experience in imparting a knowledge of their subjects to young boys.

The above two books are issued in one volume entitled "English Grammar and Composition," and form a three years' course in English. 2s.

POETRY FOR BOYS.

By STANLEY MAXWELL, M.A. 1s. 6d.

A collection of poems of established literary merit printed in bold type.

"Such is the superiority of Mr. Maxwell's collection over every other similar kind of work we are acquainted with that not the least apology is due for its appearance. The selections have been made with a fine discernment of what will appeal to the interest of boys."—*Secondary Education*.

THE MERCHANT OF VENICE.

With revised Text, Questions, Notes, and Appendixes. By G. H. BALL, M.A., and H. G. SMITH, B.A. 1s. Text only, 6d. net.

"The chief feature of this edition is the series of appendixes which is admirably contrived. Notes, suggestions for character study, and essay writing thereon, short expositions of all outstanding features of interest, and a set of examination papers, old and new, are provided, and are of invaluable help to the earnest student. The text is in good plain type."—*Times*.

SHAKESPEARE'S KING HENRY V.

Edited by the Rev. C. R. GILBERT, M.A. 1s. Text only, 6d. net.

"Differs from the usual school editions in that all the helps are placed in the book after the text. These helps are of a thoroughly useful and workmanlike matter."—*Educational News*.

FRANCIS CHANTREY: DONKEY BOY AND SCULPTOR.

By HAROLD ARMITAGE. Illustrated. 1s.

A wholly delightful reader for pupils of 10 to 12.

EXERCISES IN FRENCH FREE COMPOSITION FOR UPPER CLASSES.

By R. R. N. BARON, M.A., French Master, Cheltenham Grammar School. 185 Exercises. Fourth Edition. 1s. 6d.

TRISTAPATTE ET GORET, ET AUTRE OONTES. 1s.

AN INTRODUCTION TO HEAT.

By ARTHUR R. LAWS, B.Sc., and GEORGE W. TODD, B.A., D.Sc., Science Masters at the Royal Grammar School, Newcastle-on-Tyne. With 106 diagrams. 2s. 6d.

The main idea underlying it is that boys are gifted with a large amount of curiosity, and that when they once realize that there is something behind many of the phenomena of everyday life they are prepared to take a good deal of trouble to satisfy their inquisitive instincts.

OUTLINES OF APPLIED PHYSICS.

By H. STANLEY, B.Sc., Lecturer in the Merchant Venturers' Technical College, Bristol. With 75 Diagrams. 2s. 6d.

"In the main a series of examples in theoretical physics, for not only are there numerous numerical exercises at the end of each chapter, but more than four hundred of a miscellaneous character at the end of the book. The book will probably be found quite useful."—*Nature*.

FIRST SCHOOL BOTANY.

By E. M. GODDARD, B.Sc., Science Mistress, Girls' Secondary School, Colchester. With 207 Diagrams. Crown 8vo, 2s. 6d.

"An excellent combination of practical exercises and clear explanations, illustrated by good bold outline drawings. The pupil who works conscientiously through the physiological experiments, and laboratory and field observations described in this small volume, will have won something better than examination successes."—*Nature*.

The book covers the syllabus of the Oxford and Cambridge Junior Local Examinations.

NOTES ON THE GOSPEL ACCORDING TO ST. MATTHEW.

With Questions and Concordance for the Use of Schools. By the Rev. C. R. GILBERT, M.A. With 3 Maps and an Illustration. Crown 8vo. 1s.

EXAMPLES AND TEST PAPERS IN ALGEBRA.

By W. J. WALKER, M.A., Head Master of Woodhouse Grove School, Apperley Bridge, Bradford. With or without Answers, 2s. 6d.; and in two volumes each 1s. 6d. with Answers, or 1s. 3d. without Answers.

"There are plenty of mental or oral questions and test papers. The type is large, and most left-hand pages begin with a new exercise. The examples are for the most part original, and are carefully arranged."—*Mathematical Gazette*.

PREPARATORY ARITHMETIC.

By F. C. BOON, B.A., Principal Mathematical Master at Dulwich College. Second Edition. With Answers, 1s. 6d.; without Answers, 1s. Answers separately, 6d. net.

A revised and enlarged edition of this well known book. A large number of new examples have been added, and the few misprints in the first edition corrected.

A FIRST SCHOOL CHEMISTRY.

GRAPHS IN ARITHMETIC, ALGEBRA, AND TRIGONOMETRY.

By W. J. STAINER, B.A., Head Master of the Municipal Secondary School, Brighton. With 120 Diagrams. 2s. 6d.

LATIN EXTRACTS FOR SIGHT TRANSLATION.

With Hints to Beginners. By G. H. BALL, M.A., Head Master of King Edward's School, Camp Hill, Birmingham. 1s.

THE NEW PRELIMINARY GEOGRAPHY.

By H. B. WETHERILL, M.A., Head Master of Allahabad High School. Fourth Edition revised to September, 1915. With Illustrations and 19 Diagrams. 1s. 6d.

of being caned, and we take leave to doubt whether the prospect of being deprived of a shower-bath (p. 136) would act as an effective deterrent in English schools. The illustrations and diagrams add value to the book, and there is an excellent index.

For some time past it had been increasingly recognized that the condition of life nowadays had become so complex as to make it impossible to maintain corporate efficiency on a basis of uncontrolled individualism. More and more it has been found necessary, both for the general good of the State and for the welfare of the workers, to set limits to the unfettered action of the individual in the industrial sphere. It is more than probable that the War will have as one of its results a quickening of this tendency, as a deeper corporate corporate consciousness will have been aroused in the nation thereby. No one can rise from a perusal of the new volume of the "Cambridge Health Series," entitled *Occupation, from the Social, Hygienic, and Medical Points of View*, by Sir THOMAS OLIVER, LL.D., D.Sc., Professor of Medicine at the University of Durham (Cambridge University Press), without having it borne in upon his mind how tragic a background of disease and premature enfeeblement of the workers there is to the industrial life of England. In this well printed book of little more than a hundred pages, with a conciseness and lucidity which is beyond praise, Sir Thomas Oliver has marshalled the main facts concerning the relations between occupations and health. No one who reads it can doubt that, though much has been done in the past hundred years to combat the evils existing in connexion with our great industries, much yet remains to be done. The special diseases connected with particular trades and the pernicious effect of different sorts of dust and of noxious gases and the best methods of combating them, are dealt with as fully as the limits of space permit, and the statistical information provided is of very great interest and value. The chapter (X) showing the new sources of danger arising out of the increasing use of electricity in industrial life is especially informing. Many subsidiary topics arising out of the main subject are dealt with in the course of the book, some of which are of special interest to educationists; for example the effect of sweated industries carried on at home, on the children of the family, who are forced to enter upon a life of toil at far too early an age. Everyone who wishes to become acquainted with the condition of industrial life in relation to the health of the community may well be advised to read this book. It should be

added that a short bibliography is attached to each chapter of the book. For "abstractions," on page 67, read "distractions."

Mothercraft. An Advanced Course of Lectures delivered under the auspices of the National Association for the Prevention of Infant Mortality. (National League for Physical Education and Improvement.)

A series of practical articles by well qualified doctors and nurses on a variety of subjects intimately connected with the welfare of infants and mothers, and ranging over the more complicated *Problems in Artificial Feeding*, by Dr. Eric Pritchard, to the simpler question of *Cookery for Infants and Children under School Age*, by Miss Florence Petty. Everything that helps to arouse the nation to the need and necessity for providing knowledge and assistance for poor mothers is of supreme value; nevertheless, the growing literature upon this subject arouses the thought in an intelligent person as to whether any of this is of real consequence so long as the married woman is permitted to go out to factory or mill or what not, and earn wages, when she should be fulfilling the part of wife and mother at home.

MODERN LANGUAGES AND LITERATURE.

Les Ailes de Courage. Par GEORGE SAND. Edited by F. B. KIRKMAN. (3s. Cambridge University Press.)

This forms a pleasing addition to Mr. Wilson-Green's series of "Modern French Texts." There is a *Lexique des mots moins usités*; otherwise the editor has confined himself to *exercices* on the text and a note of two pages on George Sand. It is not possible in a *conte rustique* to tell the full story of George Sand's life. We cannot see how it will profit a class of beginners to be told that in her second stage the author passed from the novel of love to the *roman à thèse* without any explanation. Much better to have given Matthew Arnold's sketch of George Sand as a *grand-mère* in her Berri home.

German-English Dictionary. By A. G. HALTENHOFF. (4s. net. Hachette.)

This comes to us as a new work, but it bears no date, and as the author is described as "Lecturer of German in the University of London," it must date back a good many years. It professes to give most modern technical words in art and science, but idioms

(Continued on page 532.)

"Of particular value to the higher forms of schools and for the use of teachers."—*Guardian*.

THE CRADLE of CHRISTIANITY

OR, SOME ACCOUNT OF THE TIMES OF CHRIST.

By S. P. T. PRIDEAUX, B.D. Foreword by Rev. Canon VAUGHAN, M.A. Crown 8vo, cloth gilt, 178 pp. 2s. net.

The School World says: "Deserves to be very widely known. It attempts, with marked success, to give a clear glimpse of the Palestinian world into which the Messiah was born. . . . The work is scholarly and trustworthy, and at the same time clear and readable. Careful writing and painstaking research are evidenced in every chapter."

The Guardian says: "In point of size, in succinctness, and in graphic and accurate grouping of facts Mr. Prideaux's description of the conditions of the times prior to and circumstantial with the Gospel history will fill a real gap."

HINTS ON FRENCH SYNTAX.

By FRANCIS STORR, B.A. Camb., Officier d'Académie, Occasional Inspector to Board of Education, Scottish Education Department, and Central Welsh Board; Examiner to Oxford and Cambridge Joint Board, Cambridge Higher Locals, Scottish Education Department, Civil Service Commission, University of London, &c., &c.

"A capital little book, which we have no hesitation in recommending to French students."—*The Pall Mall Gazette*.

"Mr. Storr's Hints are to the purpose. They are intended for schoolboys, but grown-up people who wish to avoid making elementary blunders in either writing or speaking may use them with advantage."—*The Athenæum*.

Extract from Author's Preface.—At the request of several Masters and Mistresses, who have used the *Hints* with their classes, I have added an Appendix with easier examples. In them more French words are supplied, and more references are given to the rules which they illustrate. The method of pitfalls is rightly discredited, and it is generally allowed to be a more fruitful discipline to prevent a pupil from making blunders than to rap him over the knuckles for making them. Even with the references the happy-go-lucky boy and the cocksure boy will both be caught tripping.

and phrases are neglected. Thus, *geben*, which has a whole page in Cassell's "Breul," is here dismissed in a line. It would be useless to search for recent terms like *Zeppelin*, *Handgranate*.

Among reprints we have to acknowledge *The Inseparables*: an Oxford Novel of To-day, by JAMES BAKER, Popular Edition (2s. net, Chapman & Hall); *Tennyson's Poems, 1830-1865*, with four illustrations from famous paintings (Cassell).

A Book of German Verse from Luther to Liliencron. Edited, with Introduction, Outlines of German Versification, and Notes, by H. G. FIEDLER. (3s. net. Clarendon Press.)

Prof. Fiedler does not inform us for whom this latest *Deutsche Lyric* is intended, but the lyrics selected, and still more the notes, show that it appeals to beginners or pupils *in statu pupillari*. Heine's dictum that every treatise on modern German literature must begin with Luther is accepted as self-evident, and other forms of verse—dramatic, satirical, and narrative—are rigidly excluded. Yet it seems to us that the young student needs rather to be shown how the German lyric had its rise partly in Latin hymnology and still more in the *Saga*, *Märchen*, and *Volkslied*. So, again, the testimony of Prof. Robertson to the rich promise of the recent revival of lyric poetry in Germany will not appeal to him when the only living poet quoted is Victor Blüttgen, and, whatever their merits, there is no new note struck in the seven selections from Liliencron. Twenty pages of the introduction are devoted to German prosody. German scansion is in essentials the same as English, and a few notes is all that the pupil will need. Lessing is credited with the introduction of blank verse from England to Germany, and to scan his *Nathan* with anacrusis or *einsilbiger Auftakt*—Der | Richter | spräch: wenn | shr mir | nür den | Väter—appears to us far fetched. Prof. Fiedler is careful to exclude anything that could offend English susceptibilities; but we are not a thin-skinned nation. It was the War of Independence that produced some of the finest German lyrics. We miss the name of Arndt—*Der Gott der Lilien wachsen liess* and *Der Wacht am Rhein*. We have, perhaps, been too prone to mark what is amiss and gladly acknowledge that the volume is admirably printed and that the notes (in German) are brief and to the point. Will not Prof. Fiedler give us an anthology for advanced students, including scenes from the drama, longer poems such as Goethe's Roman elegiacs, and, above all, specimens of living lyricists? Of German

poetry for beginners there is already an ample choice, but such a volume as we have indicated is in England still to seek.

MATHEMATICS.

A First Course in Statics. By TUCKEY and NAYLOR. (3s. 6d. Oxford University Press.)

A very good example of the advances recently made in the teaching of mathematics owing to correlation with physics. The first principles used in the initial chapters are based upon experimental work and simple reasoning. It is only in the final chapter that these first principles are reduced to the parallelogram law and a set of propositions in deductive sequence, "as these proofs are often asked for in examinations." The book begins with the lever and immediately proceeds to moments, the notes on the practical work naturally leaving details to the individual teacher. A discussion on friction is introduced at an early stage, and then the machines are dealt with. A long important chapter follows on graphical methods, with numerous practical examples. The remaining chapters are necessarily of a more stereotyped character. A very neat elementary proof is given for the CG of a circular wire. The examples really form examples on statics; they are not merely disguised trigonometry of an academic character.

A First Course in Geometry. By CHARLES DAVISON, Sc.D. (Cambridge University Press.)

Mr. Davison's name is already a familiar one in connexion with school texts on elementary geometry. The scope of the present little volume is that of the first three books of Euclid's *Elements*. Propositions which the author deems essential in a beginner's course of study are alone included. The style in which the work is issued is in harmony with that adopted in previous publications by the same writer.

Key to Geometry for Schools. Vols. II-VI. By W. G. BORCHARDT, M.A., B.Sc., and the Rev. A. D. PERROTT, M.A. (8s. 6d. net. G. Bell.)

We have little sympathy with the constant use of a "key" or its equivalent, whether by the teacher or by the self-taught student. An honest attempt at independent solution creates interest in the problem concerned, tends to produce skill, and helps to store the

LATIN VERB PARADIGMS.

By W. LOBBAN, M.A.

Being the Complete Inflexions of Regular Latin Verbs arranged in Stems. With **Introductory Notes** and **Exercises**.

Royal 8vo, paper boards, 1s. net.

Intended for the use of junior classes, these paradigms set forth the forms of the Verb on the principle of stem-groups, and constitute the most expeditious, as well as the most logical and interesting, method of teaching and learning the Latin verb.

B. H. BLACKWELL, Broad Street, Oxford.

Mr Blackwell will be pleased to consider applications for specimen copies from teachers.

Telephone: Mayfair 3850.
Secretary: Miss A. C. Franklin.

Headquarters of the Corps:
50 UPPER BAKER STREET,
LONDON, N.W.

Women's National Land Service Corps.

President: HIS GRACE THE DUKE OF MARLBOROUGH, K.G.
Chairman of Executive Committee: Mrs. ROLAND WILKINS.
Hon. Treasurer: The Hon. Mrs. NORMAN GROSVENOR.

APPEAL FOR

Recruits for Agricultural War Work.

**1,000 EDUCATED WOMEN wanted at once
FOR THE PERIOD OF THE WAR.**

- (1) Skilled milkers and those used to farm work.
- (2) Partially trained workers.
- (3) Untrained women who can either:
 - (a) go on the land at once in squads;
 - (b) receive a six weeks' training first.

Short trainings of four to six weeks are provided for applicants who can afford to pay maintenance fees ranging from £1 to 25/- a week; a limited number of free trainings are given.

At the end of the training girls will be placed out either singly, or in squads of four or five, to work for farmers in various parts of the country at the local agricultural rates.

The Women's National Land Service Corps is recognized by the Government as the central voluntary body for enrolling girls and women of the professional and leisured classes for work upon farms; and will co-operate with Women's County Committees in this connexion.

The DEMAND for such workers is increasingly insistent, and RECRUITS ARE URGENTLY NEEDED.

All who are able to undertake this work, which is of the GREATEST NATIONAL IMPORTANCE, are invited to send in their names to—

THE SECRETARY,
Women's National Land Service Corps,
50 Upper Baker Street,
London, N.W.

Interviews: 10.30-4.30;
Saturday 10.30-12.30;
or by appointment.

DRUMMOND LATHES

Are right at the Front.
The important part played by Lathes in the present war cannot be exaggerated. A knowledge of Lathe Work means that at all times you are "Right There" and your services indispensable.
DRUMMOND LATHES stand for the "HALL MARK" of Accuracy, and in the education of all a good knowledge of Lathes and their uses is invaluable.
The $3\frac{1}{2}$ in. Lathe illustrated below is low in price, but capable of the highest class work.

WATFORD

STATIONERY, FURNITURE, BOOKS.

STATIONERY.

We have in stock a good range of Exercise Books, Drawing Books, Nature Note Books, Science Books, Flat Files, Filing Papers and Loose Leaf Devices, Foolscap Paper, Examination Paper, Drawing Paper, and every kind of Stationery for Schools and Colleges at moderate prices.

FURNITURE.

Our stocks of Furniture are very low, as all our heavy machinery has been employed on Munition and other Government work for some time. We can, however, undertake a few urgent orders, and we should much esteem inquiries.

TEXTBOOKS.

Our "List of Books for the Examinations, 1917," is ready, and we should be pleased to send a copy to any Head who has not received one. Our experienced staff is, of course, seriously depleted, but we still possess exceptional facilities for the execution of book orders.

THE EDUCATIONAL SUPPLY ASSOCIATION, LTD.

Stevenage House,
40-44 HOLBORN VIADUCT,
LONDON, E.C.

memory with facts worth knowing. Nevertheless, a "key" legitimately employed is of great value in that it may prevent undue loss of time, and in this sense a little volume such as the one before us is unfeignedly welcome. This one stands the test of a random examination of its methods and results. One obvious misprint has been noticed on page 31.

- (1) *New Concrete Arithmetic*. Sixth Year. By CHARLES PENDLEBURY, M.A., and H. LEATHER. (Cloth 6d., paper 5d. G. Bell.) (2) *Longmans' Explicit Arithmetics*. (Pupils' Books V and VI, cloth 5d., paper 4d.; Teachers' Books V and VI, 1s. each.) (3) *Tests for Blackie's Experimental Arithmetics*. (Books IV and V, 1½d. each.) (4) *The Kingsway Scholarship Tests in Arithmetic*. (4s. net; Answers, 3s. net. Evans Brothers.)

(1) A specimen volume of a course in arithmetic arranged by the authors and designed to extend over six years. The method of instruction outlined proceeds from the concrete to the abstract. Little appears beyond the questions framed for oral and written work, but such explanations as are introduced into the text are notably lucid in character. The type is very satisfactory, and the same may be said of the various details connected with the form of issue.

(2) Abundance of questions, supplemented in the teachers' volumes by the answers and by useful notes which are likely to be of much very valuable assistance in the preparation of lessons. Opportunities are afforded for the revision of earlier work. Pupils who have worked through Book VI have had instruction in approximations, in contracted and graphical methods, in the metric system, &c. A seventh book is in progress in connexion with each series of volumes.

(3) In teaching arithmetic a large selection of exercises is always acceptable. First, it affords power to vary the work set to the individual members of a class, and, secondly, it offers scope for frequent recapitulation. The pages of the above-mentioned volumes alone provide about fifteen hundred questions on the subject considered, a large proportion being of a concrete nature.

(4) The plan on which this little compilation is based is excellent. Not only is a review of the entire subject rendered possible, but facilities are given for the systematic strengthening of specially weak points.

SCIENCE.

Textbook of Embryology. Edited by W. HEAPE, F.R.S. Vol. I: *Invertebrata*. By Prof. E. W. MACBRIDE, F.R.S. (25s. net. Macmillan.)

There is no more fascinating field in the whole domain of zoology than the study of the development of animals from the fertilized egg up to the adult form. Embryology helps us to understand structure, to determine the homologies of corresponding parts, and to trace out affinities in a way which the comparative anatomy of adults alone would never enable us to do. Numerous investigators have worked at this most important subject, and have accumulated a vast store of information, more especially during the last fifty years. To give a comprehensive, yet condensed, account of the main facts and deductions has been the heavy task undertaken by Prof. MacBride in this handsome and weighty volume. In the course of some seven hundred pages he deals with the whole of the so-called "invertebrata"—a term used in a very wide sense, since it is made to include the Tunicata and Amphioxus. The chapters are necessarily of somewhat unequal merit, that on the Echinoderms being especially good. The system adopted by the author is to give as full a description as possible of the development of a typical species and then to compare it with other related forms. Not only are we given a very clear account of the facts of normal development, but also of the chief results of experimental embryology. This very interesting and important modern study aims at ascertaining the causes of ontogenetic differentiation, and at analysing the intimate physico-chemical processes which underlie it. The text is provided with more than four hundred and fifty illustrations, most of which are admirably chosen and executed, and add greatly to the value of the work. Prof. MacBride has earned the gratitude of all English-speaking advanced students and teachers of embryology for this the best textbook in our language published since the appearance of Balfour's classical work some thirty-five years ago.

Morphology and Anthropology. A Handbook for Students. By W. L. H. DUCKWORTH. Second Edition. Vol. I. (Cambridge University Press.)

It is nearly fifty years since Darwin wrote *The Descent of Man*, and the stormy controversies about man's origin have now died

ENGINEERING AND TECHNICAL OPTICS.

NORTHAMPTON POLYTECHNIC INSTITUTE.

ST. JOHN STREET, LONDON, E.C.

ENGINEERING DAY COLLEGE.

FULL DAY COURSES in the

Theory and Practice of Civil, Mechanical, and Electrical Engineering will commence on Monday, 2nd October, 1916. The Courses in Civil and Mechanical Engineering include specialization in Automobile and Aeronautical Engineering, and those in Electrical Engineering include specialization in Radio-Telegraphy.

ENTRANCE EXAMINATION on Tuesday and Wednesday, 26th and 27th September, 1916. These courses include periods spent in commercial workshops and extend over four years. They also prepare for the Degree of B.Sc. in Engineering at the University of London. Fees, £15 or £11 per annum.

THREE ENTRANCE SCHOLARSHIPS of the value of £52 each will be offered for competition at the Entrance Examination in September, 1916.

TECHNICAL OPTICS.

Full and Part Time Courses in all branches of this important department of Applied Science will be given in specially equipped laboratories and lecture rooms. An AITCHISON SCHOLARSHIP (value £30) will be offered in this department at the Entrance Examination.

Full particulars as to fees, dates, &c., and all information respecting the work of the Institute can be obtained at the Institute or on application to

R. MULLINEUX WALMSLEY, D.Sc., Principal.

SOUTHPORT PHYSICAL TRAINING COLLEGE.

Beautifully situated near the Sea in healthy surroundings.

President:

Admiral Lord CHARLES BERRSFORD, K.C.B., M.P.

Principals:

A. ALEXANDER, F.R.G.S.; Mrs. ALEXANDER.

The Staff consists of Medical Lecturers and experienced teachers in every branch of Physical Training, including a Swedish Mistress from the Royal Gymnastic Institute, Stockholm.

GIRLS of good education are trained as scientific teachers of Physical Training to qualify them for appointments as Gymnastics, Games, and Health Mistresses in schools and colleges. The course, extending over two years, includes:—Physiology, Anatomy, School Hygiene, First Aid and Sick Nursing, Remedial Exercises and Massage, Swedish Educational Gymnastics (Ling's System), Outdoor Games (Hockey, Net-Ball, Cricket, Tennis, Badminton, &c.), Dancing (including Old English and Morris Dances), Swimming and Rowing, Organized Recreative Games for School and Play-ground.

Diplomas and Gold Medals are awarded to successful students.

The demand for capable teachers of Physical Training is steadily increasing, and students of this College frequently obtain appointments before completing their training.

HEALTH STUDENTS.

Cases of spinal curvature or general physical weakness are received in residence, and treated under medical supervision.

permitted to Lord Kinnaird, the Right Hon. Viscount Gladstone, the Hon. and Rev. E. Lyttelton, D.D., and others.

Prospectus from the Secretary.

LIVERPOOL PHYSICAL TRAINING COLLEGE,

BEDFORD STREET, LIVERPOOL.

LING'S SWEDISH SYSTEM.

Principal: Miss IRENÉ M. MARSH.

For Ladies as Gymnastic and Games Mistresses, and Medical Gymnastic Teachers and Masseuses.

THE Course is two years, and includes a large number of subjects, making the training very valuable and enabling each Student to specialize in some particular branch.

It includes Educational and Remedial Gymnastics, Fencing, Rowing, and Swimming. All Games are taken to a very high standard, and Dancing is also made a speciality. Also it includes two subsidiary subjects—Needlework and Elocution.

Lectures and lessons are given in Anatomy, Physiology, Pathology and Orthopedics, Ambulance, Home Nursing, Theory of Movement, &c.

For prospectus apply—COLLEGE SECRETARY.

THE INCORPORATED BRITISH COLLEGE of PHYSICAL EDUCATION.

5 & 7 Johnson Street, Notting Hill Gate, London, W. (Founded 1891.)

EXAMINATION for MEMBERSHIP (including the Theory and Practice of British and Swedish Educational Gymnastics), LICENTIATESHIP, and for the SCHOOL TEACHERS' DRILL CERTIFICATE are held thrice annually—in February, June, and November respectively, but additional (Local) Examinations for School Teachers are held under certain conditions. Full particulars to be obtained on application.

Education Committees, Schools, Colleges, and others requiring qualified INSTRUCTORS of either sex should communicate with

FRANK H. GELLING, Hon. Secretary.

BEDFORD PHYSICAL TRAINING COLLEGE.

LING'S SWEDISH SYSTEM.

Principal: Miss STANSFELD

(President of the Ling Association of Gymnastic Teachers).

The object of the College is to train Students to enable them to become Teachers of Gymnastics and Games in Schools.

The Course of Training extends over two years, and includes the Theory and Practice of Gymnastics on the Swedish System, Massage and Medical Gymnastics, Anatomy, Physiology and Hygiene, Dancing, Lacrosse, Lawn-tennis, Hockey, and Cricket.

An educational centre like Bedford affords special facilities for practice in Teaching and professional coaching in Games. Swimming and Boating in the summer.

For Prospectus apply—SECRETARY, 37 Lansdowne Road, Bedford.

CHELSEA PHYSICAL TRAINING COLLEGE FOR WOMEN. (SWEDISH SYSTEM.)

Head Mistress: Miss DORETTE WILKIE.

Three Year's Diploma Course of University Standard. The exceptional training in Class Teaching and Lecturing afforded to students at this College enables them to secure appointments of the highest standard.

Apply for Prospectus to SECRETARY (Room 85), S.W. Polytechnic Institute, Chelsea, London. Telephone: Western 899.

DUSMO
The Dustless Sweeping Powder

WHY NOT HAVE A CLEAN BILL OF HEALTH?

DUST in your SCHOOL is the CARRIER of **DISEASE** which may ATTACK those least able to resist it. You can REMOVE this **DANGER** by the use of **DUSMO** when sweeping.

A line of **DUSMO** laid down and swept before the broom will prevent dust rising, and so dry scour the floor as to render wet scrubbing an unnecessary expense, thus effecting

A GREAT ECONOMY IN YOUR CLEANING BILL.

Copy of Letter recently received from a well known College:—

"We have completed a period during which **DUSMO** has been severely tested, and I am now convinced of its efficacy, although I was at first sceptical as to its merits. You will need no better testimonial than the accompanying order for six more bags."

DUSMO Co., Ltd., West Ham Lane, Stratford, London, E.
Tel.: Stratford 99.

"A Sweeping . . . Assertion."
Kills Dust and Germs

down. Although he is recognized as the highest species of the Order Primates in the Class Mammalia, there remains much uncertainty as to man's exact relationship to living anthropoids and to the more or less intermediate fossil forms which have recently been unearthed. Moreover, the study of the delimitation and affinities of the living races of mankind raises problems of the deepest interest and importance. Dr. Duckworth, in this useful handbook, gives us a full and well illustrated account of the more important anatomical features of the Primates, more especially those which throw light on the evolution of mankind. This second edition is enlarged and improved, and the first volume before us deals with lemurs, monkeys, and apes. The information is accurate and clearly set forth. The work may be heartily recommended to students of zoology and physical anthropology, who will look forward to the early appearance of the second volume dealing more especially with man.

PRIZE COMPETITIONS.

A Prize of Two Guineas is offered for the best translation of the following passage from Floris Delattre's "La Culture par l'Anglais" :—

Les mots ne coïncident pas d'une langue à l'autre, exactement, et ne peuvent que rarement se juxtaposer. Il n'existe entre eux aucun lien de dépendance réciproque : pour un rapprochement accidentel, dix écarts surgiront aussitôt. La langue d'une nation est parfaitement adéquate à son tempérament intellectuel et moral, mais, et à cause de cela même, elle lui est exclusivement personnelle. Chaque mot traîne après lui un cortège d'associations et de souvenirs anciens, d'impressions inconscientes et héréditaires que l'on ne saurait traduire. Pour ne prendre qu'un exemple, nous apprécions bien, en France, l'attrait du coin du feu, le charme de la chambre claire et coquette où, parmi le savant désordre des

meubles pittoresques, les heures s'écoulent légères en conversations aimables, où l'on admet et choisit les enfants, où se marient harmonieusement le bien être, le bon goût et le luxe, mais nous ignorons le confort solide des intérieurs anglais, la cordialité tonique et virile, presque toujours moralisante même, qui y règne, le charme du repos, en ces fauteuils profonds où s'abandonner est "comme un triomphe remporté sur la vie hostile," la quiétude des longues soirées d'hiver à laquelle prédisposent le climat humide et froid, et, souvent, la vie trépidante de la cité, de sorte que *la douceur du foyer* est, pour un Français, tout autre chose que le *home, sweet home* d'un Anglais. Les traduire, l'un par l'autre, c'est recouvrir d'un grossier badigeon des nuances délicates, et détruire, d'un coup, notre lent travail de mise au point minutieuse et de création d'atmosphère. La traduction dans nos classes peut être utile, sans doute ; elle est même indispensable pour fixer, pour contrôler, pour clôturer une explication ; mais elle constitue un exercice indépendant, et d'un intérêt secondaire. Nous pourrions estimer que notre méthode a porté ses fruits si nous voyions nos bons élèves s'en montrer peu soucieux ou s'en déclarer eux-mêmes insatisfaits.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners will be required to send real names for publication.

All competitions must reach the Office by September 15, addressed "Prize Editor," THE JOURNAL OF EDUCATION, 3 Broadway, Ludgate Hill, E.C.

OUR OCTOBER NUMBER—SPECIAL SUPPLEMENT.—The next number of *The Journal of Education* will be published on Saturday, September 30, 1916. In addition to the usual features it will contain a Supplement, entitled "The Summer Schools of 1916," with accounts of the various educational gatherings held during the vacation.

Supplement to THE JOURNAL OF EDUCATION.

No. 566.

SEPTEMBER 1, 1916.

SOME RECENT BOOKS FOR TEACHERS.

What Is Education?

By ERNEST C. MOORE, Professor of Education in Harvard University. 12mo, cloth, 356 pages. 5s. net.

In this work an attempt is made to discuss some of the fundamental pre-suppositions of education through a series of essays, somewhat closely related, upon a few of the subjects which teachers must be continually turning over in their minds, in order that clear ideas on them may help in shaping and controlling their work.

SCHOOL WORLD.—"Professor Moore has given us a most thorough, sincere, and able piece of work... we thank him for this scholarly, well-written, and timely volume."

A.M.A.—"A book that should interest and stimulate every teacher; and so wonderfully simple that no teacher will find it difficult to read even at the end of a hard day's teaching."

Psychology of High-School Subjects.

By CHARLES H. JUDD, Professor of Education and Director of the School of Education, the University of Chicago. 8vo, cloth, 515 pages. 6s. net.

A scientific treatment of the methods and material of high-school teaching dealing with each subject in its psychological aspect and deductively working out its manner of presentation.

The book gives an answer to such questions as the following:—What does it mean to say that algebra trains in the power of abstraction? What does it mean to say that the use of a tool in the manual training class cultivates a controlled form of reaction? What are the successive stages of reasoning aimed at in a textbook on botany or history? &c.

THE JOURNAL OF EDUCATION.—"If any teacher feels himself in a groove, a study of this book will make him think and raise problems for him..."

JOURNAL OF EXPERIMENTAL PEDAGOGY.—"Professor Judd undertook a difficult task when he essayed to set out the psychological processes involved in the acquisition of the ordinary secondary school subjects under the guidance of the teacher. His reputation as a psychologist seemed to fit him admirably for the task... It may be said at once that he has given us a book of great value. Its freedom from technicalities will make it widely accessible to teachers who start its perusal with relatively little psychological knowledge, and they cannot fail to gain a truer insight into the mental processes which they are trying to stimulate."

Methods of Teaching in High Schools.

By S. C. PARKER, Professor of Educational Method in the School of Education, the University of Chicago. 12mo, cloth, 529 pages. 6s. net.

This book introduces the student to a study of the principles which underlie instruction in high school subjects. The author considers that instruction should be adapted to contemporary social needs, that methods should be founded on sound psychological principles, and that principles of scientific business management should be applied to the conduct of teaching.

THE JOURNAL OF EDUCATION.—"The author has had wide experience as a teacher and a lecturer, and comes to his work with a full mind and a ripe judgment, and much that he has to say is particularly suggestive and practical... Of the treatment of the subject-matter it is difficult to speak with unqualified praise... Prof. Parker's volume is certainly to be recommended to young teachers, who will find it suggestive and helpful."

The History of Modern Elementary Education.

By S. C. PARKER, Professor of Educational Method in the School of Education, the University of Chicago. 12mo, cloth, 505 pages. Illustrated. 6s. net.

An intensive treatment of the history of elementary education from the first vernacular schools of medieval cities down to the present time. It contains accounts of the changes which have been made in the elementary curriculum, and shows how the methods of teaching the various subjects have been influenced by Rousseau, Pestalozzi, Herbart, Froebel, Dewey, and other prominent educational reformers.

Everyday Pedagogy.

By L. I. LINCOLN, Supervisor of State Normal School, Farmington, Maine, U.S.A. 12mo, cloth, 310 pages. 4s. 6d. net.

"Everyday Pedagogy" deals with school organization and management, the general principles of teaching, and the specific presentation of elementary school subjects. Every side of school life is discussed, and many valuable suggestions made for the help of the young teacher. In many cases the work has been applied to the rural school, since it oftentimes lacks equipment and special teachers.

EDUCATIONAL HANDWORK.—"There is a distinct American flavour about this book, which does not, as might be thought, detract from its usefulness, but, on the contrary, increases its interest... It is essentially the work of a practical educationist... Get it and read it."

Language Work in Elementary Schools

By M. A. LEIPER, Western Kentucky State Normal School. 333 pages. 5s. net.

Although no subject requires more careful preparation on the part of the teacher than does the English lesson, this book is one of the very few to give a thorough treatment of the best methods of handling the subject in all the various stages of the elementary school. The author, in his introduction, deals with the general aspects of the teaching of language in elementary and secondary schools, he devotes a chapter to each of the various grades in the elementary school, and details very concretely how oral and written work may best be handled in each, and he supplies appendixes containing a fine collection of memory gems, and concrete examples of what can be accomplished in the way of dramatizations.

THE JOURNAL OF EDUCATION.—"This book, dealing with the problem of how the child who comes from an evil-speaking home is to be levelled up, will be useful to British, and more particularly to English teachers. The thinking process is identified with language, and our author insists that oral composition should be as deliberately planned and executed as written work."

The Normal Child and Primary Education.

By A. L. GESELL, Assistant Professor of Education in Yale University, and B. L. GESELL. 12mo, cloth, 342 pages. Illustrated. 5s. net.

A comprehensive, non-technical study of the child, which will give the teacher a sympathetic insight into the mental processes of early growth and development. The discussion includes both theory and practice, emphasizing the scientific basis of pedagogical method.

CHILD.—"The work is in every way a stimulating one and can be recommended to young teachers desirous of obtaining a scientific basis for rational instruction and education for the child in our elementary or primary schools."

L'ANNÉE PÉDAGOGIQUE.—"Bien que spécialement destiné à l'éducation des jeunes enfants, ce livre sera lu de tous avec profit et intérêt."

How Children Learn to Draw.

By WALTER SARGENT, Professor of Art Education in the School of Education, the University of Chicago, and ELIZABETH E. MILLER, Instructor in Art in the Elementary School of the School of Education, the University of Chicago. 12mo, cloth, 264 pages. Illustrated. 4s. 6d. net.

The purpose of this book is to show how drawing may be taught, so that the majority of children will learn to use drawing well as a common and convenient means of expression. It presents methods which ensure definite progress from year to year, and which associate drawing helpfully with the other interests of school life. The larger part of the book consists of a detailed description of methods actually and successfully followed in the Chicago School of Education, and this is followed by suggestive statements of theory—based upon experiment and observation—as to how children learn to draw.

Essays on Mathematical Education.

By G. ST. L. CARSON, M.A., M.Sc., Reader in Mathematics in the University of Liverpool. 12mo, cloth, 139 pages. 3s. net.

A series of eight essays which have appeared in various mathematical periodicals from time to time, and which aim at encouraging teachers to continue their advocacy of a worthy form of mathematics, at the same time seeking better lines of approach and endeavouring to relate the subject in a reasonable manner to the various other interests of the pupil.

JOURNAL OF EXPERIMENTAL PEDAGOGY.—"This little book should find a place in the library of every training college for secondary teachers."

MATHEMATICAL GAZETTE.—"An opportunity of reading and comparing the component parts of an ordered survey of the whole of elementary mathematical education... should on no account be missed by anyone who really has the interests of education at heart."

SCHOOL WORLD.—"We consider these essays will be found most helpful by all who are concerned with the teaching of mathematics."

The Teaching of Geometry.

By DAVID EUGENE SMITH, Ph.D., Professor of Mathematics in Teachers College, Columbia University. 12mo, cloth, 339 pages. Illustrated. 5s. 6d.

This work considers in detail the rise of geometry, the changing ideals in the teaching of the subject, the development of definitions and assumptions, and the relation of geometry to algebra and trigonometry. It takes up the most important propositions that are considered in the ordinary course, showing their origin, the various methods of teaching them, and their genuine applications, thus giving to the teacher exactly the material needed to vitalize the work in school.

The Teaching of Arithmetic.

By DAVID EUGENE SMITH, Ph.D., Professor of Mathematics in Teachers College, Columbia University. 12mo, cloth, 196 pages. Illustrated. 4s. 6d.

The origin of arithmetic, the reasons for teaching the subject, the various noteworthy methods that have been suggested, and the work of the various school years are considered in this book. There is also a discussion of the subjects to be included, the nature of the problems, the arrangement of material, the place of oral arithmetic, the nature of written arithmetic, the modern improvements in the technique of the subject, and of many other phases of the teaching of arithmetic.

GINN & COMPANY, 9 ST. MARTIN'S STREET, LONDON, W.C.

"IT IS CLEAR

that a capable agent who has pursued his calling for years will have gathered, by visits, by personal interviews, and by correspondence, a globe of precepts, and that his profession of recommending schools is no idle pretence."

The Journal of Education, June, 1916.

This is the definition, by a competent judge, of what should constitute a
USEFUL SCHOLASTIC AGENT.

It may be presumed that no one would knowingly make trial of the services of any other kind, but it is still true that a proportion of Principals are induced to yield to the importunities of plausible and worthless concerns, with the resultant loss and disappointment that might be expected. This is a disillusioning experience for which there is no necessity. The established, reliable Scholastic Agencies are not many in number, and they are well known, and their record and standing easily to be ascertained. As one of these we have a sufficient claim to clients' confidence. If, further, we obtain the greater share of Parents' Inquiries, we also take unusual pains to secure them. At present our advertisements are appearing in nearly 400 papers in this country alone; and, outside of enemy countries, the War has made no difference in the circulation of our List of Schools.

As a result, few days pass without at least one letter of thanks from parents who appreciate the assistance we have given them. Principals are equally generous in expressing their indebtedness, as these acknowledgments, received in July from two Head Masters of important schools, testify:—

"Personally, I have found your firm to bring in 90 per cent. of the pupils who come to me through Scholastic Agents."

"I must again express my appreciation of the splendid way you have helped me. It was the best day's work I ever did when I entrusted you with a new prospectus and joined your Agency."

If you have not yet made trial of our services, we shall be glad to hear from you, with particulars of your School.

JOHN MAJOR: A SCOTTISH WORTHY.

By Professor H. A. STRONG.

ST. ANDREWS DAY, as each year comes and goes, assembles a cloud of witnesses to the greatness, the patriotism, and the humour of those who can claim to have been born in the country of that patron saint. The list of warriors, writers, and humourists cited by the national orators is as long as a catalogue of successive monarchs mentioned by Nehemiah, and it must be admitted that the worthies recited are for the most part fully entitled to an annual resuscitation.

There is, however, one most interesting personality who seems, singularly enough, to be omitted in the ordinary recitation of the Scottish Roll of Honour—John Major, Scottish Scholastic, one of the most picturesque and quaint characters of pre-Reformation times. His most important work from a modern point of view is his "History of Greater Britain, as well England as Scotland, compiled from the Ancient Authorities by John Major, by name indeed a Scot, but by profession a Theologian." This work, written in Latin, in 1521, remained for three hundred and seventy years without a translator. It was translated and edited with Notes by the late Mr. Archibald Constable in 1892, and the late Sheriff Aeneas Mackay prefixed a life of the author. This was supplemented by the late Dr. Law in an essay, proving, what Mr. Mackay seems to doubt, the absolute orthodoxy of Major's Catholicism, and the fact that John Major is the single genuine Scottish schoolman of whom Scotland can boast, for the nationality of Duns Scotus, in spite of his name, is uncertain. "He therefore," remarks Dr. Law, "if only as an intellectual fossil, a unique Scottish specimen, from certain strata of European thought, deserves reverent study from all theological antiquarians."

But he deserves to be perused by others than theologians for the many sidelights which he gives us of the times in which he lived, and as illustrating the absurdities into which the most sensible of the schoolmen were led by their first principles. Such is the following which has had necessarily to be abridged from Major's verbose language. "You must fast in Lent, and not eat flesh meat. But *exceptio probat regulam*: for in eating beans and peas you cannot but eat the *bestiolae* contained therein. Again, take the case of the beaver. He always keeps his hinder parts in the water, and his front part out of the water. Now the test of a fish is that it cannot live long out of water. The conclusion is that you may eat the part of the beaver which partakes of the characteristic of the fish, for it is admitted that this part must necessarily be in the water, or be frequently moistened, in order that the whole beast may live." What wonder that Melanchthon should write: "I have seen John Major's commentaries on Peter Lombard. . . Good Heavens! What waggon-loads of trifling!"

But it is not as a schoolman that Major claims our main interest, but as a learner and a teacher for seventy-nine years of the century which preceded the Scottish Reformation, as the tutor of George Buchanan and the fellow-student of John Knox. He was a witness of the Renaissance of learning and of the rise and progress of the Protestant Reformation, but he had no sympathy with the Humanists, and he speaks of the Lutherans in terms of absolute loathing. The liberal Catholicism of Erasmus made no appeal to him, though he saw and reprobated the scandals in his Church as strongly as the Scholar of Rotterdam. His great interest for us lies in the fact that he had resided in England, and that he gives us a Scotsman's view of the England of that day. Besides this he studied and afterwards taught in the most distinguished schools of France, and thus we are enabled to picture to ourselves something of the University

life in that country at this most interesting epoch. Above all, he is conspicuous for his earnest advocacy of the union of his own country with England, in which he must have stood almost alone among his countrymen. He dwells again and again on the advantages to both countries alike of such union, affirming that "they ought to be subject to one monarch, who should be called King of Britain, provided only that he were possessed of a just and honest title thereto; and to gain this end I see no other means but by way of marriage." By such words and teaching it may well be that he planted the seeds of a thought destined at a later date to come to a happy maturity.

Major was born probably in 1469, in the parish of North Berwick. He was of humble origin, probably the son of a small farmer of some Church lands. But even in pre-Reformation days a promising boy who took to learning or to the Church found an easy ladder for his advancement. He probably went to the school of Haddington, of which school John Knox was afterwards a scholar. He then chose the vocation of a travelling scholar, that excellent educational method of the Middle Ages, which tended to create and maintain a true republic of letters, and to keep the scholarship of one country abreast of that of the rest. At the age of twenty-three, in the year 1493, he found his way to Cambridge University, at this time a favourite resort of Scottish students. Here he was much struck by the "sweet and artistic modulation" of the bells, an unusual feature in parish churches in Scotland, even at the end of the last century and at the present day.

From Cambridge, Major passed in 1493 to Paris, which at that time contained the most famous University in Europe, especially for theological students. Its students were recruited from all the nations of Europe, from Scandinavia, Scotland, Spain. It was computed that the number of scholars was at least ten thousand, and we must bear in mind that this was at an epoch when Europe had not more than a tenth of the population it now boasts. National jealousy and the growth of Oxford and Cambridge had recently withdrawn the English students, and the Scotch who frequented Paris were now enrolled in the *Natio Alemannica* instead of the *Natio Anglicana*. Before visiting Paris he travelled a good deal in England, and some of his observations are interesting as of a contemporary witness. He avers that the population of Paris at that time was three times that of London, and that it was the business of the Mayor of London to see to the corn supply; if enough were not produced in England he had to provide for its importation. He notices that there were between three and four thousand tame swans in the Thames near London, though, with Herodotean naïveté and with true Scottish caution, he adds "I have never counted them." He reckons York as the second city in the kingdom, and Norwich as the third. Of the English Universities, he remarks that the number of students is four or five thousand in each, and that the course of study is seven or eight years before a student can graduate as Master-in-Arts. They do not pay much attention to grammar. There are more laymen (townsmen) than students, but yet the laymen do not venture to rise against the students, who would promptly repress them, as the students are all adults and carry swords and bows, being for the most part of good birth.

He praises the morals of the English ecclesiastics at the expense of those of his own countrymen, but he remarks that "for courage, prudence, and other virtues the English do not think that they are the least nation in the world, and if they meet a foreigner who has parts or bravery, 'it is much to be regretted,' they say, 'that he was not an Englishman.'" Perhaps this spirit is not wholly extinct. He refers with reprobation to the practice of jousting with the spear, which was the form taken to settle personal quarrels in England before the duel. He looks with disgust at the Christmas revels practised in England: "the days that follow their sumptuous banqueting they spend in devilish dances and lewd songs," and he contrasts the temperance of

France. He says that many of his contemporaries maintained that no Coronation should take place unless the planets were favourable. He does not agree with this view, but he admits that it is of much moment to plant trees and to prune them at full moon and to apply the knife or drugs to the human body as indicated by the signs of the heavenly bodies. He looks on Ireland as a natural appanage of Scotland, and is indignant that England should have conquered it. He regards the English as possessed of a fickle temper; their delight is to change their kings. Of the characteristics of his own countrymen, he writes that they have a singular endurance of hunger and thirst and heat and cold. They can live for a long time on the flesh of wild animals; they carry attached to their saddles a sack of meal and a griddle, on which to bake bannocks. They are a proud race; indeed, the French have a proverb about the Scots, "*Il est fier comme ung Escossoys*."

Major passed to Paris, where he graduated at the College of Ste Barbe, and afterwards taught philosophy as Regent-in-Arts down to 1505, when he graduated as Doctor of Theology. The time that Major spent in France was one of the most interesting known to history. The revival of learning, begun in Italy in the fourteenth and fifteenth centuries, had in the sixteenth crossed the Alps and, under the guidance of Erasmus, taken root in France, England, Germany, and the Low Countries. During the time of Major's sojourn in France the hostility between England and Scotland had been sharply accentuated, and the popularity of the Scotch with England's hereditary foe had correspondingly increased. Scottish students and Scottish Professors expected, and found, a warm welcome, and a career in the fair city which Major's great pupil, George Buchanan, has described in language which might pass for an encomium by Ausonius of his native Burdigala. The splendid scene burst upon the senses of the poor Scotch student, whose capital at this time contained four or five thousand houses, chiefly of wood, and whose main thoroughfare was one narrow street leading from the Castle to the Abbey.

The College of Montaigu was at this time under the principalship of John Standock, a native of the Low Countries, who saw with regret that the bursaries founded for the poor were too often swallowed up by the rich. Consequently he decided to found a college in the University for the true poor, and in order to keep out the wealthy he resolved to subject his students to a Spartan régime. Their food consisted of bread, beans, eggs, and herrings, all in small quantities; meat was forbidden. They fasted on all fast days, rose up at cock crow, and did all the menial work of the College. Erasmus wrote a scathing satire on the life of this Parisian Dotheboys Hall, at which he avers "some young geniuses were killed, others became lepers, all had their lives imperilled." Singularly enough, Ignatius Loyola, Calvin, and Rabelais were all students at this time at the Paris University. In 1505 Major transferred his services to the Sorbonne, at this time the head and centre of Roman Orthodoxy. In 1518 he becomes Principal of Glasgow University, where John Knox was one of his pupils, and after five years he passed to St. Andrews University, the oldest and, at that time, the chief University of Scotland. It was modelled upon the College for Poor Scholars at Louvain, itself a copy of Montaigu College.

To Major, while he was at St. Andrews, came, attracted by the fame of his learning, a Highland youth, the future great Latinist of Europe, George Buchanan. The pupil failed to appreciate the learning of his master, and assailed him at a later period with many bitter epigrams. These two scholars represent the parting between the old and the new learning: the old schoolman closes his epoch, the young Humanist ushers in an age of new ideas. The one is inspired by the "master of those who know," and looks on the world through the spectacles of Peter the Lombard and Duns Scotus; the other was inspired by the tender melancholy of Virgil, the passion of Catullus, the "painstaking felicity" of Horace.

In the *History of Greater Britain*, written in somewhat pompous and crabbed Latin, Major narrates succinctly the Annals of England and Scotland from the earliest times to the marriage of Henry VII's daughters, of Margaret to James IV of Scotland, and of Mary to Louis XII of France, and, after his death, to the Duke of Suffolk. He is by no means a mere chronicler, but passes judgment freely upon the characters and events of his time. It has been noticed that he is the first advocate of the union between Scotland and England, and this is remarkable enough in a Scotsman educated in France. He states that the Scotch and English alike were unwilling to favour any proposal of the kind, but he is sure that they, too, would profit by his plan, as it would cease their feuds to cease. He frequently reflects on the tyranny and want of patriotism of the Scottish nobility: Wallace, not Bruce, is his national hero.

He saw the necessity of reform in Church practices; he deploras the gross abuses of pluralities and non-residence, and is surprised that the great Scotch prelates had not applied some of their wealth to the foundation of Universities. He insists that countrymen are much stronger and healthier than townsmen, and far more capable of bearing arms. He blames the gentry on the ground that they educate their children neither in letters nor in morals—no small calamity (he thinks) to the State, and the consequence of this ignorance was that they were constant stirrers up of sedition. He affirms that the men of Rochester form an exception to the ordinary grace and beauty of the people of England, because they are born with tails; this is a punishment for the conduct of their ancestors, who, when St. Augustine preached to them, threw fishtails at the man of God, wherefore the Saint made his prayer to the Almighty that their infants might be born with tails, to the end that they might be warned not to condemn the teachers of divine things.

He is as violent an anti-Semite as M. Drumont or as a German professor. He commends Edward I for his expulsion of the Jews from England, and states that in his opinion all Governments would do well to expel the obstinate Hebrews. This anti-Semitic feeling was very prevalent during the Renaissance, and the Church fully sympathized with the State in its horror of usury. Indeed, the invention of banking, due as we know to Venice and Lombardy, was aimed at organizing wealth and making the State, and not the usurer, the lender.

Major is very much struck with the admirable ale brewed from barley in Britain, as contrasted with that brewed on the Continent; it is plain, he says, that wine has not the property of producing so strong a race of men as British ale. He states that oaten bread is the food of the Welsh, the Northern English, and of the Scottish peasantry, and that the main strength of the armies of both of these nations is in men who have been tillers of the soil; a proof that oaten bread is not a thing to be laughed at. Referring to the price of provisions, Major assures us that for two francs a large ox may be bought in the northern parts of Scotland, for five or six sous a ram, for six or seven pieces of Tours a fat capon or a goose. In the north of Scotland the best of fish may be had for next to nothing. There, too, a horse, ready broken, may be bought for two francs!

The numerous *obiter dicta* of the scholar-historian render his history peculiarly interesting, as illustrating the state of his country and of England during the sixteenth century, and these and his quaint style should appeal to a generation urged by science to know the way of life of their ancestors.

CAPTAIN GERALD RIVINGTON, junior partner in the firm of Rivingtons, has relinquished his commission on account of ill health. He joined the Border Regiment in September 1914; in November 1915 he went with his regiment to France, and in March 1916 was invalided home.

A BOYS' SCHOOL IN JAPAN.

By W. N. P.

[INTRODUCTORY NOTE.—The writer of the following article is the only foreign teacher in the large boys' school to which it refers. The school is graded into first, second, third, fourth, and fifth years, and each year is divided into three parallel classes—A, B, and C. He teaches English in the second, third, and fourth years; an informal gathering of a few fifth year students meets once a week privately for reading. Occasionally walks are arranged with the elder boys, when only English is spoken. A Japanese teacher is attached to each class, and is generally present at the English lesson; he is supposed to maintain discipline, and to prepare the pupils for their next English lesson. Ten minutes' recess is allowed in each hour of school work. There is no system of marks. The second-year students are about twelve years old, and the entire classes move up year by year into the grade above. Standard Government textbooks are supplied, but, as the writer of the article describes them as "rather trashy," he takes every opportunity to vary the teaching by story-telling (which the pupils endeavour to reproduce in writing), conversation, questions, and short informal essays or sentences, of which several are adduced. Questioning is a very lengthy business, and must require much patience, as the following extract from a letter shows:—"I ask one boy something; he stands up (quickly or slowly, according to temperament), looks up at the ceiling with a dreamy ghost of a smile—'Now, am I going to think of this?'—then down at the floor with a slight frown; then he glances politely round for any hints or suggestions from his neighbours; then he catches my glassy eye fixed sternly on him, and he breaks into a bewitching smile, says 'I-do-not-know,' and sits down again." And the writer's final conclusion is thus expressed: "Teaching Japanese boys is an adventure!"]

THE school is one of the class known in Japan as Middle Schools, and the course is for five years. It stands on the bank of a small river, which is generally nothing more than a trickling stream, the buildings are all of unpainted wood, and there is a good-sized playground attached. There, at eight o'clock in the summer, half-past eight in the winter, some seven hundred boys gather clad in khaki uniforms, nickel buttons, white leggings, and a smile, each carrying his books tied up in a white handkerchief and an inkbottle dangling on a string. Thither I, too, the foreign teacher, on certain mornings turn my steps, for my duty is to instruct them in English.

To one who has had no previous experience of teaching in Japan the school is full of surprises. Boys of widely different social classes meet on the same level, sons of millionaires, perhaps here and there one with a title, while many are so poor that they get up early and go round delivering milk, in order to earn enough money to pay their school fees, for in this country they are robust enough to pay their own way, without expecting the public to do it for them. On one occasion, I remember, I noticed a new boy in one of my classes with bright, sparkling eyes and a new uniform. I asked the Japanese teacher who he was, and was told he had been in the school a year before, but had left and gone to work in order to save enough money to continue his school course. Yet, as far as my observation goes, they all seem to be equally clean, clear-eyed, and courteous, for it is noticeable that, though their teacher rudely calls them by their unadorned surnames, they call each other Mr. So-and-so. Another surprise is that there are practically no punishments. The worst, except expulsion, which is very rare, is that the offender is called into the teacher's room and lectured, during which he stands in a dejected attitude with head bent, looking the picture of woe. At first I wondered how discipline could be maintained under these conditions, but only once have I experienced what I thought to be disrespect, and then I found

I was mistaken. I had initiated the learning of English repetition, and, as this involved extra homework, it was not received with enthusiasm. One week several boys had not learnt it properly, and one made what I thought was an excuse, saying that he had not had a copy of it and so could not learn it. I determined this should not occur again; so after school wrote it out and sent it to him. The next week he not only knew it perfectly, but came up surrounded by several of the elder boys and presented me with an original poem of his own by way of apology!

There are forty boys, more or less, in a class, and each one sits at a combined desk and chair. When work is about to commence the teacher, coming along the long passage with windows on one side and classrooms on the other hand, hears a confused din coming from his particular room; but the moment he enters the head boy raps out "Ki wo tsukete!" (spirit fixing—i.e. attention), clipping his words like a drill sergeant, and each boy stands beside his desk at most strict attention, heels together, thumbs on the trouser seams, and eyes fixed in a stony stare, while the teacher proceeds in dead silence on to his little raised dais. When he has turned round and faced them from behind his table the leader again raps out "Reihai!" (worship or bow), they all bow, he returns it, the boys sit down, and work begins. One very striking fact is that the younger boys are much brighter and quicker than the elder ones. Their little black eyes sparkle, and they are on the jump all the time to be allowed to get up and answer. Several can talk with their eyes, like a dog, and, if they don't know the English word they want, can still make themselves understood; and some blush at the least word of blame or praise. One small child (little does he know it) has occasionally got unmerited praise that his teacher might watch the hot blush that was sure to follow. Moreover, they all possess the most bewitching smile, which might soften the heart of a Hun, if there is such a thing.

From time to time I request them to write English composition, and perhaps a few extracts from their papers will give an insight into their minds. I give only a word or an idea, and they are to write what they like about it:—

"A horse is indeed a good animal for men. But he kicks men from time to time when he is angry. So I did not like him as much as a ox."

"There is a baby near my house. It is a very small child and weep all the day. Sometimes it opens its eye and is watching. What thing does it watch?"

"When I got up from my bed I saw it was raining very hard, it was indeed very noisy. Our cat was sleeping and did not go out. In my room was very dark and my head was sore. I am not fond of rainy weather."

"When I am ten years old I am taken by one of neighbours to chase dragon-flies. I fell a marsh and I said 'Help, help!' Afterwards I am helpt (I think this is the past participle of help) by him. The marsh is full of mad and dirt. Dont think this short story is lie, I am telling truth."

"School boys is put on a cap, a trouser, a shoes, and they go to school every morning and study English, Japanese, Algebrura."

"Once I went to Rokko San. As I was wandering about there I met an Englishman coming down and the man said 'Which road may I take to Iwaya?' As I could not speak English well I said 'This road is very bad.' The man laughed in gree."

"I saw a dewdrop leave a leaf. The dewdrop sparkled in the sunshine and then the dewdrop dropped before the wind like a child's tear."

"I have seen dewdrops shake in the moonshine. It is very beautiful the sight when dewdrops are shaking."

"Once I saw the zoo at Suma Park. I took my brother with me. When we came up to the tigar, brother said, 'Oh, brother, dash it all,' and at last he began to cry so hard that I did not know what to do. So I took him to the cranes, he laughed very funny. I was very glad to see

this. After he got home he did not tell that tigar to our father and mother."

"Once I went to Arima. When I went there the village was decorated by the dawn star. It was very bright."

"I said 'I will study hard in the coming New Year.' The New Year came, but I did not study."

"Once I went to Sumadera and floated a boat on the pond. I rowed it with two oars and it made a path through the water rolling. I stood up in the boat and sang a song loudly. A boy who was fishing lifted up his face and looked into me. I, too, looked at him. Oh, sir, who do you think he was? He smiled and I also did. Indeed, he was my dear friend Isuruta."

"Once I went to the mount of Oe, that day was the stormy day. Rain was falling very hard and wind blowed with roaring. We could hardly stop to cry. When the night came we had no sheltered place. We felt cold and around us we can find nothing. Most and most the storm was hard. Again and again our harts was stood still with fright. Once we cried loudly, and once we ran, and once " (he had not time to finish it).

"I got up early this morning about five o'clock and I first opened the doors and looked round and saw a beautiful sight that never can write or paint. It was the morning mist with sun rays. I wanted very much let our teacher see this sight."

"When I wake up to-day the sun was riseing. I cried in a low voice 'Banzai!' My heart was very fine."

"At sunrise when I stood towards the sun I breathed very quietly."

"My father very fond of chrysanthemums, and so he bought this flower every autumn time and enjoyed it; but alas my father have gone though his favourit flower still now is blooming very beautifully."

"In the Meiji period there is a saint named Nogi. He is reary a good holy knight. I know that he get up early morning and know to love his horses. But now he is not in Japan nor in the world. He followed our Meiji Emperor and killed himself. Oh great holy General Nogi!"

"Once I saw a fox which was caught in a trap. It looked like very sad and did not eat nothing, but it cried for it thought of its father and mother. I also thought of our parents and gave a piece of bread."

"In the vacation of this year I draw many pictures; these were a dog, a aeroplane, a car, a teacher—who? and a drummer boy at war. I showed them father; father smiled and said 'All of these I think this the best picture of drummer boy.' So I pined it at the wall of my room. Each time when I was tired in studying I use to see this picture and get a great joy, for though it was not quite good yet it was drawn by me."

"When I first wore my uniform, how my eye and my nickle buttons lit up! The little plain boy treads like a conqueror. But it seems like yesterday. Now my buttons are no longer shining and a dark cloud covers them. I wish I were a boy at the first day in our school for ever."

The annual school athletic sports were recently held, and some of the events might prove amusing novelties at similar gatherings in England. For instance, the boat race; in this there are three boys for each "boat," two run backwards way with eyes blindfolded, and the cox facing them with mouth muffled in a handkerchief, steers them by two Scout poles, one on each side, which they hold in their hands. The tied-foot race is a variation of our three-legged race, for it is run by sets of three boys, one behind the other, with hands on the shoulders of the one in front, and with all right ankles tied together, and all left. The heavy-foot race is run with a brick firmly tied on to each shin. Another amusing race is run sideways by couples of boys back to back, with arms linked. The attack-and-defence game is much fiercer, and requires a large number of boys and a length of rope with the ends joined; fifty or one hundred boys inside hold it up and try to keep it ring-shaped, in

order to protect their captain, who stands in the middle wearing a red cap. The attacking force then try to crush in the ring, so as to reach the captain and snatch off his cap. In another somewhat similar game, requiring many boys, two strong poles, some 12ft. high, are set up with a red (or green) flag on each. The boys, dressed in shorts only, cluster round their respective poles facing outward, while the biggest and strongest of each side attack the other position, trying to climb over the defenders, up the pole, and to tear down the flag. In both these latter games almost anything seems to be permitted, except hitting with the clenched fist. A doctor and nurse are present, but seldom have more than skin abrasions to attend to. In the military race, all boys start dressed in nothing but shorts, and at different intervals trousers, coats, boots, socks, leggings, caps, belts, rifles, and bayonets are laid out, and they must put them all on and arrive at the winning post with every button and lace correctly done and bayonet fixed. A variation of the obstacle race is to divide the runners into groups of three, of whom two carry the third on a pole, so that they cannot proceed to the next obstacle until all three are safely over the last.

These and many other sports and races filled in a long and sunny day when all did their best, for there is no giving in, each boy finishes to the end of the course. But what remains clearest in the teacher's memory is the display of physical drill by some three hundred and fifty of the smallest boys, dressed in white shirts and shorts, in extended order, each watching for the faintest flicker of an eyelid of their instructor and executing every movement with mechanical precision almost before the word of command was completed. "He who talks does not know; he who knows does not talk." The Japanese don't advertise their system of education.

IN PRAISE OF TEACHING.

IT is a good thing to be a teacher. It is good also to look back to discover what it is in teaching that makes for happiness. The chief factor, I suppose, is that teaching is based on humanity, it is permeated with human interests. Moreover, the human nature of the young has all the fascination of incompleteness and promise. The future is foretold in hints and flashes of latent tendencies; the fresh life is on the brink of some destiny—momentous or mediocre. Somehow there is to most observers a romantic element in the hidden future which awaits all young people. To look at a class of girls and think forward comes upon one with the same mysterious delight as the opening of the pages of an unfamiliar book.

As with reading, teaching lifts one into a new world. It is compulsory to take an interest in every type presented in the classroom; otherwise no teaching will succeed. Most people pick out from life those personalities which appeal to them, but the teacher cannot be fastidious. She is forced to study girls so opposed to her in temperament that in almost any other relation of life they would be ignored or avoided. She cannot specialize in types; all are there, and all—to a greater or lesser degree—must be considered. So there comes about a meeting of natures otherwise uncongenial—the timid and the frank, the brilliant and the stolid, the calculating and the æsthetic, the conventional and the flippant, the spiritual and the material. From this contact there may arise repulsion or discomfort, but also, in many cases, an unexpected sympathy. In the absorption of this human science the teacher loses sight of her obtrusive self, she escapes from introspection into the freedom and variety of a fuller life encircling her own.

Perhaps she teaches literature, and then for her there is a wider opening of the great book of life. Almost everything that is really great in literature lies within the grasp of intelligent, sympathetic girls. They are led by intuitions which will in after years be deepened by experience. From an educational point of view the only really difficult subjects are love and religion, and these are not impossible subjects. Girls do not, and should not, apprehend love as a question of sex. When it is so treated in literature they laugh or they are morbidly moved to emotion, and either tendency is unfortunate. But they are quite capable of understanding love in so far as it is a matter of loyalty and truth. To the religion, the awe, and the mystery of which poetry is full they make an instant response; but when poetry becomes philosophic and intellectual, when it loses warmth and tenderness—when, in fact, it ceases to be poetry—girls cease to pay attention. Great poetry hardly ever fails to win their recognition. They may not understand all that it means; but they can feel that they are standing on holy ground. They are impressed by a beauty and a nobility set high above their own thoughts, high and yet familiar; something inarticulate within them responds to the beauty that passeth understanding. Country-bred girls while reading Wordsworth are happy, vaguely conscious all the while of the depths which underlie his serenity and freshness. It is amazing to find how many schoolgirls of quite ordinary ability will confess to having read *Hamlet* for pleasure.

Teaching literature to girls brings it into contact with reality, and there one can revise or confirm previous standards. The healthy spirit of youth is against all affectation or weakness of emotion. The young appreciate whatsoever things are wholesome, brave, sane, or loyal, for they partake of these virtues. It may be that literature is best known and best loved by those of exceptional or refined temperament. But it is also true that literature often takes for its theme people who are neither exceptional nor refined; it deals for the most part with the doings and feelings of ordinary people. And here are a number of ordinary girls, each with her own opinion of that literature! Ordinary people should be able to recognize their own portraits. If a normal girl finds nothing arresting in a book about normal people, very probably the fault lies with the book. For the normal girl is interested in normal people when she can see them clearly, and literature should make them clear.

These are some of the joys of teaching literature. But teaching in itself is a sort of literature brought into practice. It is the reading of a book—not of paper, and ink, and cloth—but of human minds. The reading of this human book has about it a pressing significance. An uncharitable judgment of a poem or a play hurts nobody, unless it be the incompetent judge; but who shall say the same for uncharitable judgments of real people? The reader may be unjust to Ophelia or to Becky Sharp—they are none the worse for it; but injustice to the stupid or to the defiant girl in the back seat is something more than a trifle. There can be nothing detached or impersonal in this study; the teacher reads, judges, and acts upon her class. The reader of a novel is a theorist, standing outside and looking on. The teacher of a class becomes a part of an actual story—a part which must have some share, however slight, in creating the whole.

M. A. B.

SECOND LIEUTENANT A. B. MARSTON, of the 7th Battalion Royal West Surrey Regiment, son of Mr. R. B. Marston, editor of the *Publishers' Circular*, was reported as wounded in the Somme battle on July 13, and so far nothing further has been heard of him. Mr. Marston's many friends hope that he may soon receive better news.

MESSRS. GEORGE PHILIP & SON, LTD., 32 Fleet Street, E.C., notify that they have purchased the old-established business of C. Smith & Son, Ltd., globe makers and map publishers, founded in 1799.

SCHOOLGIRLS IN INDIA.

THE similarity of certain difficulties connected with the teaching of girls in India and in this country is very striking. Teachers of certain classes of English girls find that some of their pupils are very bright and come on remarkably fast at first, but after a time they seem to grow dull and incapable of much brain effort. This is true, too, of Indian girls, and is more generally seen than in England. The school which the writer has in mind is one of the largest in India, and is situated in one of the healthiest parts of the country where, perhaps in all India, public opinion and social customs offer least hindrance to the education of girls. One who has worked in India will appreciate the greatness of these advantages. When in addition the girls come of a race noted for its freedom, intelligence, and gentle manners, then, indeed, it will be understood that the work of teaching is being done under the most favourable conditions.

Fifteen years ago the most noticeable feature of this school was its large primary classes and its small secondary forms. The next thing that struck one was the youthful age of the children in the lower classes as compared with their seniors; that is to say, there was more than six years' difference in age between the children of Form I and those of Form VI, pointing obviously to the loss of a good deal of time somewhere in the course of a girl's progress through the high school; and the third point which did not appear on the surface was the apparently disproportionate difficulty the more advanced work seemed to present. The conclusion was not long in forcing itself upon one that the Indian child was not able to maintain the same level throughout her school career; that somewhere there was a falling off in steady progress. Was this a natural incapacity, to be accepted as such without any further question? The needs of the school demanded an inquiry. Cause and remedy were the two problems to be faced and solved.

Many causes suggested themselves: this was practically the first generation to have their minds and bodies subjected to long hours of school discipline and mental training; the rice diet, which sufficed for the light duties of an Indian household, with many hours of inactivity, was proving insufficient for the new life; the school curriculum and timetable, arranged after the usual English plan, gave too much brain work. For the first there could be no remedy; the second, on account of caste and prejudices, could not be interfered with. There remained the third, and, as that was a matter that could be dealt with by the school authorities, no time was lost in rearranging the time-tables with a view to lightening the strain and introducing variety and brightness into the day's work. No two exacting subjects were allowed to follow each other; great use was made of drawing, needlework, singing, drill, and practical lessons in botany, geography, &c.; teachers were encouraged to give their classes a lesson out of doors occasionally, and to introduce illustrative methods of every description—pictorial, dramatic, or musical. The above does not enumerate the changes, but gives an idea of what was done. The results were quickly seen. The following changes were noted in the course of the last five years:—(a) The average ages of the children in Form I and Form VI varied thus: From 11.7 and 17.5 to 11.6 and 16.5.

The table below shows further results. The figures are given on a basis of one hundred:—

Form.	(b) Declared fit for Promotion at the end of the year.		(c) Left School in the course of the year.	
	Six years ago.	Last year.	Six years ago.	Last year.
I	34.5	85.6	23.1	.05
II	41.3	67.9	40.8	.05
III	38.5	65.9	23.7	.08
IV	28	65.1	8	.07
V	50	56.8	6.2	.98
VI	11.1	33.3	4.8	.06

These figures are encouraging, but not sufficiently good. One might argue from them that:—(a) A greater number of children now go straight through the school without spending more than one year in a class; (b) the quality of the work has improved; (c) the feeling of inability to keep on which prompted so many to leave school in the middle of the year has practically disappeared.

Having arrived thus far, one cannot rest satisfied with the descending grade in the quality of the work from Form I to Form VI, as shown in Table (b), but feels that a further study of cause and remedy is necessary to attain a still higher ideal. Close observation has shown that the most difficult years are those spent in Forms II and III, where the average age is between twelve and fourteen. These years are difficult to both teachers and pupils. To the teachers the children seem restless and unmanageable; unwilling to learn, unable to settle to anything, incapable of being interested; to the children the discipline of the school is irksome, the hours are long and wearisome, the tasks onerous and unreasonable. This is usually the first stage, and is generally followed by one of lassitude and apathy. Some children seem never completely to recover from these symptoms, but others grow quite bright and willing and amenable again.

The cause once more would seem to be physical. The period of trouble coincides with what is popularly known as the growing age, and it stands to reason that the mind and the body cannot be strained at the same time. The one must be allowed to rest while the other is given every chance to develop into sturdy, capable womanhood. The remedy provided must therefore take into consideration the necessity not to overtax the brain, to provide an outlet for physical restlessness, and to prevent the formation of habits of idleness at the most susceptible age of a girl's life.

There is a general feeling that the present system of education for girls in India is unsatisfactory—that it neither attracts girls to school nor fits them for the battle of life; it is too intellectual, and the time is not ripe for an extensive higher education, which is prized by the very few and wholly disregarded by the great majority. Every Indian woman, rich and poor alike, is her own housekeeper and child's nurse; she has few social interests, her whole attention is devoted to her home. The time to be spent in school is short, for though the marriage age has been advanced, most girls are still married between the ages of ten and fifteen. The form of education that is wanted is one that will give a girl more practical training to fit her for the home in the position of wife and mother, that will provide her with resources to fill in her spare time, and that can be rounded off at about the age of fourteen or fifteen, at the same time affording her the opportunity to pursue a course of higher education if she is so inclined and her circumstances permit it.

The last-mentioned requirement seems to point to a vacillating and desultory inclination on the part of parents with regard to the education of their daughters. This is precisely what is the matter, and the reason why the girl pupil must be led on, even enticed forward, at every step towards a definite goal, and if for a long time many do not go the whole way to a final goal, it should be possible for them to find an intermediate stage at which they may call a halt with advantage to themselves.

The remarks just made should not mislead the reader into thinking that no desire for higher education is to be seen in India. On the contrary, it prevails so strongly that the Government and missionary bodies have recognized the need, and several colleges intended solely for women are now doing good work. These, however, form a very small minority, and are to be found chiefly among the Christian communities, while it is the great majority of the non-Christian peoples which the writer has in mind.

The solution of the double problem would seem to lie in a scheme that combines the following elements: Intellectual, artistic, and domestic training; a curriculum ter-

minable half-way through at will; a pause for bodily development and mental rest. It ought to be possible to plan and carry out a curriculum that, till the age of twelve, would be intellectual, artistic, and domestic, and in a degree elementary—e.g. the subjects might be reading and writing in the mother tongue, simple arithmetic, English by the direct method, singing, drawing, physical exercises, needlework and knitting, Nature study (taught practically), lessons on personal and domestic hygiene, and in addition, in the earlier stages, some of the kindergarten occupations to develop finger dexterity, and in the later stages elementary history and geography chiefly of their own country. Between twelve and fourteen a twelve-months course in active and practical domestic training might be given with literary readings two or three times in the week. The subjects might be hygiene of the home and domestic economy, practically taught, including, besides all things in house management, invalid and ordinary cooking, laundry, first aid to the injured, and elementary sick nursing, care and training of the baby, vegetable and flower gardening, care of cattle and poultry, account keeping, investment of savings, needlework (plain and ornamental), drawing, painting and designing, singing and physical exercises. This would make a good termination for those who do not care to proceed to a high-school certificate. A girl so trained may well be expected to run her house on intelligent lines, look after her husband and children in health and in sickness, and find interesting relaxation for herself in her needlework, drawing, garden or poultry yard, as her taste leads her.

In the next stage those girls who wished to continue in school could easily follow the usual high-school course as it exists, and, with minds rested and bodies invigorated, do their work well.

D. H. W.

RUSSIAN GRAMMARS AND READERS.

IF the demand for textbooks for the use of Russian students has much increased since the beginning of the War, it is satisfactory to find that this demand has produced a plentiful supply of first aids to learners of the Russian language, and it is a pleasure to note that all the textbooks which have come under our notice are well adapted for the end which they have in view—viz. the enabling English-speaking students to gain a fair knowledge of Russian without the aid of a Russian teacher. It must, however, be insisted on that there are in every language certain sounds and inflections of the voice which can be acquired satisfactorily only by the aid of a native of the country whose language is to be learnt, and this applies more to Russian than to most European languages. It is, too, satisfactory to note that many more Russian teachers are to be found in England than previously to the War, and that Chairs of Russian are being founded in our local Universities, and these have in some cases attracted a great many pupils who wish to acquire Russian for commercial purposes. But before our Russian students can claim to be properly equipped for attacking the language which they desire to master, it is necessary that they should be provided with a good Russian dictionary, which, unfortunately, does not exist in this country. Alexandrow's, which is usually considered the best in our language, is very unsatisfactory and imperfect. A fine opportunity is open to any good Russian scholar to fill this literary gap, and he would gain the gratitude of all the Russian students in the English-speaking world. The dictionary, to be of use to students, should set down not merely the different aspects in use of every verb, but should give the future and the irregular forms. It would also be of great use to classical students if a good philologist would collaborate, and set down after each word

the root common to it and to the classical tongues. Many such roots exist, but they are not all obvious at first sight, but, when the connexion is perceived, it enables the student to remember the meaning with a less effort of memory and at the same time gives him an interest in the philology of Slavic, Latin, and Greek. It would also be an advantage to English students if a few entire interesting stories could be brought out on the model of those published in the *Russische National-Bibliothek*, edited by Manassewitsch and Fischer. In these books an interlinear version is published in German beneath the Russian. This is the plan adopted in Colonel Jamieson's *Line-upon-line Russian Reader* (Kegan Paul). It seems to the writer that the transliteration of the Russian letters might well be omitted in any future edition. The learner should have mastered this before beginning to read connected stories. A more exact account, too, should be given of the value of the English letters employed to represent the Russian. The effect of the soft sign at the end of Russian words should be noted and illustrated by instances drawn from French, or else by a sign from the phonetic alphabet. The Russian *e* should be represented by *ye*, and not by *e*, and the sound of softened *t*, as in *rissovat* (to draw), should be noted either by a comma or by the addition of *i*. If the whole of the transliteration were either omitted or reconstructed phonetically, the value of Colonel Jamieson's *Reader* would be increased. The pieces of Russian are well chosen, and whoever has mastered these will have mastered all the words occurring in ordinary conversation.

The Concise Grammar of the Russian Language, by L. A. Magnus, LL.B. London (John Murray, 1916), is clear and well arranged. The aspects of the Russian verbs are very lucidly explained, and the learner will find the advantage of reading this section with particular care. It might be useful to point out that these "aspects" occur in other languages besides Russian—e.g. *esurio* is but an "aspect" of *edo*, and so is *vivotter* of *vivre*. Mr. Magnus's *Grammar* is printed in beautifully bold type, and should be useful even to the advanced student.

We are glad to see that the Oxford Clarendon Press has a fount of Russian type, as is evidenced by *The First Russian Reader*, from L. N. Tolstoy, with English notes and a vocabulary by Percy Dearmer and Vyacheslav A. Tananovich (Clarendon Press, 1915). The notes to these short extracts are precisely what the learner needs. The authors claim that "this *First Russian Reader* consists of the easiest little stories from Tolstoy (who was a master of style even in his shortest and simplest writings), duly accented, with notes unblushingly redundant, and a vocabulary which it is hoped contains every single word used in the text." This claim seems to be perfectly justified.

The Self-Educator in Russian, by Louis Segal, Ph.D. (Hodder & Stoughton, 1915), contains both a grammar and easy exercises on the rules laid down. The exercises are particularly well arranged, and the author's statement here again seems justified that "the student will find what he has learnt in this book to be of great value to him in speaking." The alphabet, however, in this book is very poorly printed, and a list of letters as they are represented in Russian writing should be added in another edition. It should be added that the conclusion of this work gives some excellent advice to the student of Russian as to the works in that language which it will be best for him to study.

But any earnest student of Russian, while thanking the authors and editors of the many books now being turned out for his use, must perforce hope and pray that some literary saint may turn out for his behoof a satisfactory dictionary. The small dictionary by Freese, just published as this article goes to press, is very satisfactory for beginners, but not nearly full enough for advanced students.

H. A. S.

MESSRS. T. NELSON & SONS announce that, owing to the increase of cost in every branch of manufacture, they have been compelled to raise the price of certain of their books as follows:—"Nelson's Library," to 9d. net; "Nelson's Classics," to 9d. net; "Nelson's Shilling Library," to 1s. 3d. net.

THE NEW DEGREE IN EDUCATION AT EDINBURGH.

THERE is probably no institution that exists for the propagation of higher education in Britain so completely under the nominal, if not actual, control of the primary and secondary educational authorities, national and individual, as the University of Edinburgh. The Scotch Education Department, the Carnegie Trust, and the local Provincial Committee for the Training of Teachers—all not only claim, but actually exert, a very considerable amount of influence upon the University Court and Senatus so far as they are concerned with questions of administration. Whether the University has chosen to sell her birthright to these bodies for the proverbial mess of pottage is perhaps such a debatable question as need not for the present detain us here; but, while the association of these various bodies has certainly not been altogether for the best interests of the University, whatever it may have been for the others, one good thing it has at last been the means of bringing about, and that is now upon the very point of attaining maturity, chiefly, as I have said, as the outcome of the partnership.

A degree in education is a matter which, in the Scottish Universities, has been long overdue, and the draft Ordinance is now so far advanced that it has actually passed through all the necessary stages, and awaits only the signature of His Majesty in Council to enable it to become operative as from the beginning of the coming session—viz. in October 1916. It will now be possible, therefore, for students in the University of Edinburgh to proceed from an Arts, or a Science, to an Education, degree, in place of the mere diploma which up to the present time has been the highest recognition of a student's attainments in the Theory and Practice of Education that the University has had the power to confer.

The new degree is an Honours one, only those who hold an Arts or Science degree from one of the Scottish Universities, or a like degree (or certificate equivalent to a degree) from some other approved University, being allowed to take it. It is to be known as a degree in the Theory, History, and Practice of Education, and will be a Baccalaureate—viz. Bachelor of Education. The course of study for it shall extend over not less than two academical years, and these shall be in addition to the minimum number of years prescribed for the preliminary degree in Arts or Science.

The following courses of study for the new degree have been approved, and they must all be passed in not more than two examinations, the first three to be taken at the first examination and the others at the second:—(a) a course in Elementary Psychology, extending over at least seventy-five class meetings (with additional tutorial hours); (b) a course in the Theory and History of Education, extending over at least seventy-five class meetings (with additional tutorial hours); (c) a course in Modern Educational Systems and Problems, extending over at least twenty-five class meetings, or any equivalent course of instruction instituted by the University Court after consultation with the Senatus; (d) an advanced course in Psychology (including laboratory practice), extending over at least fifty class meetings; (e) an advanced course in the Theory and History of Education, extending over at least fifty class meetings; (f) an advanced course in Experimental Education, extending over at least fifty class meetings, or any equivalent course of instruction instituted or approved by the University Court after consultation with the Senatus; (g) a course in the Administration and Organization of Primary and Secondary Schools, extending over at least twenty-five class meetings, or any equivalent course of instruction instituted or approved by the University Court after consultation with the Senatus.

These courses for the Education degree are, however, subject to the following modifications:—

I. A candidate who includes (a) (Elementary Psychology) in his course for graduation in Arts may be exempted by the

Senatus from taking that part of the course for graduation in Education.

II. Courses (b) and (c) must be taken by candidates in addition to their subjects for graduation in Arts or Science, and not earlier than in their fourth year of University study. A candidate who has already offered Course (b) (Education) as a subject for the degree of Master of Arts will be required to take an additional Arts course not earlier than in his fourth year.

III. Courses (d), (e), (f), (g), unless in cases where (d) (Advanced Psychology) has been taken as a subject in the Honours group of Mental Philosophy, must be taken by candidates not earlier than in their fifth year of University study, must be taken in addition to their subjects for graduation in Arts or Science, and must be taken after graduating in Arts or Science.

IV. Courses (a) to (e) (inclusive) must be taken at the University of Edinburgh. The University Court may recognize as counting *pro tanto* for the purpose of graduation under this Ordinance courses (f) and (g) conducted at a recognized training centre or college, provided that, after consultation with the Senatus, they are satisfied that such courses are equivalent in scope and standard to courses in corresponding subjects conducted in the University of Edinburgh, and upon the condition that the syllabus of instruction and the qualifications of the lecturers engaged be approved by the said Senatus and University Court. Provided further that the fees for attendance on courses at such recognized training centre or college shall not be less than the fees payable for courses of a corresponding nature in the University of Edinburgh.

An invaluable section also is the following:—"Before being allowed to enter for the first examination every candidate must produce evidence that he has attended a course of professional training at a recognized training centre or college, and that he has attained therein to a satisfactory standard of proficiency as a teacher; or, in lieu thereof, that he has taught with success for not less than three years in one or more schools or educational institutions, approved for this purpose by the University Court after consultation with the Senatus." This requirement raises the standard of the degree to an infinite height, and confers upon it an intrinsic value of very considerable magnitude.

Lastly, the fee for admission to examination for the degree of Bachelor of Education shall be £6 6s. in all, but, if a candidate is admitted for re-examination in any of the subjects prescribed, the University Court is empowered to charge such a fee as it may deem reasonable for such re-examination. And another point which, for professional purposes, confers a still greater value on the degree is the regulation that "The degree of Bachelor of Education shall in no case be conferred on persons who have not complied with the conditions hereinbefore set forth, and shall not be conferred *honoris causa tantum*."

Such in outline, then, are the provisions that must be fulfilled by candidates for the new Edinburgh degree in Education, and, if in some respects they are a little exacting, the results will be all the more appreciated by the various governing boards of educational institutions throughout the Empire, and teachers and others possessing the degree will no doubt very soon come to be recognized as persons equipped for the exercise of their profession to an extent not only above the average, but in excess of perhaps any other teacher in the market. At all events, the degree will not be in any respect inferior to any other educational degree or diploma whatsoever of which I at least have any acquaintance, and I have for several years now made a most careful study of the conditions prevailing in most, if not all, of the British, French, German, and other Continental Universities. All who are interested in the practical side of educational matters will therefore be well advised to keep a watchful eye during the next three or four years on the working of this new Edinburgh Ordinance.

A MATHEMATICAL CLUB IN A GIRLS' SCHOOL.

By I. M. BROWN, B.A.

I AM afraid it is a fact that most schoolgirls regard mathematics as a necessary evil, or at best as a subject in which they may fairly easily satisfy Matriculation examiners. The reward of matriculating successfully is the farewell to all mathematical work. "For," they ask, "what good do I get out of all this?" We explain that the study of mathematics affords an excellent training in logic and accuracy. But this is not nearly so satisfying to the questioner as was Euclid's classic answer: "Give him a copper or two, since he must make a profit out of what he learns."

Now why is this old question an ever new and vital one? It is because the lighter side of mathematics is seldom or never put before the girls. It is easy to show that the other school subjects—history, modern languages, botany, &c.—make a substantial addition to our pleasure in life. For instance, every girl will enjoy her general reading the more because she understands historical allusions and can recognize quotations from the classics. But, when mathematics are brought into touch with our everyday affairs, the connexion is usually a financial—or, at any rate, a strictly useful—one. The non-mathematical girl can get through life with very slight acquaintance with figures. Of course she can, but she will miss a good deal of interest and pleasure. No one denies the utility of mathematics, but a great many like others to possess the necessary knowledge. There is always someone else who will do your calculations for you; your broker will invest your money, the upholsterer will give an estimate for carpeting your room and staining its border, and the grocer will make out your bill.

Now, I am quite sure that a really human interest may be aroused in mathematical work. It was with this idea in my mind that I started a mathematical club for upper-school girls. We stated that the object of the club was "to show the fascination of mathematics and to explore the by-ways." Our first meeting was crowded. Girls from every eligible form presented themselves. I think it was curiosity that brought most of the would-be members—curiosity as to what new light would be shed on this dull subject, so that the hitherto unsuspected fascination might be discovered.

In that first year of the club's existence, some girls made accurate models of solid geometrical figures. Some worked Boule curves; generally they made their own plans for these instead of using the ready-made designs which can be bought. A few members adapted these curves to decorative needlework. Other girls made graphs of the rarer curves, such as cycloids and spirals, whilst a few drew large illustrations of groups of simple lines and curves for us to use in our lessons to beginners. We all worked together and helped each other when necessary. Sometimes girls brought puzzles to be solved, and we kept a record of these and their solutions.

After a few weeks of this work we varied the program, and two elder girls read papers on Dr. Abbott's *Flatland*. These papers gave rise to much discussion on the difficulties and restrictions of life in Flatland or Lineland. A good many diagrams were drawn to illustrate the points raised. The rest of the school was by this time asking what the club did in its meetings. So we decided to invite the upper and middle schools to an open meeting and let them judge our work and say whether or not they found it fascinating. We wrote a short play founded on the above-mentioned *Flatland*. There were six scenes and a prologue. The prologue performed the part of the chorus in a Greek play and introduced the characters. We made most charming programs, each with a diagram illustrating a scene in the play.

The preparation of these programs and of the various properties required took all the time at our disposal for a few weeks.

When the appointed day of performance came, we set out all our models and graphs, &c., and the staff and girls were invited to inspect them. Meanwhile, we prepared our stage in the big hall. The floor was the stage, and the audience looked down on the players from the gallery. Judging by the frequent bursts of applause, the audience enjoyed itself quite as much as did the players. Even the youngest could recognize the geometrical propositions illustrated in the Flatland children's games. Everyone appreciated the discomfiture of the Flat schoolmaster when he was unable to answer the question put by a promising pupil: "What will become of a square if you move it in a third direction?" And the mystic appearance of the sphere and cube within walled rooms with closed doors brought shouts of applause. The object of our club seemed to be fulfilled. We, with a purely mathematical program, had amused and entertained the school.

In the following session we divided ourselves into three groups. One of these compiled a manuscript, or rather a typescript, book of mathematical puzzles and anecdotes. The second group searched encyclopædia and books of all sorts for stories of mathematics, and, finally, a volume of *Lives of Great Mathematicians* was completed. The third group wrote a history of arithmetic from earliest Babylonian times to the present day, paying special attention to the simplification and quickening of methods and notations. Each of these books had many illustrations.

At the end of the spring term we held our second open meeting, to which we invited the upper school. There were three parts to the program. In the first part, the old and cumbersome methods of "scratch division" and "gingerbread multiplication" were demonstrated. Then the same sums were worked in comparatively no time at all by our ordinary present-day methods. Next one member read a life of Napier and an appreciation of his work; and, lastly, to the bewilderment of the uninitiated, the use of logarithms was shown by the Sixth Form members. They undertook enormous multiplications, they calculated compound interest for fifty or more years, and they extracted cube roots with ease, whilst one girl worked lightning percentages on a slide-rule. During the present term we have undertaken to post up a weekly mathematical story or puzzle in each Upper School classroom. These notices are generally chosen from the books which we compiled last year.

There is still plenty of scope for work and play in the future of the club. One could collect stories of the origin of various units of money, time, length, &c. And I am sure that many games could be invented involving mathematical skill and quickness of thought. An elementary course of astronomy or of mechanics might be undertaken. A paper on the mathematics of architecture might be prepared. And what more thrilling now than the dynamics of a projectile, such as a bomb thrown from an aeroplane, or the theory of the gyroscopic motion of a torpedo? The bypaths of mathematics are too numerous for us to attempt to trace them all. But let us, at any rate, explore a few.

MESSRS. LONGMANS have just issued their new *Classified Catalogue*, 1916. It runs to over three hundred pages, and the index alone to over fifty pages. It forms a useful reference book for the college library.

MISS E. M. JAMES, Secretary of the Women's Imperial Health Association, 7 Hanover Square, W., sends us a *War-Time Directory*, which gives the names and addresses of the numerous associations in which women as workers or helpers are now interested. Copies may be obtained at the offices of the Association (price 6d., or by post 9d.).

400 MEDALS AND PRIZES!!!**STUDENT'S ELEMENTARY
BOOK-KEEPING**

By **ARTHUR FIELDHOUSE**, Accountant,
66 West Parade, Huddersfield,

who will forward copy **Index** and **Specimen Pages** on receipt of
Post Card addressed to **P.O. Box A 27, Huddersfield.**

364 Pages. 21st Edition. Post free 2/-.
100 Exercises. 350 Questions.

Teacher's Specimen Copy, from Author only, 1/-.

The ONLY TEXTBOOK to which there is a FULL KEY.

While this textbook more than covers all **Elementary Examinations** in this subject, its special design is to meet the requirements of the excellent Syllabuses issued by the **Royal Society of Arts, West Riding County School, the College of Preceptors, Oxford and Cambridge Locals, the London Chamber of Commerce, and the National Union of Teachers.**

The exercises and the principles introduced therein are so carefully graded in point of difficulty that the student is trained to work the most difficult set of transactions without being appalled at any stage of his study. No exercise is too long or too complicated to be completed between each lesson. The Questions will be found very useful for testing the student's knowledge at each stage of his work. **Examination Papers of the Society of Arts, the W.R.C.C., College of Preceptors, the Oxford and Cambridge Locals, and the L.C.C.,** are included.

LONDON: SIMPKIN, MARSHALL, HAMILTON, KENT, & CO., LTD.

**THE STUDENT'S
BUSINESS METHODS**

and

Commercial Correspondence.

By **ARTHUR FIELDHOUSE**, Accountant,
66 West Parade, Huddersfield,

who will forward **Specimen Pages** and **Index** on receipt of Post Card
addressed to **P.O. Box A 27, Huddersfield.**

Seventh Edition. 380 Pages.
2/6 Post free.

**80 TEST and EXAMINATION PAPERS, containing
1,300 QUESTIONS.**

This is the only practical, up-to-date book on **Commercial Correspondence and Office Work**, and is characterized by the same qualities that have made the author's other textbooks so popular. The lessons are well graduated, and the teacher is saved the drudgery of preparing **Test Papers**, one of which follows every chapter, in addition to numerous **Examination Papers**. **PRACTICAL work** is provided in the **Series of Business Transactions** included in some of the Test Papers. It is the only **Complete Guide**, covering all the **Elementary Examinations**. Small-priced books may be had on the subject, but as they do not cover the Syllabuses they are dear at a gift. **Efficiency** should be the first consideration. It is an excellent **Hand-book** for the Junior in the Office. **Teacher's Specimen, from Author only, 1/3 post free.**

LONDON: SIMPKIN, MARSHALL, HAMILTON, KENT, & CO., LTD.

THE ANNUAL**"DIRECTORY
OF
EDUCATIONAL
ASSOCIATIONS"**

will be found in the **MARCH** issue of the "THE JOURNAL OF EDUCATION," price sixpence, post free 7½d., a paper "indispensable to all school and college reading-rooms in these islands."—*Westminster Gazette.*

This "DIRECTORY," which extends over sixteen columns of the paper, has been corrected to date by responsible officials. It includes (a) number of members; (b) amount of annual subscription; (c) name of "organ"; (d) telegraphic address; (e) telephone number; (f) date and place of next annual meeting; (g) secretary's name and office address.

The *Journal of Education* for March contains as a Supplement *The Directory of Educational Associations*, which is now an annual publication. It is **one of the most useful returns published by any British educational journal.**

THE SCHOOL CURRICULUM.

WE print the following communication as received. We welcome this attempt to promote unity of effort, and hope that the challenge of the five associations will be accepted. The resolutions are so temperate and broad-minded that it is hardly possible that any reasonable opposition to them will arise.

The following resolutions, drawn up by a Conference representative of the five associations concerned, have received the approval of the Councils of the Classical, English, Geographical, Historical, and Modern Language Associations. They are intended to form a basis for common action between the five associations and, it is hoped, for co-operation with representatives of the natural sciences as well as with those of other elements in education. It must therefore be understood that they do not represent the full views of the associations concerned, but rather a common measure of their views, which they all accept as a basis. In the same way the propositions laid down do not profess to cover the whole field of education, but are limited to the spheres with which the five associations directly deal. Some apology, moreover, seems needed for the use of such terms as "humanities" and "sciences." They are simply employed for the sake of brevity, for all would agree that "humanistic" studies should be scientific, and "scientific" studies humane.

The resolutions are now published in the hope that in any coming reconstructions of our educational system this attempt to restate the "humanistic" position will mitigate the dangers incident to a violent breach of tradition and an excessive reaction against the past predominance of certain types of study.

But it will be obvious that they are drawn up in no spirit of hostility or indifference to either scientific or technical studies, and their framers are anxious to co-operate in securing for these, as well as for the studies with which they are themselves more particularly interested, their due place in a national system of education.

Pending the formation of some central council which could assume a large responsibility and speak with a wider representative authority, we would welcome any offers of co-operation or suggestions for the further practical development of the position taken in these resolutions.

Any communication may be addressed to the Chairman of the Conference of the Five Associations, Prof. Tout, Upper Booth, Edale, Sheffield.

The resolutions were as follows:—"That in the opinion of the Conference:—

(i) It is essential that any reorganization of our educational system should make adequate provision for both humanistic and scientific studies.

(ii) Premature specialization on any one particular group of studies, whether humanistic or scientific, to the exclusion of all others, is a serious danger, not only to education generally but to the studies concerned.

(iii) Humanistic education implies the adequate study of language and literature, geography and history, which in each case should, at the appropriate stages of education, go beyond the pupils' own language and country.

(iv) The representatives of humanistic studies would welcome from the representatives of the mathematical and natural sciences a statement with regard to those studies similar to that contained in (iii).

(v) In all reform of education it must never be forgotten that the first object is the training of human beings in mind and character, as citizens of a free country, and that any technical preparation of boys and girls for a particular profession, occupation, or work must be consistent with this principle.

(vi) Subject to the above principles the associations concerned would welcome a comprehensive revision of national education from the point of view of present needs."

MESSRS. GINN (9 St. Martin's Street, W.C.) offer to any teacher on application a copy of *Mathematical Portraits and Pages*, collected and arranged by Dr. D. E. Smith. These include Newton, Barrow, and John Wallis, and are well worth possessing.

OXFORD AND CAMBRIDGE LOCAL EXAMINATIONS, SUITABLE CLASS-BOOKS FOR JUNIOR AND SENIOR STUDENTS.

Mathematics and Science.

Algebra, Junior. By A. G. CRACKNELL, M.A., B.Sc., and AUGUSTUS BARRACLOUGH, M.A. 2s. 6d. With Answers, 3s.

"Maintains the high standard of excellence we are accustomed to expect from so well known a source. The treatment of the graphic portion is particularly good."—*Journal of the Assistant Masters' Association*.

Algebra, Junior, Test Questions in. By FABIAN ROSENBERG, M.A., B.Sc. 1s. With Answers, 1s. 3d.

Algebra, The School. By A. G. CRACKNELL, M.A., B.Sc., F.C.P. With or without Answers, 5s.
Also in Two Parts. Part I, 2s. 6d. Part II, 2s. 6d.

"The book is compiled in accordance with the latest views on the teaching of Algebra, and we have rarely come across a clearer or more satisfactory exposition of subject-matter."—*The Journal of Education*.

Arithmetic, The Junior. Being an adaptation of *The Tutorial Arithmetic* suitable for Junior Classes. By R. H. CHOPE, B.A. With or without Answers, 2s. 6d.

"Just as good a handbook on Arithmetic as the student can desire."—*Nature*.

Arithmetic, The School (Senior Local Edition). By W. P. WORKMAN, M.A., B.Sc., Head Master of Kingswood School, Bath. 3s.

Adapted from *The School Arithmetic* for the Oxford and Cambridge Senior Local Examinations.

"The best Arithmetic for Schools on the market."—*Mathematical Gazette*.

Botany, Junior. By Prof. FRANCIS CAVERS, D.Sc. 2s. 6d.

"Dr. Cavers has achieved a useful little book."—*Journal of Botany*.

"A very excellent volume. Practical to a high degree. The diagrams are very good."—*Schoolmaster*.

Botany, The Senior. By FRANCIS CAVERS, D.Sc. 4s. 6d.
"There is abundance of experiments, with useful practical hints and directions . . . the volume is evidently the work of an accomplished teacher."—*Educational Times*.

Chemistry, Junior. By R. H. ADIE, M.A., B.Sc. Second Edition. 2s. 6d.

"The results of fifteen years' experience of a thoughtful teacher are always valuable, and, as one might have anticipated, the book offers a thoroughly sound course of practical instruction."—*Nature*.

Chemistry, Senior. By G. H. BAILEY, D.Sc., Ph.D., and H. W. BAUSOR, M.A. 4s. 6d.

"We can commend the book to any student requiring a sound and clearly written textbook."—*The Journal of Education*.

Geometry, Junior. By A. G. CRACKNELL, M.A., B.Sc. 2s. 6d.

"A simple treatment of the elements of geometry. A feature of the book is the number of questions which require a numerical answer, incorrect and careless work being thereby easily checked."—*Schoolmaster*.

Geometry, The School. By W. P. WORKMAN, M.A., B.Sc., and A. G. CRACKNELL, M.A., B.Sc. 3s. 6d.

A simplified edition of the authors' well known *Geometry, Theoretical and Practical*, Parts I and II, specially adapted for ordinary school use.

"The reputation of this series, the authors, and the press from which this book is issued, are a sufficient guarantee of its value. Excellent in every respect."—*Schoolmaster*.

Heat, Junior. By JOHN SATTERLY, D.Sc., M.A. 2s.

"A good practical course. The diagrams are very clear, and the subject-matter all that could be desired."—*Schoolmaster*.

Magnetism and Electricity, Junior. By R. H. JUDE, D.Sc., M.A., and JOHN SATTERLY, D.Sc., M.A. 2s. 6d.

"This little book makes a special point of fundamental principles, and is especially adapted to the needs of pupils making a start in the subject."—*Educational Times*.

Science, Junior Experimental. By W. M. HOOTON, M.A., M.Sc., F.I.C., Chemistry Master at Repton School. Second Edition. 2s. 6d.

"An excellent and workable two years' course in Experimental Physics and Chemistry."—*Educational News*.

Languages, History, and Geography.

English Composition, Junior. By E. W. EDMUNDS, M.A., B.Sc., Senior Assistant Master at Luton Modern School. 1s. 6d.

"This excellent manual makes plain for the young pupil the essentials of good writing. A distinctly workmanlike production that can be heartily recommended as one of the best of its kind."—*Education*.

English Composition, Senior Course of. By E. W. EDMUNDS, M.A., B.Sc. 2s. 6d.

"Excellent devised and arranged."—*School World*.
"Teachers of English will find this a very useful book for practical classroom purposes."—*Schoolmaster*.

English Grammar, Junior. With Parsing and Analysis. By A. M. WALMSLEY, M.A. 1s. 6d.

"The work of a practical teacher who knows the value of compromise between the old and the new methods."—*Journal of the Assistant Masters' Association*.

English Verse, An Anthology of. For use in Schools and Colleges. By A. J. WYATT, M.A., and S. E. GOGGIN, M.A. Second Edition, Enlarged. 2s. 6d.

"The selections are admirably fitted for the purpose of presenting the course of English verse through the centuries."—*Literary World*.

English Prose, An Anthology of. For use in Schools and Colleges. By S. E. GOGGIN, M.A., and A. R. WEEKES, M.A. 2s. 6d.

"This anthology of English prose is compiled with abundant good sense. Within its limits the choice of writers could not well be bettered . . . a very useful book."—*Saturday Review*.

French Course, New Junior. By G. A. ROBERTS, M.A., Head Master, Russell Hill School, Purley. 2s. 6d.

"The short extracts are well chosen. With a capable teacher we have no doubt that this would prove a useful textbook."—*The Journal of Education*.

French Reader, New Junior. By J. P. R. MARICHAL, L. ès L., and L. J. GARDINER, M.A. 2s.

"Consists of well-chosen literary extracts in French."—*Education*.

French Course, Senior. By Professor ERNEST WEEKLEY, M.A., and C. GILLI, B.A. 3s. 6d.

This Course is designed for candidates preparing for the Senior Local Examinations. The text is substantially that of Professor Weekley's *Matriculation French Course*, but the exercises and passages for translation into French are different.

"A really excellent textbook."—*Teachers' Times*.

Geography, Junior, 1916-17. Including Outlines of Physical Geography, the British Isles, and Europe. By G. C. FRY, M.Sc. 2s.

"A useful and well arranged elementary work."—*Guardian*.

Geography, Senior, 1916-17. Including Principles of Physical Geography, the British Isles, and Europe. From the *Text-book of Geography* by G. C. FRY, M.Sc. 2s. 6d.

"Mr. Fry brings out the fascination of the broad view of geography."—*Literary World*.

History of England, School. By M. E. CARTER, Honour School of Modern History, Oxford. 3s. 6d.

Also in three parts as follows:—I, to 1603; II, 1485-1714; III, 1660-1910. 1s. 6d. each.

"The essential outlines of the subject are presented in the most easily digestible form."—*Guardian*.

Latin Course, New Junior. By J. V. THOMPSON, M.A., and LL. M. PENN, M.A. 3s. 6d.

"Admirably unites the more modern methods of teaching with those which have long stood the test of time."—*Educational News*.

Latin Course, Senior. By A. J. F. COLLINS, M.A., and ALFRED ROBINSON, B.A. 3s. 6d.

"Carefully planned and most capably worked out."—*Educational Times*.
"The book is businesslike and well arranged. The examples for translation into Latin Prose are specially well chosen, and serviceable vocabularies are provided."—*Guardian*.

The object of this Agency is to render assistance at a minimum cost to Masters seeking appointments. The lowest possible fees are therefore charged.

Interviews by appointment from 12 noon to 1.30 p.m., and from 3 p.m. to 5 p.m.; on Saturdays, from 11 a.m. to 12.30 p.m.

A PROSPECTUS will be sent on application.

THE

**BERGMAN ÖSTERBERG
PHYSICAL TRAINING COLLEGE,
DARTFORD HEATH, KENT.**

Trustees:

Sir GEORGE NEWMAN, M.D. (Chairman).

Major WALDORF ASTOR, M.P.

Dr. CHRISTOPHER ADDISON, M.P.

Lord SHAW OF DUNFERMLINE.

The Marchioness of SALISBURY.

Principal:

Miss M. H. MEADE, B.A. (Moral Sciences Tripos).

Vice-Principal:

Miss A. WIKNER (Royal Cent. Inst. of Gymnastics, Stockholm).

The College was opened in 1885, and was the first of its kind in England. Students are prepared to be teachers of Scientific Physical Education on Ling's Swedish System. The Course extends over two years. It includes the study of Anatomy, Physiology, Theory of Education; the Theory and Practice of Gymnastics, Massage and Medical Gymnastics, Dancing and Outdoor Games. Students practise teaching in schools in the neighbourhood. The College stands in its own ground of 15 acres, in a beautiful and healthy locality close to Dartford Heath.

The demand for mistresses of physical training holding the Diploma of this College is at present far in excess of the supply.

The course begins in September. Further particulars may be obtained on application to the SECRETARY.

GEOMETRY SCHEDULE—CAMBRIDGE LOCAL EXAMINATIONS.

THEORETICAL AND PRACTICAL GEOMETRY. By F. H. PEACHELL, M.A., and F. MARSHALL, M.A.

A Treatise on Geometry in accordance with the Schedule issued by the Cambridge Local Syndicate, with Specimen
Papers. 168 pp. Crown 8vo, cloth 1 6

READY SEPTEMBER 25.

ATLAS and NOTES on EUROPEAN HISTORY. By J. HARTLEY FUDGE, M.A. From the times of Diocletian
to the commencement of the present European War. 104 pp. 36 Coloured Maps. Crown 8vo 1 0

NOW READY.

The Senate Edition.

"La Guerre," Vol. II.

A French Reader, compiled from articles upon the European War selected from the
leading French Newspapers. With Notes on Idioms by TAYLOR DYSON, M.A. 10d.
The subject matter of this Reader, from its retaining interest, leads the student unconsciously to a better knowledge of modern French construction.
Many of the articles are of a conversational nature, and of the greatest value as supplying a means of acquiring a fuller vocabulary and a better
knowledge of the subtleties of the language. Volume I is in use at all the great Public Schools.

Complete Educational Catalogue, Specimen Pages, and Guides to the "Local" Examinations Post Free.

London: GEORGE GILL & SONS, Ltd., 13 Warwick Lane, E.C.

SOUTHPORT PHYSICAL TRAINING COLLEGE.

The course, extending over two years, includes:—Physiology, Anatomy, School Hygiene, First Aid and Sick Nursing, Remedial Exercises and Massage, Swedish Educational Gymnastics (Ling's System), Outdoor Games (Hockey, Net-Ball, Cricket, Tennis, Badminton, &c.), Dancing (including Old English and Morris Dances), Swimming and Rowing, Organized Recreative Games for School and Play-Ground.

Diplomas and Gold Medals are awarded to successful students.

The demand for capable teachers of Physical Training is steadily increasing, and students of this College frequently obtain appointments before completing their training.

HEALTH STUDENTS.

Cases of spinal curvature or general physical weakness are received in residence, and treated under medical supervision.

REFERENCES

permitted to Lord Kinnaird, the Right Hon. Viscount Gladstone, the Hon. and Rev. E. Lyttelton, D.D., and others.

Prospectus from the Secretary.

BEDFORD PHYSICAL TRAINING COLLEGE.

LING'S SWEDISH SYSTEM.

Principal: Miss STANSFELD

(President of the Ling Association of Gymnastic Teachers).

The object of the College is to train Students to enable them to become Teachers of Gymnastics and Games in Schools.

The Course of Training extends over two years, and includes the Theory and Practice of Gymnastics on the Swedish System, Massage and Medical Gymnastics, Anatomy, Physiology and Hygiene, Dancing, Lacrosse, Lawn-tennis, Hockey, and Cricket.

An educational centre like Bedford affords special facilities for practice in Teaching and professional coaching in Games. Swimming and Boating in the summer.

For Prospectus apply—**SECRETARY**, 37 Lansdowne Road, Bedford.

CHELSEA PHYSICAL TRAINING COLLEGE FOR WOMEN. (SWEDISH SYSTEM.)

Head Mistress: Miss DORETTE WILKIE.

Three Year's Diploma Course of University Standard. The exceptional training in Class Teaching and Lecturing afforded to students at this College enables them to secure appointments of the highest standard.

Apply for Prospectus to **SECRETARY** (Room 85), S.W. Polytechnic Institute, Chelsea, London. Telephone: Western 899

COACHING, Correspondence Lessons, &c.

CORRESPONDENCE LESSONS.

MISS A. W. GREGORY, L.L.A.,
Coaches orally and by correspondence in History and Literature, Early English, French, and German for the Matriculation, Cambridge and Oxford Higher Locals, and other University Examinations. School Examinations undertaken.—3 Ickburgh Road, Upper Clapton, N.E.

HISTORY and MATHEMATICS
LESSONS wanted two mornings a week in Girls' Schools. Address—No. 10, 234. #

* Replies to these advertisements should be addressed "No. —, The Journal of Education, 3 Broadway, Ludgate Hill, E.C." Each must contain sufficient loose stamps to cover postage on to advertiser. Post Cards will NOT be sent on.

CONTINENTAL SCHOOLS AND PENSIONS.

PARISIAN family receive two or three paying guests. Near Sorbonne and Luxembourg Gardens. August and September at country home. French conversation. Excellent cooking. Highest English and French references. —Madame CHARLES REGNONI, 7 rue Le Verrier, Paris, VIe arr.

TO SCHOOLS. — Experienced **LADY ACCOUNTANT** free to give Course of Instruction in Book-keeping and Business Training and Methods. Specially adapted for private accounts.—M.S.C., Room 35, 9 Regent Street, S.W.

"As a medium for advertising 'Posts Wanted and Vacant' in private and public schools, **The Journal of Education** fulfils a very useful mission to secondary teachers."—*The Western Daily Press.*

BOARDING SCHOOL FOR

LUGANO (Switzerland).

French, German, Italian, English, Science, &c. Sport. Limited number of Pupils. Preparation for examinations. Excellent climate.—**Mile I.M. CUMIER.**

THE LING ASSOCIATION

(Of Trained Teachers of Swedish Gymnastics).

FOUNDED 1899.

Hon. Secretary: Miss HANKINSON, 67 Shaftesbury Road, Crouch Hill, London, N.

EXAMINATIONS held for Swedish Gymnastic Teachers' Diploma.

The Association keeps a list of certificated Gymnastic and Games Mistresses.

For Terms of Membership, Conditions of Examination, Entrance Forms, Syllabus, &c., apply to the **HON. SECRETARY.**

"Good and Bad School Postures."

Published by the Ling Association. A series of ten Drawings, showing the effects of faulty positions in standing, writing, sewing, &c. No School should be without them. Mounted on cards, 15 in. x 20 in., with cords ready for hanging. Price 5s. per set, post free in British Isles, from Messrs. SHERRATT & HUGHES, 33 Soho Square, London, W.

SWEDISH MASSAGE AND MEDICAL EXERCISES.

One Year's Course for Ladies.

This course of Individual Training in the Swedish Methods equals **THE BEST TRAINING OBTAINABLE IN STOCKHOLM.**

Principals: Lieut. S. GOLJE, Mrs. S. GOLJE.

Grad. Royal Central Inst. of Gymnastics, Stockholm.

127 UPPER PARLIAMENT STREET, LIVERPOOL.

PORTLAND ROAD GYM-

NASIUM, London, W.—Students thoroughly trained for Public Examinations. Duration of Course, 2 to 3 years. All branches of Physical Work. English and Swedish Gymnastics, Hygienic Exercises, Dancing, and Remedial Work.—**Miss TOLLENACHE**, Member and Examiner of the British College of Physical Education, M.G.T.I., 113 Mount Street, Grosvenor Square, W.

THE NATIONAL SOCIETY OF PHYSICAL EDUCATION.

(Founded 1897.)

President: Sir H. H. RAPHAEL, Bart., M.P.

Headquarters: **THE POLYTECHNIC,**
REGENT STREET, W.

EXAMINATIONS for the Society's Gymnastic Diploma, Elementary School Teachers' Drill Certificate, Swedish Physical Training Certificate, &c., &c., are held in March, June, October, and December.

College and School Principals requiring fully qualified Drill or Gymnastic Teachers should notify the Hon. Secretary.

Handbook and Syllabus may be obtained of Mr. A. H. FREEMAN, 118 Mercers Road, Tufnell Park, N.

THE INCORPORATED BRITISH COLLEGE of PHYSICAL EDUCATION.

5 & 7 Johnson Street, Notting Hill Gate, London, W. (Founded 1891.)

EXAMINATION for MEMBERSHIP (including the Theory and Practice of British and Swedish Educational Gymnastics), **LICENTIATESHIP**, and for the **SCHOOL TEACHERS' DRILL CERTIFICATE** are held thrice annually—in February, June, and November respectively—but additional (Local) Examinations for School Teachers are held under certain conditions. Full particulars to be obtained on application.

Education Committees, Schools, Colleges, and others requiring qualified **INSTRUCTORS** of either sex should communicate with

FRANK H. GELLING, Hon. Secretary.

ADVERTISEMENT and other matter for **NOVEMBER** issue should reach the office by **October 23rd.** Urgent Notices of Posts Vacant and Wanted can be received up to **October 25th** (first post).

Messrs. TRUMAN & KNIGHTLEY, Ltd.,

Scholastic Agents.

MANAGING DIRECTORS:

S. A. TRUMAN. JAMES HEARD, B.A.
(Westminster and Trinity College, Cambridge).

This Agency is under distinguished patronage, including that of the Principals of the majority of our leading Public and Private Schools.

ASSISTANT MISTRESSES.

Messrs. TRUMAN & KNIGHTLEY introduce University and other qualified English and Foreign Mistresses and Teachers of Special Subjects in Secondary, Public, and Private Schools. *No charge is made to Principals, and no charge to candidates unless an appointment be secured through this Agency.*

ASSISTANT MASTERS AND TUTORS.

Messrs. TRUMAN & KNIGHTLEY introduce University and other qualified English and Foreign Masters and Tutors to Schools and Private Families. *No charge is made to Principals, and no charge to candidates unless an appointment be secured through this Agency.*

LADY MATRONS AND HOUSEKEEPERS.

Messrs. TRUMAN & KNIGHTLEY introduce well qualified and experienced Lady Matrons and Housekeepers to Boys' and Girls' Schools. *No charge is made to Principals, and no charge to candidates unless an appointment be secured through this Agency.*

TRANSFER OF SCHOOLS AND PARTNERSHIPS.

Messrs. TRUMAN & KNIGHTLEY undertake all negotiations connected with the Transfer of Schools and Partnerships. All communications are treated in the strictest confidence. *No charge is made to Purchasers, and no charge to Vendors unless a sale or partnership be effected by this Agency.*

Any negotiations entrusted to Messrs. TRUMAN & KNIGHTLEY receive prompt and careful attention, every effort being made to save clients as much time and trouble as possible.

TELEGRAMS: "TUTORESS, LONDON."

TELEPHONE No.: MUSEUM 1136.

**SHEFFIELD HOUSE, 158—162 OXFORD STREET,
LONDON, W.**

"IT IS CLEAR

that a capable agent who has pursued his calling for years will have gathered, by visits, by personal interviews, and by correspondence, a globe of precepts, and that his profession of recommending schools is no idle pretence."

The Journal of Education, June, 1916.

This is the definition, by a competent judge, of what should constitute a
USEFUL SCHOLASTIC AGENT.

It may be presumed that no one would knowingly make trial of the services of any other kind, but it is still true that a proportion of Principals are induced to yield to the importunities of plausible and worthless concerns, with the resultant loss and disappointment that might be expected. This is a disillusioning experience for which there is no necessity. The established, reliable Scholastic Agencies are not many in number, and they are well known, and their record and standing easily to be ascertained. As one of these we have a sufficient claim to clients' confidence. If, further, we obtain the greater share of Parents' Inquiries, we also take unusual pains to secure them. At present our advertisements are appearing in nearly 400 papers in this country alone; and, outside of enemy countries, the War has made no difference in the circulation of our List of Schools.

As a result, few days pass without at least one letter of thanks from parents who appreciate the assistance we have given them. Principals are equally generous in expressing their indebtedness, as this recent acknowledgment, amongst others, testifies:—

September 20, 1916.

"Gentlemen,—Our term has just commenced, and I feel I must write to thank you for your help in extending my Boarding Connection. I am most grateful. To-day we scored another success. Mr. H. of B. came over to see the place, and had no hesitation in deciding to send his boy to us. He joins us next Monday. I knew from his conversation that your recommendation had been the deciding factor. The Nottingham boy came on Saturday; this, too, is due to your agency. H. and R. are both with us. Owing to your splendid work, I have opened a new dormitory this term—a beautiful room; it took Mr. H.'s fancy at once. At present, of course, it is not half full, but I have no fears for the future, having unbounded confidence in you."

If you have not yet made trial of our services, we shall be glad to hear from you, with particulars of your School.

OCCASIONAL NOTES.

THE *Contemporary Review* for September leads off with an article by Dr. M. E. Sadler on "Education after the War," and the editor could not have chosen a better qualified contributor. To no living Englishman could Dr. Johnson's epitaph on Goldsmith more justly be applied, and, if he has had no personal

experience of primary schools, his experience as Chairman of the Registration Council has brought him into close relations with the accredited representatives. Wiser than Mr. Temple, Dr. Sadler confines himself to broad generalizations, has no school of the future to recommend as an ideal, and gives the religious difficulty a wide berth. The War will give "a new and deeper significance to political liberty," and at the same time "a fuller and more worthy meaning to freedom of teaching." The teacher of the future will recognize, with Edward Thring, that education is "a transmission of life through the living to the living," and that he is called upon to give his life for others. The community, in its turn, must know the teacher as a social emissary, and so improve the conditions under which he works as to enable him to pursue his high calling. In plain prose, there must be for the worker a higher wage and smaller classes. If the teacher is to know, as he should, each individual, he must know his home circumstances, and the maximum number in a class should be fixed at thirty, for infants at ten to twelve. To carry out such a reform in its integrity would almost double our education estimates, but Dr. Sadler suggests some possible alleviations. Music and

Eurhythmics may be taught in larger classes. Manchester and Leicester have shown how schools can be profitably duplicated by half-day attendances. For continuation schools, to be organized in trade groups, Dr. Sadler would exact that all employers of labour should be compelled to permit the attendance of employees up to the age of seventeen, as directed by the Local Authority.

A BRIEF summary of Dr. Sadler's conclusions can do but bare justice to a long article that deserves careful study. The reader will naturally compare it with Mr. Temple's Presidential Address.

Desiderata. We are struck by the disparity of treatment. The subject is so vast that the two writers hardly overlap at a single point. With Mr. Temple we have dealt elsewhere, and here we can only note with surprise that the Vice-Chancellor of the Leeds University has no word to say on the University of the future, nor on secondary boarding schools with which, from his semi-official Reports, he has been so intimately connected. On these topics, and in particular on Mr. Temple's glorification of the boarding school as the only perfect ideal, we hope to hear further from Dr. Sadler. Meanwhile, his *obiter dictum* on the four greatest living educational reformers—Kirchensteiner, J. Dewey, Mme Montessori, and Baden-Powell—is likely to provoke lively comment.

THE speakers on Science in Education at the meeting of the British Association must have reminded the audience of those little exhibitions, called "A Happy Family," in which various natural enemies amongst the animal creation are seen living in peace together in the same cage. Here was Mr. J. Talbot, Head

Master of Newcastle Grammar School, a scientist to the backbone, insisting vigorously on the need for the development of the power of literary expression all through the school course. And here was Mr. Hadow, of Armstrong College, classical scholar and doctor of music, expressing his satisfaction that the science men had got the ear of the nation, and Dr. H. B. Gray, founder of the Greek drama at Bradfield, suggesting that one-third of the time now given to games in preparatory schools should be devoted to manual training. Surely, if the lion can thus lie down with the lamb, we need not despair of a permanent treaty of peace between them. But we could not follow Dr. Mary Williams when she declared that science study was the best method of learning to weigh evidence. If she was thinking of the University stage, we should say that the best training in sifting evidence was the study of history in the original authorities; if she was speaking of school work, we should hesitate to say that boys and girls of school age are capable of learning to weigh evidence.

AT the same meeting several speakers pleaded for the introduction of the metric system of money, weights, and measures. The reform is indeed much to be desired, and we believe that the difficulties in the way of it are greatly exaggerated. Instruction in the system is now given in most schools, both elementary and secondary, and could, without much trouble, be given in all. If this were done, whenever the change was made most of the population would already be familiar with the new scheme. The abolition of poles and roods, pints and gallons, avoird-

pois and apothecaries' weight would mean an immense saving in school time, though the year of school life claimed by one enthusiastic speaker is obviously an exaggeration. Nor would the change excite the hostility which has been evoked by the proposal to revolutionize our spelling. Little sentiment gathers round pecks and furlongs and cubic feet. Doubtless the old measures would still linger on in popular usage just as they do in France. Housewives would buy their peas by the pint, men would state their height in feet and inches, anglers who tell tall stories would give the weight of their catches in pounds. It is only in the big world of business that we want the metric system. One speaker mentioned that it had already been adopted in shipbuilding, and we hope that may be taken as an earnest of universal success.

MR. TEMPLE was unquestionably right when he told the British Association that the ideal to be aimed at should be no statutory leaving age, but the education of every boy and girl up to the limit of his capacity. It is a view which we have put forward from time to time in these columns. Mr. Temple, however, did not discuss the question of the proof of capacity for further education which should be required. This is really the crux. The problem of how to award scholarships comes before us in another form. Is it to be left to the schoolmasters and mistresses to say whether a child has reached his limit? The immense difference in the views of teachers on such a point would make this impossible. If there is to be a barrier in the shape of an examination at the end of each year, of what standard should that examination be? If the standard is high, we should have the scholarship system under another name. Yet it could hardly be easy; no one would pretend that the passing of the "Senior Local" could be accepted by the State as a final test. At this rate, indeed, state-provided education would never cease; every pass B.A. would have proved his claim to further training. Sir Henry Craik has been putting the other side of the question forcibly in a popular paper. He reminds us that an education which involves no hard struggle or effort, and does not impart force and grit, is of small value; and he thinks that the poverty and meagre equipment of the Scotch parish school have been of actual value to Scotland, because they have helped to endow her children with an inheritance of impregnable perseverance.

CAN anything about the relative merits of English and German education be inferred from the doings of Englishmen and Germans in the War? There is no lack of hasty deductions, but we find it extremely difficult to follow them. It is not even clear how far German education was responsible for that arrogance and overweening ambition which was certainly a potent factor in producing the War. The excesses of the Germans in Belgium are taken as proof of a perverted education, but we have hardly reached the stage when we can affirm that the English system purges every individual of the spirit of racial hatred. We may, however, fairly claim that, whatever have been our sins in the past, there has always been a saving minority to protest against them, and that this is lacking amongst the Germans may be a result of their highly centralized education. It is pretty plain, too, that in individual daring and enterprise the Briton

can beat the Teuton, and this we may fairly place to the credit of our schools with their games, cadet corps, and scouting. In the conduct of the War our officers have undoubtedly, both in heroism and in self-control, shown themselves superior to the German, and our men without exception have offered themselves as willing sacrifices, but it is difficult to trace the superiority to differences in education.

BUT, even if we could connect the superiority with some element in our school training which German schooling lacks, it would still not be proved that our education is better than German education; only that it is better for the purposes of war. It might still be inferior for the purposes of peace, and, after all, the world has progressed so far that peace is the rule and war is the exception. So we must not be satisfied if the War shows that our schools turn out better fighters. War is a kind of violent electric shock applied to the body politic, and it is not satisfactory if the members of a body are vigorous and earnest only when they are stimulated by a violent shock. War is exciting, peace is dull; and the virtue that blooms only when fostered by excitement is of a lower order than the virtue that flourishes in an atmosphere of dullness. Education is tried in the happy valleys of peace no less than in the furnace of war, and the period of social reconstruction at home and economic rivalry with enemies and neutrals abroad may yet put our schools to a severer test than even the battlefield of the Somme.

THE views on German education above expressed are confirmed by an article in the *Manchester Guardian* on "Currents of Thought in Germany," which we received after it was in print. **The Einheitschule.** Of official opinion the writer has nothing new to tell us, except that the new syllabus for the teaching of history, which came into force last Easter, aims at concentrating the attention of scholars on the last half-century and the glorification of the Hohenzollern dynasty and the reigning Kaiser, who has consolidated and confirmed the unity and domination of the nation. But he goes on to show that all the while there has been an undercurrent of educated opinion, not wholly suppressed by the Government, in favour of the *Einheitschule* first advocated by Prof. Rein of Jena. The children of all classes and all creeds must, till the age of twelve, sit on the same school bench, and after that there must be for every lad of parts a chance to rise—not a ladder, but a highway, *Bahn frei* as opposed to *Bahn leicht*.

THE first Report of the Advisory Council on Scientific and Industrial research is largely tentative. But on one point the Council speak with no uncertain voice. **The Need for Science Students.** The need for an increased number of competent researchers is urgent; the annual number of students who graduate in Science with first or second class honours is only five hundred and thirty, and only a small fraction of these have received any training in research. Nor do we want brilliant leaders only; an army of humble workers is wanted behind them. Effective research calls increasingly "for the systematized drilling of a corps of sappers, working intelligently, but under orders." We have not yet learned how to make use of mediocre ability—a point which Dr. Sadler is continually urging. Research

studentships would be useful, but only on condition that suitable candidates for them are forthcoming, and such candidates will not be found unless the number of science students at the Universities is largely increased. The Consultative Committee, it will be remembered, in its Report on Scholarships, has already expressed the opinion that more scholarships are needed just at present on the scientific and technological sides rather than on the literary sides, and has recommended some large schemes of State assistance.

A BOARDING school in the country for the children of working men sounds like some dreamer's vision, but the devoted ladies of the Caldecott Community, whose work we made a brief reference in our Notes last month, mean that it should be a reality. The parents of twenty of the present pupils—London working men and working women—are prepared to pay the necessary maintenance fees, while Miss Potter and Miss Rendel, the directors of the present school, will carry on the work of the new institution without fee or reward. Even so, however, an income of £800 a year will be needed instead of the present revenue of £450, for it is hoped that the school will have far more than twenty inmates. For this annual sum an appeal has appeared in the press, signed by Lord Lytton, Prof. Nunn, Vice-Chancellor Sadler, and other eminent educationists. The education of the children of town working men in the country, where they will be in touch with rural life, is fraught with endless possibilities of good. Subscriptions and donations should be sent to the Hon. Treasurer, Mrs. A. Maresco Pearson, 25 Cartwright Gardens, W.

WE make it our boast that we do not, like the Germans, make war on innocent civilians, but our treatment of persons of German extraction in our midst seems to show that the boast is not altogether justified. We have recently heard of two particularly bad cases. **Women Victims of the War.** A German lady who has been thirty years in England, and fourteen at a girls' high school, was dismissed from her post in consequence of popular clamour. The Council, we are glad to say, gave her what financial solatium they could. The second case is worse. The lady in question is a British-born subject, the daughter of a German who was naturalized ten years before her birth. She was born in England and educated at an English school. Popular feeling seems to have been excited by the fact that the head mistress's housekeeper was a relative of the German Governor of Belgium. So the assistant mistress was obliged to leave the school. Such cases, we believe, are rare, but they are hard cases indeed. Being British subjects, and not under the faintest suspicion, these ladies cannot be interned. Being of German extraction, they will find it hard to get help from any of the War Charities. The treatment they have received is creditable neither to our chivalry nor to our common sense.

IN these columns last month we contrasted the work of the German Chambers of Commerce for commercial education as seen in the *Handelshochschulen*, initiated by them, and the work of the English Chambers, as seen principally in examinations. The difference between the two in matters of education is indeed remark-

able. If the German man of business finds a gap in the equipment of his youth, he founds institutions and engages teachers to fill it; the Englishman is content to set up an examination. Some localities, however, in England are beginning to take the better way. Bradford, which has always been a strong centre for language teaching, and which has made some progress with the teaching of Russian, is negotiating a scheme for sending a number of English students to study at the Universities of Petrograd and Moscow. The Education Committee is prepared to send ten or fifteen young men, and it is trying to persuade the local Chamber of Commerce to finance at least five more. Such a scheme would do far more for Russian than the institution of prizes and examinations. It is not clear whether the Education Committee's students will be sent with a view of their teaching the language on their return, or whether they will be all commercial students; but we hope that some, at least, will be teachers.

THE scientist, in reading recent utterances of the champions of the humanities, must have felt inclined to cry *Habent*, so anxious do the humanists seem to be to prove that they teach science just as much as the chemists and biologists do. For instance, in the manifesto dealing with humanistic studies, issued by five Associations and published in our last number, we read that "all would agree that 'humanistic' studies should be scientific and 'scientific' studies humane." The same compromise or concordat, as we have pointed out elsewhere, was propounded by Mr. Temple to the British Association. If this were true, it would seem that we are fighting about shadows. But is it true that humanistic studies should be scientific? If all that is meant were that history and literature should be taught in a spirit of accuracy, care, and thoroughness, we should all agree; but the word "scientific" implies much more than this. Scientific study is essentially the study of cause and effect and the investigation of natural law. The humanities are the study of the manifestations of the human spirit in word and act. It is true that these manifestations are determined by natural law, and may even be regarded as the result of natural forces, but it is not that aspect of them that we want boys and girls to consider. There may be such a thing as a scientific study of Shelley, but it is for professors, not for children. The scientific view of history young people can understand but very partially. No good will be done by attempts to obliterate the distinction between humane and scientific studies in schools. The better course is to admit that they are fundamentally different, and that each has its proper place in the training of a human being.

THOSE of us who welcomed the formation of an Educational Science Section (Section L) as part of the British Association may be pardoned for feeling some slight disappointment with the reports of this year's meeting. Instead of a scientific treatment of the various questions we have a collection of views and opinions. There is nothing which approaches in interest and value the Report on Eyesight and Printers' Type of a few years ago. That report was welcomed and was largely noted by publishers of school textbooks, with the result that there has been a marked improvement in the type

used. Compared with work of this kind, the mere expression of views and opinions is of trifling importance. Nor do we feel that a collection of children's essays affords much material for valid conclusions in psychology. Many tests of a more truly scientific character might be suggested. An investigation into the effects of various forms of physical training would be useful. It is true that psychological tests are difficult to apply, but the Educational Science Section must undertake them to justify its title.

WE learn that the Council of Bedford College has reconsidered its position in regard to Dr. Thomas, late Head of the Botanical Department. The resolution to which we referred in our last issue has been rescinded in favour of one which gives reasons for the proposed reconstitution of the Department. In addition, Dr. Thomas is to receive compensation in money, and an official testimonial setting forth the high opinion which the Council holds in regard to her organizing ability and teaching skill. This result of the Council's second thoughts is understood to be satisfactory to Dr. Thomas, who is chiefly concerned; but we hope that the incident will be noted by other governing bodies, and that a working rule may be firmly established that teachers shall not be asked to resign or refused reappointment except on grounds stated. In particular ought the practice of annual reappointment to be restricted to junior posts, and in all cases it should operate only during the first three years of tenure. It is evident that, if a teacher has done satisfactory work during this probationary period, nothing is gained by continuing the formality of annual reappointment.

LOCAL AUTHORITIES.

THE Departmental Committee now considering the question of educational changes and developments after the War, might obtain some useful information by requesting the various Local Authorities to formulate suggestions. Local Authorities have now had about fourteen years' experience, and that period has been as significant, and in some respects more productive, than the decade which followed the Act of 1870. Elementary schools have been overhauled, and some attention paid to the physical condition of the children attending them; the training of teachers has been revolutionized; and in the field of secondary education remarkable progress has been made. The authorities have been chiefly concerned, no doubt, with the machinery of administration rather than with the "contents of education," and they have been obliged to follow, willingly or unwillingly, lines of general policy laid down for them by a benevolent Government Department.

WHILE, however, Local Authorities have not enjoyed the freedom which the Education Act of 1902 was supposed to confer upon them, it must have been impossible for them to carry out the routine of administration, or apply the numerous regulations of the Board of Education, without forming certain opinions. An Education Committee, as a rule, may be said to represent various interests in the area for which it acts. It is provided, in most of the schemes constituting a committee, that University education, the secondary education of boys and girls, technical instruction, commercial and industrial education (having regard to the special industries of a county), the training of teachers, and elementary education in council and voluntary schools, shall always be represented either

among the members appointed from a county council, or among members appointed from outside the council. It would be very surprising, therefore, if those bodies in close touch with educational administration, and also with the industries and lives of the people, in various parts of the country, could not fruitfully consider the reforms, if any, required in the educational system, and make some useful suggestions to the Departmental Committee.

It would add very considerably to the value of any suggestions which a Local Education Authority might make if the Departmental Committee indicated the main points upon which discussion was invited.

It would be interesting, for instance, to know whether Local Authorities throughout the country are generally in favour of raising the age of compulsory school attendance to six years; whether, under suitable conditions, a system of compulsory half-time school attendance between the ages of thirteen and fifteen or fourteen and sixteen would be advisable; whether there is any considerable body of opinion in favour of examinations—not for financial but for educational purposes—for the older scholars in elementary schools; the directions in which employers of labour should be compelled to co-operate with educational institutions and so on. Even if the Departmental Committee obtained no assistance from the discussions of the Local Authorities, the discussions themselves would do good and prepare the way for progressive changes.

IF any justification is required for the Education (Administrative Provisions) Act of 1907, which inaugurated the medical inspection of children attending elementary schools, it will be found in the Annual Report of the Chief Medical Officer of the Board of Education. Eight years' work, he says, has brought to light a large mass of physical defect and disease, varied in character and widespread—most of it preventable. Sir George Newman puts forward two general conclusions. First, not less than a quarter of a million children of school age are seriously crippled, invalided, or disabled; not less than a million children of school age are so physically or mentally defective, or diseased, as to be unable to derive reasonable benefit from the education which the State provides. Thus, apart from the suffering, disease, and premature death entailed, the State, from a financial point of view, is not getting adequate return, on physical grounds alone, for a substantial part of its expenditure on elementary education.

HERE is a more encouraging reflection. No one, says Sir George Newman, can study the workings of this new piece of national machinery without being impressed with its far-reaching effect. There is a direct physical effect. Hundreds of thousands of children have found relief, and their feet are to-day set on the high road of recovery to health and strength. They ought, with reasonable fortune, to grow up strong men and women, the healthy parents of healthy offspring. There is also an indirect effect not less significant. School medical work has taught us that each defective or ailing child must be handled as an individual. The school medical service has given a new understanding of the child as an individual which cannot, in the future, fail to affect the whole scheme of its education. "Reading, writing, and arithmetic are, it is true, the tools of the child's intellectual education; they should not, however, be taught in such a way, or under such conditions, as to injure the child in the process. It is the child and not his acquired accomplishments which is of primary value to the nation."

IT is satisfactory to realize that a beginning has been made in the recognition of a responsibility, neglected for thirty years, of ascertaining whether the child compelled to attend school is in a physical condition to be educated. But it is only a beginning. The late President of the Board of Education, when he introduced the Estimates, stated that the provision made by Parliament for education in 1914-15 was just over £15,000,000. The grant for school medical service in the same year amounted to £192,414. It is obviously inadequate, and ought to be largely increased if Local Authorities are to be placed in a position to make adequate arrangements for following up and efficiently treating defective children. This question of the physical condition and care of children, and the adaptation of the educational system to their limitations, must form an important branch of the inquiry now being made by the Departmental Committee, and it cannot be supposed that Sir George Newman's conclusions will be disregarded.

SCIENCE NOTES.

The Art of Popular Lecturing. THE Council of the British Association received from the Organizing Committee of the Educational Section a recommendation that efforts should be made to revive popular scientific lectures. A Committee was appointed, and has collected useful information. We hope that practical measures may result in an increase of what we may term the serious popular lectures. In many respects the discourse which Prof. Bone gave at Newcastle on "Flameless Combustion" exhibited the characteristics which such lectures should have. He told how the practical need of some device to save lives in coal mines led to the early researches of Davy and Stephenson. The superiority of Davy's work lay mainly in its more philosophic aim, resulting in a theory capable of further development as well as in an immediately useful safety-lamp. Prof. Bone illustrated by striking experiments how recent advances have been made, and thus led his audience to new applications of scientific knowledge to industry on a large scale.

Philosophy and Utility. EVEN the cursory account just given shows how the subject of the discourse brought in the human interest in life-saving, the biographical interest in discovery, the value of theory and experiment in enlarging our knowledge and control of our environment, and the valuable application to industry resulting from a side-branch of the investigation. The whole lecture was an object lesson in the methods and aims of science, and in the interdependence of utilitarian and philosophical progress.

The Science Committee. IN announcing the appointment of Science and Modern Languages Committees, Mr. Henderson stated that the Government regarded these as expert. This description is undoubtedly warranted as regards University education in science; but is it true for schools? The terms of reference explicitly include science in secondary schools, yet the list of members does not include a single person of either sex who is a present day teacher of science in secondary schools. Doubtless the committee will receive evidence and suggestions from experienced science masters and science mistresses; but the fact that they are not directly represented weakens the claim of the Government to regard the committee as "expert," and the admirable character of the personnel in other respects does not alter this fact.

The Royal Society. WE understand that the Royal Society is considering a memorandum on school science. The Council or Committee which will be responsible for the forthcoming report, to which the memorandum is preliminary, does not include any present teachers in schools, and we believe has only one ex-schoolmaster. Once more school teachers are to be taught their business by people who know little of schools and less of schoolboys and schoolgirls. The report may be wisely confined to main principles, or it may propose a detailed and probably impossible program—in either case it will have behind it the authority and prestige of the premier learned society.

The British Association. THE Newcastle meeting did not produce any startling scientific discovery, and the attendance was about half what it would have been in peace. Nevertheless the success of the meeting was never in doubt. Useful discussions took place in every section, all meetings were businesslike, the record of work done during the preceding year by various committees was larger than could have been anticipated. Local hospitality was most kind, and a quiet sociability pervaded the meeting. The inaugural address of Sir Arthur Evans deserves to be widely read; his account of the Egyptian, Babylonian, and Cretan roots of European civilization would doubtless have attracted much attention had not the War prevented adequate press notices. The President-Elect for next year is Sir C. A. Parsons, and Bournemouth is to be the place of meeting.

Useful Optics. IN the course of an address given several years ago to the Teachers' Guild, Sir Oliver Lodge urged that every study undertaken in school should be pursued to a useful point. Few school courses in optics would stand criticism from this standpoint. Among gaps in the course would probably be found most of the properties which determine the construction or choice of field-glasses, opera-glasses, microscope lenses. Nor is the omission of the utilitarian side com-

pensated by a sound knowledge of elementary principles. It is quite usual for examination candidates to describe rays of light as proceeding from the eye to form the image. Perhaps it would make for clearer teaching if "projected" and "visual" were substituted for "real" and "virtual" in the description of images.

COLONIAL AND FOREIGN NOTES.

UNITED STATES.

Of Pronunciation. WHEN a proposal was made to bring French spelling into accord with French pronunciation, the Academy settled the matter quickly by asking—"With whose?" Not only is French spoken in Languedoc otherwise than in Touraine, but no two individual speakers of French agree in all their sounds. Similarly, the much abused "American accent," which means pronunciation, does not exist. During a discussion in the United States over a scholar's assertion that the only standard of English pronunciation was that prescribed in the Oxford Dictionary a prominent Chicago educator exclaimed: "I don't talk English; I talk American. We shall continue to teach the American pronunciation in Chicago schools." He has been taken to task in his own country and asked what the American pronunciation is. The Bostonian uses a rich, broad *a*, the Chicagoan a flat *a*. Is *r* to be uttered with the multiple whirr that it receives from the tongue of the Middle Westerner, or as the modified liquid that issues from the mouth of the New Yorker? Is it American to pronounce "floor" *flo* and "door" *do* as in Georgia, or "Mary" in the fashion of the Missourian, who makes the name sound like *marry*? The New Englander puts the accent of "idea" and "museum" on the penult, as we do; your true Westerner transfers it to the antepenult. Now which of the two has the right to determine American usage? The truth is that American, which the prominent Chicago educator was resolved to speak, no more exists as a spoken language than does German. Our war correspondents seem to be at home in every dialect of German; we, for our part, often wonder how the German soldiers understand each other. A conversation between an East Prussian peasant and a Black Forester, let us say from Nordstetten (Auerbach's birthplace), would be a strange thing to hear; for, while it has often been proposed to obliterate dialect, Germans in practice follow the blunt rule: "Es soll jedermann sprechen, wie der Schnabel ihm gewachsen ist." As for the "American accent" with which it has been customary to reproach visitors from the United States, let us hear no more of it.

Playgrounds at New York. New York claims to have devised for her children a new system of physical training, and she is proud of her playgrounds. In 1888 an Act for incorporating Societies providing for Parks and Playgrounds was passed. In 1891 experimental playgrounds were opened at Second Avenue, 90th to 91st Streets; and, four years later, the important Act which requires outdoor playgrounds in connexion with all new school buildings chartered the air for the young. Mayor Strong, in 1897, appointed a small Parks Commission, which recommended thirteen sites for playgrounds, one in every park. Next year the Board of Education took up the work of provision. From this time playgrounds and open-air gymnasiums multiplied, whilst kindergartners or trained gymnasts inspired and supervised proper exercises. In December 1908 the City Playground League was organized—with statutes, standing committees, and expert advisers. An article in the New England *Journal of Education* (LXXXIV, 2) exhibits the beneficent activity of this Society. To the illiterate British mother the playground is an enclosed space in which her children get dirty; to the City Playground League it is "a place set apart for spontaneous activity, where the child may express his individuality under trained supervision." Pictures and the press unite in persuading us that England has something to learn from New York and from other cities in the United States as to the use of the educative playground.

The War and Education. The *Educational Review* (LII, 2) prints William Archer's address on "Knowledge and Character," delivered at the Annual Meeting of the Moral Education League, London, February 6, 1914. It is an honour to have the paper recalled after so long a time; for moral addresses are wont to float swiftly under the bridges. In the *Educational Review* there is, further, a note on "The War and its Pedagogic Opportunities." It appears that, during the past year,

out of one hundred and nine towns eighty-seven were teaching the War and twenty-two were not. In some schools a separate period was given daily to a study of all the ascertainable facts; in others the events of the War were touched on during the history and geography lessons. We hope the American teachers related to their pupils that, whilst in June 1915 the Germans were settling the amount of the indemnity that Britain would pay, in June 1916 they were discussing the best way of making their clothes out of nettles. The writer of the note in question holds that to neglect so great an opportunity as the teaching of the present War affords were a pedagogic crime; but, as he seems to think that, when a murder is committed, the murderer and the murdered are both criminals, he can hardly be accounted an authority on crimes.

The National Education Association held its fifty-fourth Annual Meeting in the City of New York, July 1-8. It is stated that the enrolment was about 30,000.

The N.E.A. For next year the place of assembly proposed—the final decision rests with an executive committee—is Asbury Park, Portland, Oregon; and the president elected is Dr. Robert J. Aley, President of the University of Maine. Upon the events and products of this year's meeting we may discourse at a later time.

FRANCE.

Hitherto for the carrying on of the work of Continuation France has been accustomed to rely mainly on the voluntary efforts of her primary teachers. A list of rewards to men and women teachers for instructing adults and taking part in work supplementary to that of the school appears in the *Bulletin administratif du Ministère de l'Instruction publique*, No. 2235. Silver-gilt medals, silver medals, bronze medals, books, money prizes—the State does well in bestowing these recognitions of service rendered. But in France and in England, if we are to compete industrially with the Germans, there must be a change after the War, and for voluntary teachers and voluntary pupils we must have an organized system of obligatory Continuation. That for boys and girls who have left the primary school. And experts in France and England know of what vast importance is the proposed extra year in the primary school, with vocational guidance and generalized vocational instruction. We read of inquiries in England into the teaching of science, of modern languages, and so forth. There is no sign that our Board of Education has any real grip on the problems of Continuation.

CAPE OF GOOD HOPE.

Measures to give effect to the Education (Language) Ordinance or *Onerwijs (Taal) Ordonnantie* (if we, too, must be bilingual) of 1912 are reported. At a recent sitting of the Provincial Council it was decided

Towards Bilingualism. to appoint organizers for the purpose of assisting School Boards in the application of the Ordinance, and four have now been nominated, two to visit the Eastern, two for the Western, part of the Province. An itinerary will indicate to each Board when the intended visit of the organizers, whom the circuit inspector is to accompany, will take place, and a meeting between them and the teachers is to be arranged. Furthermore, a Lower Bilingual Certificate (*Lager Tweetalig Diploma*), in the first instance, is offered to teachers, and examiners will proceed to the various Districts of the Province in order to subject candidates to a simple test. It is deemed advisable that this examination should be taken by all teachers; but those whose professional certificate shows that they have already been examined in teaching through either Dutch or English are exempted from a further test in that language. A Cape Inspector points out the importance of having the same grammatical terminology for English and Dutch.

ORANGE FREE STATE PROVINCE.

Of the Teachers. The latest Report on education in the Province relates to the period of storm and stress, December 31, 1912–March 31, 1916; yet educational progress is recorded in it. Justly does the Director lay down that education is a supremely valuable instrument of national unification, which should be left to do its work, immune from racial and political influences. To see how it has been working we look first at the teachers, of whom there were in the service of the Department 425 (293 men and 132 women) more at the end of 1915 than at the end of 1912. They were better paid as well as more numerous. The Normal Training College made great strides during

the triennium under review. Since the School Act calls for bilingual teachers, students are not now admitted to a regular Teachers' Course unless they hold qualifications both in English and in Dutch, and can follow instruction in either language. When the Rebellion of October 1914 broke out, the Education Department endeavoured by means of a circular to keep the teachers at their posts. To many the admonition came too late, and they joined the insurgents. As a consequence, seventy-nine were suspended from their duties, and only twelve have been reinstated.

Of Education generally. The total number of children attending the public and aided schools of the Province on December 31, 1912, was 25,391; by December 31, 1915, it had risen to 30,846. But the Education Department is

aware that much remains to be done before educational facilities are provided for every child of school age. In the three years 105 new schools arose. A Special Commission has been considering the means of relating education to practical life. As to religious instruction, the Department is hostile to all attempts to drag the subject into the region of controversy. In the domain of secondary education continued progress is announced. Native education costs the Province £4,000 a year, and native schools are attended by a growing number of children.

Some Defects. The Director of Education indicates defects and failures as well as signs of progress. It has not been possible, for lack of funds, to appoint either a Woodwork Inspector or a Medical Inspector of Schools.

The same cause has delayed a Conference of School Boards. The practice of summarily closing schools upon the outbreak of some mild form of sickness is to be deprecated. The general impression that the Report leaves is that of hopeful effort in a vast and stubborn field.

INDIA.

According to *Indian Education* (XIV, 12), schoolmasters complain from time to time of the conditions of their work—that the classrooms are too small, the classes too large; that the books in use are unsuitable; that useless lumber and broken apparatus are not removed from the schools. Teachers at home have been known to make similar laments. More serious is the grievance of the Indian boy, to whom the avenues of promotion are closed if he does not know English, whilst the schools do not teach English up to a serviceable standard. Hence the rush to Matriculation and a University training that lasts until the student is twenty-two years of age. The education that has been provided for India has hitherto been, in too large a proportion, literary. An application of the principles of Vocationalism and much vernacular instruction in the practical sciences—should not India have these things as a reward for her recent services?

What India wants. Technical education is, above all things, what India needs and desires. Thus one of the objects of the All-India Hindu Sabha is the promotion of technical and commercial enterprise, and, to collect relevant information, it has issued a circular containing a number of questions relating to the technical and commercial education of the Hindus. An Indian Polytechnic has been established at Kangur-gachi Maniktolla Road, Calcutta. Again, a vast development of agricultural education is urgently required if the economic welfare of India is to be secured. Whether the time has come for a general system of free and compulsory primary education throughout India—Baroda already has compulsion—that is a question to be answered not by *doctrinaires* in England, but by Indian experts after a close study of the whole situation and, in particular, of the cost. India might groan when she came to foot the bill. For the present we must be content to report a growing, but by no means unanimous, demand for compulsion.

European Ignorance of Things Indian. The Editor of *Indian Education* (XV, 1) complains of the general ignorance of India that prevails in Europe. Let us quote his pungent words. "That great reconstructor of all things mortal, Mr. H. G. Wells, has been recommending that the British Universities should start chairs of 'Hindostani' to keep our young generation in touch with India. Presumably he thinks Hindostani is the language of India. It seems to be a fixed dispensation of providence that the wisest men should always talk nonsense about India. The other day we were reading a play of Sudermann, the foremost of recent German writers—and Germans are accurate people—behold, he refers to the many-armed and many-legged divinities of India. So Mr. Wells is in good company and no doubt his words will pass for the far-sighted wisdom of a broad and sympathetic Imperialism."

IN WOOD WAYS.

NO human sound breaks in upon the live stillness of the August afternoon; but the lonely place is filled with presences. The peaceful gurgle of the brook among dark-mossed boulders, and the fuller rush of the little waterfall further down the hollow, entirely take the ear, until another world of sound is distinguished—a many-toned and murmuring world of creeping things and flying things innumerable; then the voices of the water are there in the background, soothing and abiding, like eternity.

The fresh springs and "full-flowing rivers" of song heard earlier in the year, have lessened into lazy tricklings and desultory droppings of melody, into tiny contented ripples of music; instead of the haunting note of the blackbird, passion-full, I hear the minor plaintiveness of the yellowhammer's broken beat, the warm air is stirred with tweet and twitter and chirrup from among the bushes, the stillness is alive with wings. There is a sudden dart of azure flight, and a great dragon-fly hangs a-quiver, while I scarcely breathe; the big bee gives me a comfortable glint of orange back as he plunges into a clump of ragwort. I see the flirt of a tiny russet tail, and a little warbling hop o' my thumb flits daintily in and out among the bushes that edge the stream. Only the old mill—half in ruins—whose name was known a hundred, fifty, years ago, is at rest. Its day is done. The great wheel throbs no more.

The dahlias in the farmhouse garden give me a glowing welcome, but in autumnal tones that subdue a little while they please. I am delighted with the soft browns and buffs of the well-fed fowls who wander on to the grass plot from here and there; but their table manners are shocking, and they are ungainly creatures when they run greedily after crumbs; besides, they are far from restful—with their nervous jerky movements they are like a fussy overworked female. I like better to watch the cows in the meadow beyond.

As afternoon grows late, the pine woods allure with their religious solitude. I can think of no more fitting place for summer vespers; and to see the sunset, fiery red, behind the forest of dark straight stems is to go a-Sundaying with God. Trees! I have seen this very day a beech, whose smooth and shapely trunk, green-spotted with lichen, might well have been a column of some rustic temple; while of others the sturdy enormous girth could be compared to nothing but the British Constitution. And to lie under an oak-tree, looking up at its home of greenery when the sun is hot, is one way of proving that life is really a pleasant thing, and our earth a goodly heritage. Under the yew-tree's shade, in spite of churchyard suggestions, I feel old deities near and breathe the fragrance of old romance. The rugged elm is like a loyal time-tried friend. And who has not seen the wild wood-maiden's tresses drooping from the silver birch?

Though it is August, the "summer-time" evening is long, and I sit on the forest hillside deep in bracken, and drink my fill of the purple heather's purity of colour seen in the clear warm light. The gorse is scarce now. Look at it on the common or hillside at June's hot midday under the blue of a June sky, and you see one of God's own sights.

I would have my home always near running water or "the peace of lakes" among lonely hills. And the voices of hidden streams and tiny waterfalls haunt me as I climb down the prickly slopes and cross some fields to take the honeysuckled lanes.

The light is paling, and thatched roofs and rambling roses and hollyhocks greet me with the sense of home; but I stay to watch the black and white magic of the swallows' darting flight about the eaves. . . . The swallow is of all times and for all time. He brings with him the ages, their deathless loves and everlasting songs. . . .

A dusty road, winding white between dark trees, leads down towards home. The rose-flushed west is dying into amethyst, a young slip of moon hanging in the southern sky gleams silver through the fir-trees. The evening moth is a-dance on the scented air. "Oh, world as God has made it."

From the camp on the common comes the bold compelling note of the bugle-call. Then I remember that a company of the Royal —shires are leaving early to-morrow morning for the Front.

* * * * *

It rained heavily during the night. This morning the sky is grey with broken clouds, but the air is fresh and sweet, and from the clump of trees which corner off my garden a continual rain of music drops. Now and again a russet-throated warbler darts into view, and, perched on fence or red roof-edge, gives me a round of song all for myself, and a minute's cheer from his gay presence. Little Redbreast, you will not be far away from me now, while the days get shorter and the air keener, until, when the world of wood and hedgerow is almost bare, and smoke goes up from the stubble-field, and life is hidden within dark tree and under darker earth, you will perch on naked bough or solitary evergreen, and ripple to us ever as the light fades and the sun hangs his low red round; and I shall be content, like you, with the gathering shadows, and look back not over-much on the white dancing hours of spring and the blue summer noons. . . .

Is there anything so wonderful in God's world as our western year with its orderly procession of times, the changing pageantry of sky and earth, and the attendant creatures ministering with responsive voice! And lo! almost before the one season has time to gather up her train for noiseless passing, our hearts and eyes are given to the new-comer, yet not ungrateful to the memory of her whose back is turned.

"Thou hast thy music too," we say to misty autumn; and the voice of winter is not merely harsh and loud. And if our thoughts cannot dance with the butterflies' wings, they may glow by the hearth of Yule.

* * * * *

I can never apply our moral standard to the birds; and when wise people tell me of the greed of this one and the cruelty of that, of the quarrelsome nature of the one species and the thieving propensities of the other, I pay no more heed than I do to those who would pull me a flower to pieces and discuss its anatomy in learned terms. But I really cannot forgive you, my starlings, beautiful creatures as you are, for this deed of rapine, done beneath my very window and under my very eyes.

A few days ago the rowan-tree in the garden was a goodly sight with russet clusters that soon would glow in autumn scarlet. Now the tree stands bare—bereft of fruit, with only headless tufts to mark where once the berried clusters shone. Search the branches high and low, you would not find a single fruit overlooked by the greedy plunderers. All day long they flew in and out, chattering, scolding, gloating over their sweet and stolen feast. And they not even to wait till the fruit was ripe! And so much colour robbed from my landscape! I wonder, will Nature take amends from one of her kind on behalf of another kind? And, oh, why cannot I invoke the shade of William Wordsworth to send down to ill fame these "snatching songsters," "ethereal pilferers" (as he would call them), in a set of philosophic verses? A. D. S.

MESSRS. JARROLD & SONS are publishing immediately a pamphlet by Sir Dyce Duckworth, Bart., M.B., F.R.C.P., under the title of *Women's Place in the World*. It is a report of his address delivered before the Women's Diocesan Association, and is issued in pamphlet form by special request. At the present time, when thousands of women are undertaking work hitherto done by men, Sir Dyce Duckworth's outspoken opinions open up a controversy which is interesting in all its bearings. The published price is 1s. 6d. net.

THE following pupils of the Uplands School (Church Education Corporation), St. Leonards-on-Sea, have passed the London University Senior School Certificates with Matriculation exemption:—G. Chesshire, with distinction in History and French Oral; B. Mackenzie, with distinction in Latin and French (written and oral); R. McNeile, with distinction in English and French Oral; C. Meade, with distinction in History; W. Nicholson, with distinction in Mathematics and English. In the Senior Oxford Local Examination the results were: Third Class Honours—G. Poole; Pass—M. Abell, K. Hill, D. Tugwell.

OBITUARY.

FRANCIS WARRE CORNISH.

ALL Etonians and a wide circle of intimate friends will grieve at the death of the late Vice-Provost on the last Monday of August. For nearly sixty years Eton had been his home. Elected on the foundation in 1853, he gained the Newcastle Scholarship in 1857, and proceeded in due course to King's College. At Cambridge he carried off the Battie University Scholarship, and graduated as third in the Classical Tripos of 1861, the year when Abbott, afterwards Head Master of the City of London School, was senior; G. O. Trevelyan, second; his fellow Kingsman, Austin Leigh, fourth; and Douglas Richmond, fifth Classic. The same year he was appointed by Hawtreys to an Eton Mastership, which he held for thirty-two years, when he succeeded Wilder as Vice-Provost and College Librarian. By reason of years and failing health he resigned this post last April, and died at a house in the neighbourhood lent him by an old friend.

Of a singularly gentle and lovable nature, he had many friends and no enemies. In politics, domestic or educational, his voice was never heard, and he will be better remembered as a writer than as a schoolmaster. Thus, though he retained his close friendship with Mr. Oscar Browning, he took no part in the stormy quarrel which led to the latter's dismissal in 1875. He was an original member of the U.U., a club well known to our readers, and an occasional contributor to the *Journal*. His quiet humour and playful satire were conspicuous at these symposia of public-school masters.

Of his multifarious writings some account may be found in the appreciative *Times* obituary, but his *Concise Dictionary of Greek and Roman Antiquities* deserves a word of praise, and one of the latest and most characteristic, *Jane Austen in "English Men of Letters,"* is not mentioned. He there acknowledges the inspiration that he drew from the domestic circle, and his daughters in particular. Never, in spite of differences of creed, was there a more devotedly attached or mutually dependent family. The death of his eldest son Francis, a young man of great promise, was a blow from which he never wholly recovered. His novels, *Sunningwell* and *Darwell Stories*, were reminiscences of boyish days when his father was rector of a Somerset parish, and afterwards of Bakewell. Somerset was his favourite county, where he had hoped to end his days. Another work deserves notice as a record of the inner life of Eton—*The Letters and Reviews of William Cory* (the author of *Ionica*), edited for subscribers.

Though partly paralysed he retained his mental powers to the end, and he might have written as his last word Arnold's favourite sentence—*ἐχθίστη ὁδὸν πολλὰ φρονέοντα μηδενὸς κρατεῖν*.

ALBERT WILHELM SCHÜDDEKOPF.

We chronicle with deep regret the death at Harrogate, where he had lived after his retirement, in his fifty-fifth year, of Dr. Schüddekopf, born at Göttingen, and educated there. He came to England, 1887, with a brilliant reputation as a linguist, and after a year's teaching in the Newark Grammar School, was appointed Professor in German at Bedford College, London. After two years in London, he went as Lecturer in the Yorkshire College, and seven years later, when the College became the University of Leeds, he was appointed Professor of the German Language and Literature, a post which he held till his retirement in 1914. From the first he took kindly to English life and habits, and was a leading member of the Modern Language Association. His only son joined the Forces, as one of Kitchener's army. The Professor's name appeared among the contributors to the series of "Idola Pulpitorum," and when, in 1914, the War broke out, he expressed his deep regret at not

fulfilling his engagement. He had much to say that needed to be said, but, after consulting friends, he was convinced that this had better come from a born Englishman. "So far," he wrote to the editor, "we have been treated with the utmost kindness and even affection, but we feel the strain keenly, and the newspapers—some of them at least—are not generous." Last year he joined with others of his naturalized compatriots in a public expression of his loyalty to this country.

A colleague writes the following short appreciation of the late Prof. Schüddekopf's work:—

For more than thirty years Prof. Schüddekopf was the most distinguished representative of German studies in Leeds and in that large part of Yorkshire which is served by the University of Leeds. He was one of a group of men who brought into the English Universities some of the ideals of the German. He and his fellow-workers have rendered to English culture a service, different, indeed, in its method and scientific range, but comparable in historical significance to that which the emigrants at the time of the Revolution rendered to England at an earlier date in the study of the French language. Like them, they have been not only teachers of a foreign tongue, but representatives of a foreign culture.

Prof. Schüddekopf took an active part in University affairs. He was an admirable chairman—just, genial, and well-prepared. For many years the Northern Universities Joint Matriculation Board had his active co-operation. As external examiner in German, he visited many other Universities, and was one of the links which bind their work together. In University Extension teaching he found from time to time further scope for his energies. No one did more towards making Yorkshire people understand the many-sided activity of the new German Empire and the significance of its institutions. He built his hopes upon a permanent friendship between Germany and Great Britain. He appreciated the good and the weak points alike of German and English life and culture. He knew that each country had much to learn from the other. He hoped that there would be some kind of synthesis of their different excellences. The War, for the time, shattered his hopes. The tragedy of it killed him. M.E.S.

GEORGE TOWNSEND WARNER.

By the somewhat sudden death of Mr. G. T. Warner in his fifty-second year Harrow loses one of its most distinguished and popular masters. The son and grandson of Harrovians, he passed himself from Harrow with a scholarship to Jesus College, Cambridge; was senior in the Historical Tripos of 1887, and as a B.A. gained the Lighfoot Scholarship and the first awarded Whewell Scholarship in International Law. In 1890 he was elected Historical Fellow of his College, and the next year joined the Harrow staff. As a writer he first attracted notice by *Landmarks in English Industrial History*, and in 1898 became joint editor of *Harrow School*. In 1903 he was appointed, by Dr. Wood, Master of the Modern School. To the growth and prosperity of the modern side under his guidance and teaching abundant testimony comes not only from his pupils but from the present Head Master. In his originality and independence as a teacher he rivalled his predecessor in the post, Edward Bowen, and he added a power of organization. Unlike Bowen, he was given by his chief a free hand, and he used it warily and with discretion. At the time of his death he had undertaken an historical work for the Foreign Office, and we may say without exaggeration that we deplore a national loss.

EDWARD DANIEL STONE.

We regret to announce the death of the Rev. E. D. Stone, a veteran Eton Master. He entered Eton as a King's Scholar the school. In 1851 he proceeded with a scholarship to King's in 1845, where he won the Newcastle and became captain of College, returning to Eton as an assistant master in 1857. After twenty-seven years of strenuous work as a tutor and house master he resigned to start a private school near Broadstairs, retiring after eleven years to a life of studious ease. He died at Radley, where his son is an assistant master, in his eighty-fourth year. To the world of scholars he was best known by his compositions, original and translations, in Latin and Greek verse. In the weekly Prize Translations of the *Westminster Gazette* for some years he took the lion's share.

Important Announcement

The Times **EDUCATIONAL** **SUPPLEMENT**

which formerly appeared on the
first Tuesday of every month

IS NOW ISSUED
WEEKLY on THURSDAYS
Price 1d.

By more frequent publication *The Times* Educational Supplement will be better able to focus current public opinion upon Educational Reform, as well as to take its share in formulating an Educational Policy which, whilst conserving what is best in our present system, shall be more satisfactorily adapted to the National Requirements of the Future.

Cambridge Technical Series.—Alternating Currents in Theory and Practice. By W. H. N. James, A.R.C.Sc., A.M.I.E.E. *Cambridge University Press*, 10s. 6d. net.

(Continued on page 582.)

Telephone: Mayfair 3850.
Secretary: Miss A. C. Franklin.

Headquarters of the Corps:
50 UPPER BAKER STREET,
LONDON, N.W.

Women's National Land Service Corps.

President: HIS GRACE THE DUKE OF MARLBOROUGH, K.G.
Chairman of Executive Committee: Mrs. ROLAND WILKINS.
Hon. Treasurer: The Hon. Mrs. NORMAN GROSVENOR.

APPEAL FOR

Recruits for Agricultural War Work.

1,000 EDUCATED WOMEN wanted at once
FOR THE PERIOD OF THE WAR.

- (1) Skilled milkers and those used to farm work.
- (2) Partially trained workers.
- (3) Untrained women who can either :
 - (a) go on the land at once in squads ;
 - (b) receive a six weeks' training first.

Short trainings of four to six weeks are provided for applicants who can afford to pay maintenance fees ranging from £1 to 25/- a week; a limited number of free trainings are given.

At the end of the training girls will be placed out either singly, or in squads of four or five, to work for farmers in various parts of the country at the local agricultural rates.

The Women's National Land Service Corps is recognized by the Government as the central voluntary body for enrolling girls and women of the professional and leisured classes for work upon farms; and will co-operate with Women's County Committees in this connexion.

The DEMAND for such workers is increasingly insistent, and RECRUITS ARE URGENTLY NEEDED.

All who are able to undertake this work, which is of the GREATEST NATIONAL IMPORTANCE, are invited to send in their names to—

THE SECRETARY,
Women's National Land Service Corps,
50 Upper Baker Street,
London, N.W.

Interviews: 10.30-4.30;
Saturday 10.30-12.30;
or by appointment.

DRUMMOND LATHES

Are right at the Front.
The important part played by Lathes in the present war cannot be exaggerated. A knowledge of Lathe Work means that at all times you are "Right There" and your services indispensable. DRUMMOND LATHES stand for the "HALL MARK" of Accuracy, and in the education of all a good knowledge of Lathes and their uses is invaluable. The 3½ in. Lathe illustrated below is low in price, but capable of the highest class work.

LECTURES AT ST. MARTIN'S-IN-THE-FIELDS.—We have been requested by the Vicar to announce the following lectures, to be delivered during the month, at 6.30 p.m., on Wednesdays and Fridays, beginning on October 4:—October 4, "The Christian Responsibility of Empire," by Dr. G. R. Parkin; October 6, "The Church and the Labouring Man," by Prof. Alex. Irvine; October 11, "A Churchman and his Investments," the Rev. the Hon. Canon J. G. Adderley; October 13, "A Churchman's Outlook from the Navy," Rev. W. J. Carey; October 18, "The Church and Women," Mr. John Lee; October 20, "The Church and the Schools," Dr. M. E. Sadler; October 25, "Disestablishment," Mr. Douglas Eyre; October 27, "The Secular State and the Teaching of Religion," Dr. M. E. Sadler. The lectures are intended by the Vicar to promote free discussion and preparation for the Conference which he has deferred till the spring.

BEDFORD COLLEGE FOR WOMEN.—The course of training in social work will open on Friday, October 6, when Mr. J. St. G. Heath, Warden of Toynbee Hall, will deliver an opening lecture at 5 o'clock. Admission is free.

MESSRS. LONGMANS, GREEN, & CO. announce for early publication *The Elements of Military Education*, by Mr. W. A. Brockington, M.A., Director of Education for Leicestershire, and Adjutant to the 1st (Grammar Schools) Cadet Battalion, Leicestershire Regiment. Though primarily intended for use in public and secondary schools which have Officers' Training Corps and Cadet contingents, it is probable that military instructors generally, together with Volunteer officers, members of Cadet officers' schools, senior Cadets, and also Scout officers, will find many sections of the work of considerable interest and service to them. The book provides a series of practical courses of instruction in drill, the training of the eye, the use of the rifle, signalling, and particularly in minor tactics. At the same time, the author indicates the relationship existing between the ordinary curriculum of the public or secondary school and the elementary requirements of military education.

Environment: A Natural Geography.

By G. R. SWAINE, F.R.Met.S., Geography Master at the Manchester Warehousemen and Clerks' Schools. Crown 8vo. Cloth. 224 pp. Price 1s. 9d.

The World in Natural Regions treated under the following sections:—

I. The Polar Regions. II. The Cool Temperate Regions. III. The Warm Temperate Regions. IV. The Hot Lands.

The primary aim is to show the intimate connexion between man and his geographical environment, and special attention is paid to the climatology, structure, and general physical condition of each region. The origin and development of towns are fully dealt with, and the influence of environment on plant and animal life is made a special feature.

Regional Geography of North America.

By ELLIS W. HEATON, B.Sc. (Being Book III of "A Regional Geography of the Six Continents.") Crown 8vo. Cloth. 102 pp. With 25 Maps and Diagrams and 11 Photographic Plates. Price 1s.

Suitable for those taking **The Mississippi Basin**. Treated under Seven Sections as follows:—The Valley of the St. Lawrence and the Plateau of the Great Lakes, The Frozen North and the Dry Canadian Interior, The Rocky Mountain Cordillera and the Pacific Seaboard of Canada, the Atlantic Seaboard of the United States (with two subdivisions), **The Basin of the Mississippi**—The Interior of the United States (with four subdivisions), The Rocky Mountain Table-lands and the Valleys of the Pacific Seaboard (with three subdivisions), The Republics of Central America and the West Indian Archipelago (with five subdivisions).

Regional Geography of Europe.

By ELLIS W. HEATON, B.Sc., F.G.S. Price 1s.

Crown 8vo. Cloth. 135 pp. 45 Maps and Diagrams. Suitable for those taking **CENTRAL EUROPE**. Treated under Ten Sections as follows:—**Arctic Europe**, **The Colder Atlantic Border**, **The Baltic Basin**, **The North Sea**, **The British Archipelago**, **The Warmer Atlantic Border**, **Switzerland and the Alps**, **The Mediterranean**, **Danubian Countries**, **The Great Plains of Russia**.

The Monsoon Region of Asia.

By ELLIS W. HEATON, B.Sc., F.G.S. Crown 8vo. Cloth. 88 pp., fully illustrated with 31 Maps and Diagrams, and 12 Photographic Illustrations. Price 10d.

"The author has again shown his ability in rendering his information attractive to readers. The facts are expressed in simple language, and data are obtained from recent sources, while the diagrams and other illustrations are numerous and well chosen."—*The Athenaeum*.

Plant Study in School, Field, and Garden.

A textbook on Rural Science and Gardening. By J. S. BRIDGES, B.Sc., F.C.S., and A. J. DICKS, B.A., B.Sc., F.L.S., Head Master of Walthamstow County Secondary School. Crown 8vo. Cloth. 432 pp. Price 3s. 6d. net.

This textbook is of an experimental nature, and free from difficult terms and Latinisms. Practical Exercises and a Summary appear at the end of each Chapter. The Book is profusely illustrated with over 600 original drawings.

Inorganic Chemistry.

By S. W. BURNELL, LL.B., B.Sc., and A. J. DICKS, B.A., B.Sc. Crown 8vo. Cloth. 376 pp. Price 3s. 6d.

Recent developments of the science are adequately treated, volumetric and gravimetric exercises are freely introduced, and many illustrative calculations are fully explained in the text. Questions and further exercises are appended to each chapter.

A Digest of British History.

By S. H. McGRADY, B.A. With an Introduction by OSCAR BROWNING. Crown 8vo. Cloth. 320 pp. Price 2s. 6d.

Also published in three parts as under:—

Part I.—**B.C. to 1485**. Part II.—**1485 to 1789**. Part III.—**1789 to 1912**. Price 1s. each. (No specimen copies.)

This Note Book aims at a scientific treatment of British History. The days when lessons consisted of lists of dates of battles and the lives of favourites are nearly over. To teach the pupil to dig beneath the facts, to reason out for himself causes and results, to see that there are two sides to every question, to realize the eternal march of progress—this is the spirit of History.

SCALE OF CHARGES FOR ADVERTISEMENTS.

PUBLISHERS' ANNOUNCEMENTS—

Whole Page	... £5 10 0	One Column (½ page)	£3 0 0
Half Column (½ page)	1 15 0	One-Eighth Page	0 17 6
Per Inch in Column, 8/-.			

SCHOOL ANNOUNCEMENTS—

Scholarships, Official Notices, School Transfers, Partnerships, &c.—6d. per line; minimum charge, 5s.

Posts Wanted or Vacant.—30 words for 2s.; each 10 words after, 6d.; *prepaid rate*.

Lectures, Classes, Non-Resident Posts, &c.—48 words for 3s.; each 8 words after, 6d.; *prepaid rate*.

An extra fee of ONE SHILLING is charged on advertisements with OFFICE ADDRESS.

If a receipt is required for an advertisement under 10s., a post card or a stamped envelope must be enclosed.

[Advertisers are reminded that "Letters addressed to INITIALS or to FICTITIOUS NAMES, or to a CHRISTIAN NAME without a SURNAME," at Post Offices are not taken in, but are sent at once to the Returned Letter Office.]

All Letters respecting Advertisements and Subscriptions should be addressed—"THE PUBLISHER, THE JOURNAL OF EDUCATION OFFICE, 3 BROADWAY, LUDGATE HILL, E.C." Money and Postal Orders, on the Post Office, Ludgate Circus, E.C., should be made payable to WILLIAM RICE, JUNIOR: Orders and Cheques may be crossed, "The London City and Midland Bank, Ludgate Branch." *Postage stamps can only be received at the rate of thirteen to the shilling.*

Notice must be given of all remittances through the Post Office from abroad, stating full name and address of the sender; and all Foreign Money Orders must be crossed for payment through a Bank.

Date of publication of next issue will be found at top left-hand corner of front page.

LONDON:

WILLIAM RICE, JUNIOR, 3 BROADWAY, LUDGATE HILL, E.C.

THE REV. W. TEMPLE AT THE BRITISH ASSOCIATION.

MR. WILLIAM TEMPLE is a genuine democrat, and it is mainly as a promoter and leader of the Worker's Education Association that he has won for himself a well merited reputation. But as we study his Newcastle Address the conclusion is forced upon us that he is both by nature and nurture a cleric, and that he regarded his brief head mastership only as an interlude in his career as a stepping stone to higher things. With his opening claim for the Humanities, in the broadest sense of the word, as the one foundation on which to build a liberal education we cordially agree, but the rest of his address convinces us that we move in different planes, that Mr. Temple has never thought out the problem of National Education. His proposed curriculum for the ideal secondary school leaves much to be desired, but, even if we accept it, what guidance does it offer towards determining the national school of the future? The training college, he tells us—and this is his last word—is the key to the whole position, and we must see to it that the instruction thus given is not only moral but religious. Apparently training colleges are to be wholly State-supported, but of the tests to be imposed on the professors and the students not a word is said. All we are told is that Religion taught apart is worthless; it must govern all teaching. All we need here remark is that, to embody so sweeping a reform in the statute book is at this time of day chimerical. And the same objection applies even in a greater degree to any proposed reformation in schools. German schools are still strictly denominational; American schools are strictly secular. If we judge them by their fruits, which shall we prefer!

Theology may be, as Mr. Temple maintains, the Queen of the Sciences, and it may be a grave error on the part of the

British Association not to have yet established a Theological Section. As it is, education is treated as a science, and the first qualification demanded of the teacher is that he knows the subject he professes to teach. This may seem a postulate to which all would subscribe, yet we see it violated, not only by the appointment of uncertificated masters and mistresses, but by episcopal head masters, who openly proclaim that for University men normal schools are a vexatious vanity, and that the theory of education is nothing but a number of platitudes that can only be of speculative interest to a master in a public school. It may be said that we are referring to a past generation, but an instance of the heresy we are denouncing is furnished by the press of to-day. Within the same week that the British Association was sitting the Bishop of London addressed an open-air meeting on the subject, "Why do I believe in a good God?" His first appeal, we read, was to Natural Science. "Why," he asked, "are we not blown off this earth as we rush through space at ten miles a second?" The answer was: "Because Someone had wrapped seventy miles of atmosphere round the earth. The most credulous person was the man who could believe that that happened by accident." So the Bishop is reported in the *Times*, and the question that naturally suggests itself is whether Mr. Temple would be prepared to accredit Dr. Ingram as a teacher of that Natural Theology whereby alone he can bring his scholars to the ultimate goal—the realization of Goodness, Truth, and Beauty. If he agrees, we would inquire further whether he would be content with Goethe's rule of life: "Im Guten, Schönen, Ganzen resolut zu leben," and his apophthegm, "Wer Wissenschaft und Kunst besitzt, der hat Religion; wer weder Wissenschaft noch Kunst besitzt, der habe Religion." Is not this the utmost that the State can demand of its teachers?

HIS HOUSE IN ORDER.

By P. SHAW JEFFREY.

I SUPPOSE all of us who are interested in education are wondering what will happen when the doors of the passage of Janus are finally closed and the god of two faces turns his key. Are we prepared for peace in matters of education, or are we going to muddle through in our stolid British way? The world is changing under our unobservant eyes. A new generation is knocking at the door, and its wants are paramount and imperious. These must be met in a liberal spirit and, with our reduced resources in men and money, some drastic reforms in our organization will be required if the men and the money are to suffice for our needs. The object of this memorandum is to call attention to a source of weakness in our present educational system and to suggest a remedy.

We are all agreed, I think, that the influence of the Board of Education has been of late years beneficent, and that inspection has appreciably increased the efficiency of our secondary schools. The Inspector has been for most of us more like a friend than a husband, and we should be sorry to revert to the days when every head master was a law unto himself. We are prepared, I think, for a further step forward, and, if our educational system is to be finally established on a sound basis, this step should be taken.

Let us consider briefly the present state of affairs in grant-earning secondary schools. We submit to the Board our schemes for a four years' course in all subjects. With the aid of the various memoranda on specific subjects issued from time to time by the Board of Education we are able, by using our diligence, to draw up attractive and satisfactory courses which, after the requisite interval for criticism and suggestion, are finally approved by the Board. Some of us print them, and there is no doubt that on paper they look splendid, and any boy who can properly work through the approved courses might consider himself within these limits well grounded. When, however, we come to put our

theories into practice, we are faced with a serious and at present insurmountable difficulty—the difficulty of by-term entries.

Any University man who has entered his college as the writer did, in a by-term, knows the awkwardness of the position of the by-term freshman, but this difficulty in a University course can be got over by a liberal dose of private coaching. It is a difficulty, but not irremediable. In schools, however, the case is altered. If the school is on the up grade there is a constant flow of new boys each successive term, all or most of them equally ignorant, and, further, in all stages of ignorance from complete vacuity to educational dyspepsia, for the motto of the new boy is most frequently: "Ce que je sais je le sais mal, ce que j'ignore je l'ignore complètement."

The new boy who comes in September is a term ahead of the new boy who enters in January as regards his four years' course, and the new boys who enter in May are two terms behind the September entries and one term behind the boys who came in January, so that in every year's entry the new boys ought by rights to fall into three distinct groups. If the school is a very large one it may be possible to shepherd the new boys into separate folds, but for the average provincial grammar school of about two hundred boys the staff would have to be increased to about double its normal strength if the necessities of each successive group of entries were to be properly met.

In practice head master and staff do the best they can; they resign themselves with all the fortitude they are capable of to teach forms in which boys constantly have to be moved up to higher forms on account of pressure from below, without any real consideration as to whether they have mastered the course marked out for their original form, so that it is no uncommon thing for a boy who sets out to work through a year's course in one form to be moved up to another after only two terms' work, and the result cannot be anything but confusion for the forms and the individual.

If no promotions are made in the course of the year, it will be found in practice that the higher forms by the end of the year grow less and less in numbers owing to boys leaving, while the lower forms grow inconveniently large owing to the terminal entry of new boys; so that, unless the funds of the school permit of an increase of staff, it becomes necessary to make promotions each term to avoid an unseemly block in the lower parts of the school. Under these circumstances well defined yearly courses of instruction are impossible, or rather the courses can be given, but it is certain that all boys in any given form cannot profit equally as they should do, because they have not all, owing to the pressure of promotions, had equal opportunities. In a word, we are now muddling through, and muddling through is not good enough for the generation of boys who will have to make good the ravages of War.

The Board of Education—or, indeed, any Educational Authority or any Board of Governors—can, however, alter the whole situation for the better by waving their fairy wand. Let it be clearly understood in future that grant-earning schools only admit new pupils at the beginning of their school year, and at no other time. The situation would be changed at once. Forms would be determined at the beginning of each new school year, the unfortunate pressure of promotion would die away, and it would be possible to group the boys of the school in their separate years and work through the full course with certainly better results, both for pupils and teachers. Why should we be the last of all the nations of Europe to adopt this very obvious and rational procedure? This is one of the questions to which, in Parliamentary language, no answer is returned; the only answer the harassed schoolmaster could supply would certainly be unparliamentary.

I may be told that the scheme would never work, that parents would not submit to it, that undesirable private schools would increase, that the liberty of the subject to do

whatever he darn pleases in educational matters would be infringed, and so on through the whole gamut of the usual stock arguments. My answer would be that the system works smoothly in every civilized country in Europe, and that in every country in Continental Europe the average attainments of pupils are higher than the average attainments of English boys, not because our boys are inferior in intelligence, but because the system of instruction is more rational and is not constantly suffering interference from the intrusion of new pupils at all times of the year. And, further, I know of at least one district in Essex where the system of annual entries, as opposed to terminal entries, has been adopted and has worked for years, to the admiration of all concerned.

Will the Board of Education confirm the feeble knees of the faithful and help us or order us to try this very desirable reform? I am sure of one thing, that the work of our grant-earning secondary schools would improve so considerably by the adoption of this simple procedure that within very few years many undesirable private schools would be swept out of existence.

A DEAD LADY.

[AFTER ALFRED DE MUSSET.]

WAS she not fair? If yonder Night,
Entombed by Michael Angelo
To lull the pale sepulchral light
In marble, may be so.

Was she not good? If goodness lay
In the mere opening of the palms
With gifts where God has naught to say—
If heartless gold were alms.

Did she not think? If speech as sweet,
And voice as musically vain
As of a rivulet running fleet
Be token of a brain.

Did she not pray? If two bright eyes
Dropped earthward and awhile held there,
Anon uplifted to the skies,
Be counted as a prayer.

She would have smiled, if ever rose
Yet folded in the bud could stir
To take the zephyr's breath that goes
And minds no more of her.

She would have wept indeed, if e'er
The hand that on her breast lay cold
Had let the dew of Heav'n fall there,
Its clay to melt and mould.

She would have loved, but empty Pride,
Like the vain taper lit by day
For service at a coffin side,
Watched at her heart alway.

She never lived, and now is dead;
She made believe to live—that's all.
The hand that held the book unread
Has let the volume fall.

F. W. BOURDILLON.

MESSRS. CONSTABLE will publish this autumn *The Permanent Values in Education*, by Mr. Kenneth Richmond. The book is a study of the principal aims and methods of great educators in the past, viewed in relation to the conditions and needs of the present. Mr. A. Clutton-Brock contributes an introduction, dwelling upon the root cause of the tendency to neglect or to misapply the central principles of education, principles which are traced, in Mr. Richmond's chapters, from the times of the ancient Jews, Greeks, and Romans up to the age of Froebel and Herbart.

PHYSICAL EDUCATION IN OUR SCHOOL.

By T. KOBAYASHI

(Teacher of Morals and English in the Tokio Aoyama Normal School, Japan).

IT seems unnecessary for me to say what kind of physical education the Japanese normal school boys are now given, for many of my readers may have read about it. So let me here introduce what we are doing in particular in our school to strengthen our boys, in addition to or in connexion with gymnastics, games, military drill, fencing, and *jujitsu*, which are now practised in every school in this country. It may perhaps be interesting to tell you about Mr. K. Takizawa, the Principal of our school, before I enter into details.

Mr. Takizawa.

Mr. Takizawa, one of the leading educationists in this country, is an old man of sixty-three years now. Since 1881 he has been teaching at several schools, including the Higher Normal School of Tokio, and it is more than fifteen years since his installation to the present post. He says that physical education is the most important, for without health nothing great or useful can be accomplished, and no weak-bodied nation can survive the ever-increasing struggle for existence. According to him, there are four things which cannot be dispensed with, in order to make ourselves strong. They are: sunshine, air, water, and earth. This opinion of his is put in practice in our school.

Gymnastics with Naked Bodies and Bare Feet.

The students of our school are made to practise gymnastics without shirt, drawers, or anything on their feet, whether in summer or in winter, so that their bodies may be exposed to the sunshine, fresh air, and earth. It may seem to be very hard to bear the strong sun's heat, but it is not so. The students are made accustomed to the heat by degrees as soon as they are admitted to this school, and in due course of time they come to prefer nakedness to wearing clothes. It may also seem to be very hard to expose their bodies to the sharp winter air, but their exercise makes them warm, so much so that many of them become soaked with sweat even in the coldest season. Thus the skin is made strong and resistive, and used to both heat and cold. Few of our students have taken cold since this was adopted in our school. No special provision is necessary but a pond of water, at which the students may wash away their sweat and also bathe their feet, and which may be of much service in case of the outbreak of fire. Some officers of the Imperial Guard Division inspected gymnastics in our school, and resolved to let the soldiers in their regiment try gymnastics in the same way.

Morning Gymnastics.

The students live in the dormitory. Every morning, as soon as they get up, they assemble on the playground for the roll call. When it is over they practise gymnastics and draw deep breaths in the fresh morning air for some minutes. This is thought to increase their appetite and make their lungs strong and healthy.

Cross-Country Races.

Once a month we have a cross-country race, in which all the students and some of the teachers take part, and run a distance of about six miles. Those who cannot run are advised to walk. Every student records how many minutes he has taken in covering the whole course, and can therefore see whether he is making progress in running or not. This is usually held when school is over, so there is no loss of regular work. Once a year, generally in autumn, a grand cross-country race is held, when prizes are awarded to some of the first arrivals, and a champion flag is given to the class which ran the race fastest. This running exercise not only makes the students swift-footed, but also enables them to endure hardships. Some of the graduates thus trained confessed that they felt no pain in running for a long distance,

though they were heavily armed while they were serving in the army.

Cold Baths.

Cold bathing is also much encouraged in this school. Mr. Takizawa, the Principal, has been practising it for more than thirty years without stopping it even for a day. He pours several bucketfuls of cool water over himself and then frictions himself with a dry towel until he becomes hot and pink. He remains naked for some time after this, even in winter, and sweeps his garden. He says he never feels cold. His dictionary contains neither "cold" or "cool," nor its equivalents. If anybody asks him why he does not feel cold, he always answers like the Scythian philosopher: "You can endure your face exposed to the cold winter air, as your face is used to it. Think me all face!" His example is followed by many of his students. More than two-thirds of the students wash themselves with cold water early every morning, though the number of them decreases a little in winter. This also makes the skin strong and resistive.

Posture of Students.

Much attention is paid to the posture of the students in the classroom while they are at their lessons. They are required to sit upright on their seats, lest their bodies should become crooked.

Summer School.

That too long a summer vacation is rather harmful to students, especially to elementary pupils, is generally recognized among educational circles. Now there are not a few schools which give summer lessons to their scholars. In our school the students go home or to the seashore, as they prefer, in summer, though they are told to do some home tasks. But Mr. Takizawa tried an experiment of a summer school last summer in an extraordinary way with sixth-year boys of the attached elementary school. The number of those who applied for admission to the summer class was about thirty, almost all of whom attended it regularly for five weeks during the hottest season. Their daily work was something as follows: Mr. Takizawa's lecture on morals, &c., one hour; meditation, one hour; sports and games, such as tag, dodge-ball, &c., two or three hours.

The children took off their shirts, drawers, caps, and boots during their play. They soon became as black as gipsies, and yet they defied the burning sun, and played on and on in the hottest part of the day for two or three hours, without intermission or sheltering themselves from the sun's scorching rays, though all the games and sports were optional, and they were allowed to rest in the shade at any time they pleased. Mr. Takizawa called on the parents of each of the boys, and gave him such instructions as were thought fit or necessary for him in his parent's presence. According to Mr. Takiwaza and the parents, at the end of the term the pupils who had been slow and dull, became quick and bright; those who had been shy and timid, became frank and brave; those who had been lazy, diligent and patient; weak and sickly ones, strong and healthy; pessimistic ones, optimistic. The weight of their bodies grew greater. The boys who attended the term say that they preferred it because they would have had no friends to play with if they had stayed at home. They all admired the lessons they received during the term, so much so that some of them applied for admission once more this year, though they are now middle-school boys and do not attend the elementary school. Mr. Takizawa is again teaching a summer class in the same way as last year, and I hope it will also be a great success.

July 24, 1916.

OUR attention has been called to what we fear is a typical case of "penny wisdom." A certificated teacher, who has served for twelve years in a school under the Hertfordshire County Council, has received a month's notice and her place has been filled by an uncertificated teacher, the only reason assigned being War economy.

JOTTINGS.

THE Council of Bedford College for Women have made the following appointment for the Session 1916-17:—Lecturer and Head of the Department in Botany: W. Neilson Jones, M.A. Cantab., late Assistant Lecturer in Botany.

As a rule the education of German girls is in the hands of men to a larger extent than is the case in England, because in Germany girls' high schools have usually a master as the head, and the most important subjects are practically entirely taught by men. But in dentistry German women are far ahead of English women, as public opinion favours them in this profession, and many women have large lucrative practices. There are even Court women dentists who have princesses in their clientèle. An assured living at the end of complete preparation acts as a useful stimulus.

THE L.C.C. has arranged, in a modified form, its lectures for teachers during the coming year. A syllabus can be obtained from the Council's offices, and the lectures are open to all teachers, not only to those employed by the Council. This autumn there are lectures on "Economics" at the London School of Economics; on "International Law and the War," by Mr. J. de Montmorency, at the London Day Training College. The course in English continues at King's College under Prof. Gollancz, in History under Prof. Pollard, and in Phonetics under Mr. Daniel Jones, at University College. A set of lectures is to be given on "Sea Power: its Meaning and its Functions," by Mr. Gerard Fienes, and also on "Main Currents of European History, 1815-1915," by Prof. Hearnshaw, at King's College, and on "Modern German History," by Mr. Gooch, and "Belgian History and Literature," by Prof. Paul Hamelius, at University College. Lectures on "Mathematics," by Dr. Nunn and Miss Punnett, and on "Pedagogy," by Prof. Adams, are given at the London Day Training College. Dr. Walford Davies is lecturing on "Music," at the Regent Street Polytechnic.

THE Forty-first Annual Report of the Froebel Society for the year 1915 shows a satisfactory advance in all save finance. The Chairman of the Council, Mr. C. G. Montefiore, reports that an increase of at least £270 on the receipts of the current year is needed to set the Society on a safe footing, and that for this Council must look to an augmentation of members and subscriptions to the Central Society. We know of no educational association that has accomplished such solid and lasting work at so small a cost. The minimum subscription is 5s. and half subscription may be paid by members joining after June 3. Would it not be possible to issue the report at an earlier date?

THE Earl of Lichfield has been co-opted as a Governor of Harrow School in succession to Sir Kenelm Digby, deceased.

THE Third Report of the Harrow School Endowment Fund has been presented to subscribers. The subscriptions promised during the past twelve months amount to £1,626. 12s., making the whole sum promised £38,285. 11s. 8d. A legacy of £1,904 bequeathed by the late Capt. Werner, assistant master till October 1914, will be shortly paid by his Trustees.

ROLL OF HONOUR.—Captain Allan MacDougall, Royal Fusiliers, Rhodes Scholar from New Zealand, Lecturer at Bedford College, London; Captain C. P. Hill, North Staffordshire Regiment, Vice-Principal of King Edward VII School, Johannesburg; Captain G. E. H. Keesey, Rifle Brigade, Assistant Master at Wellington College; Captain P. L. Leigh, Garrison Artillery, Music Master at Liverpool College; Captain Maurice Fletcher, Munster Fusiliers, Assistant Master at Wakefield Grammar School; Lieutenant L. E. Butler, Rifle Brigade, Fellow of St. John's College, Oxford, and Lecturer in History; Lieutenant S. B. MacLaren, Royal Engineers, Professor of Mathematics at University College, Reading; Lieutenant G. R. Day, Bedfordshire Regiment, Fellow of Emmanuel College, Cambridge, and Lecturer in History; Lieutenant A. W. Scudamore Brown, Rifle Brigade, Rector of Michaelhouse Diocesan School, Natal; Lieutenant H. B. Ryley, North Staffordshire Regiment, son of the Rev. H. B. Ryley, formerly Head Master of Emanuel School, Wandsworth; Lieutenant J. A. Pearson, Royal Fusiliers, Assistant Master at Walthamstow Grammar School; Second Lieutenant E. S. Turner, Garrison Artillery, Assistant Master at Darlington Grammar School; Second Lieutenant C. Blake, Bedfordshire Regiment, Assistant Master at St. John's College, Agra, India; Lance-Corporal E. A. Peppiette, Liverpool

Regiment, Assistant Librarian at Liverpool University; Captain E. F. Prior, Rifle Brigade, Assistant Master at Eton; Lieutenant Kettle, Royal Dublin Fusiliers, well known in Irish politics as Prof. Kettle, University College, Dublin; Lieutenant W. M. Stuart Garnett, killed at a flying school, son of Dr. William Garnett, late Educational Adviser to the L.C.C. and brother of the Principal of the Manchester School of Technology; Second Lieutenant L. C. Carey, East Surrey Regiment, Art Master at the Royal Holloway College; Second Lieutenant R. M. Heath, Somerset Light Infantry, Newdigate Prizeman and Craven Fellow; Lieutenant Raymond Asquith was the fourth Fellow of All Souls College who has fallen in the War; Lieutenant E. H. L. Southwell, Rifle Brigade, Assistant Master at Shrewsbury School; Second Lieutenant A. C. Batho, Middlesex Regiment, Assistant Master at St. Cuthbert's School, Malvern; Second Lieutenant, B. A. Medley, Highland Light Infantry, son of Prof. Medley, Glasgow University.

SIX Public Lectures on "Phonetics and its Uses" will be delivered on Mondays, at 5.30 p.m., beginning October 9, at University College, Gower Street, by Daniel Jones, M.A., University Reader in Phonetics.

In lieu of the annual Calendar, the Leeds University has this year published a General Prospectus, giving in a concise form all the information needed by present and prospective students.

TEACHERS' GUILD.—In response to an appeal from the Council to members of the London Centre, over £100 has already been subscribed to enable the Guild to pay its way till the end of the financial year. It will be remembered that about £1,400 has already been contributed by members, half in donations and half in loans, to meet the expenses of moving from Gower Street to Brunswick Square. Some £400 is still needed to put the Guild on a sound financial footing. At present the Club is paying its way, and bedrooms are all let. It requires only the letting of the remaining offices to assure the financial prosperity of the Guild.

REVIEWS AND MINOR NOTICES.

The Self-Discovery of Russia. By T. Y. SIMPSON.
(6s. Constable.)

This timely book consists of a series of essays on the various aspects of Russian life, and on the problems which the War has constrained Russia to face. There are sketches of rural life and scenery, as in the chapter descriptive of "little mother Volga," in which the efficiency of Zemstvo administration under present circumstances is set forth, and the economic changes in country life are noted. Among other striking details is the growth of the co-operative movement in the smaller villages which the author visited in the Kostroma Government. In one village a membership of ninety had bought provisions to the value of 5,000 roubles in one year. In another, one hundred and twenty four members had bought to the value of 15,000 roubles. Although the Government had much to do with the starting of the co-operative movement, yet it is somewhat afraid of its powers of organization, while the Jews likewise oppose it as tending to take business out of their hands. Mr. Simpson thinks, however, that the effect of this co-operative movement, together with the spread of education, and with the enormous uplifting of the moral consciousness of the Russian people owing to the suppression of vodka, will aid in the solution of the Jewish question by enabling the ignorant mujiks to hold their own against the unscrupulous Shylocks. A member of a co-operative society must perforce act in the interests of his society, and cannot, however strong may be temptation, mortgage his next year's crop to indulge his craving for drink or change. We gather, however, from Mr. Simpson's remarks on the inestimably good effects of the suppression of vodka that this beneficial legislation requires to be followed up by some measures designed to vary the fearful monotony of peasant life in a typical Russian village by the gradual introduction of local libraries, lectures, theatres, and social meetings.

In the chapter dealing with "some economic problems" the author gives the views of a leading University Professor of Economics in Russia. This professor had been detained as a prisoner in Germany during the first six months of the War, and was treated much more leniently than prisoners of British nationality. His remarks confirm what has often been supposed: that Germany regards Russia as the enemy which can hurt her most of all the Allies, and as the enemy whom it will pay the Fatherland to conciliate at almost any cost. "Germany would make peace at once with Russia if the latter country gave the slightest hint of wishing to retire from the contest, and she has counted on this from the beginning. Germany would ask no indemnity from Russia; she would even be prepared to retire from all the Russian territory already occupied, and make a new trade treaty with Russia that would be fair to both sides." The speaker said that the Russians looked upon the War as a struggle with a nation ungrateful to the people who had practically fed them during the last thirty years. . . . "To-day there is in Russia much hatred of the Germans, not only of those actually belonging to that nation, but also of their descendants in Russia, because in their hands is a great part of the German trade. Germans, when they came to Russia, became naturalized there, or married Russians, and so formed a special class among the Russian people. . . . There are hundreds of families in Moscow who cannot speak Russian at all. Indeed, there is a special society in Moscow to propagate the German language, manners, and ideas, and to it belong many Russian subjects of German origin."

The chapter on the effect of the abolition of vodka is extremely interesting, as containing the result of questions addressed by the Statistical Bureau of the Zemstvo of Kostroma to six hundred correspondents in different districts of the Government, dealing with various aspects of the War on country life. We may quote two characteristic answers: "The rejoicing peasants cannot believe in their new life; the power of vodka was so great that you could not do anything with their life"; and, "Now vodka has quite disappeared from the life and consciousness of the people, they do not drink now either in joy or sorrow." A chapter on the Galician Front gives an account of the Russian army in Tarnopol, and incidentally of the simple and cordial relations existing between the officers and men in the Russian army, strongly contrasting with the relations between the Austrian officers and their men.

The chapter on Religion in Russia is particularly interesting. A layman holding high office in connexion with the Holy Synod was anxious to correct the wrong impression which largely prevails among Western nations as to the relationship of the Tsar to the orthodox Church. "The Emperor is the protector, but not the head, of the Russian Greek Church. The head of the Church is our Lord." Mr. Simpson, perhaps rather fancifully, remarks that in this particular point the views of the Oriental Orthodox Church and of the United Free Church of Scotland are practically one, and the opinion ordinarily held in this country of the relation of the Emperor to the Russian Church would be blasphemy to the true orthodox believer. We should have liked to hear from such a close observer as Mr. Simpson to what extent the Russian Church retains its influence upon the Intelligentsia, or educated classes, who, according to those who have lived amongst them, are desperately indifferent to all religion. It is gratifying, however, to find that the Russians expect a spiritual resurrection after the present world convulsion.

The book is written in a scholarly style, and we hope it will find many readers among those who wish to get at the heart of Russia. The Russians may be emotional and subject to strong feelings, but they do not themselves wish to be thought a mystical race of dreamers, as English novelists are fond of depicting them, and we shall find in this volume plenty of reason to see that they are prompt enough to act when necessary, and are capable of taking excessively prudent views of life. The book is beautifully illustrated and has a good index. It would be well in a future edition to write Russian words in Russian type.

Maurice Maeterlinck: Poet and Philosopher. By MACDONALD CLARK. (7s. 6d. net. Allen & Unwin.)

This careful and sympathetic study of the Great Belgian writer comes as a welcome contrast to the current topics of the books of to-day. There is a very justifiable prejudice amongst educated readers against the popular practice of issuing biographies and studies and estimates of living authors and their works, but this book might induce a reconsideration of the objection. It should appeal to those who are already students of Maeterlinck, and also become for many others a helpful introduction to his thought.

Mr. Macdonald's arrangement and method of discussing his author, though involving some repetition, is at once clear and stimulating. His treatment reveals a thoroughly discriminating and appreciative understanding, though there is perceptible a temperamental difference of mental vision which sometimes obscures the point he seeks to elucidate. Some readers may even become a little impatient with the frequent attempts to reconcile or harmonize apparently conflicting ideas. There is also a certain literalness about his interpretations, from which a more intuitive comprehension would have saved him. His labouring of the point as to the exact meanings of Maeterlinck's various uses of the term "conscience" is unnecessary after the admirable definition which he himself gives: "It stands for the whole *moral* of man as affected by his intellect" (page 123).

A very good idea is presented of Maeterlinck's development and of what may be called his progressive philosophy. Like other great minds, his has passed through various stages, and we have no reason to believe that it has reached its final one. The gloom of youthful sensitiveness, the impatience of ripening years, with their touch of intellectual arrogance, have passed, and show the philosopher emerging into a sunny optimism of conviction. On the way he has come into conflict with tradition and authority and accepted beliefs, and, naturally, sparks have been struck. But lovers and students of older philosophies must be perpetually reminded in Maeterlinck's writings, in spite of his restless modern independence, of his kinship with the classics, his supposed antagonists.

Mr. Macdonald Clark more than once refers to the charge sometimes brought against Maeterlinck of "intentionally surrounding his doctrines with a mysterious nebulosity"; and, perhaps unconsciously, does less than justice to his author's train of thought by a too strict definition of his expressions. For Maeterlinck is pre-eminently mystical, and though there is nothing shifty or vague in the underlying thought, it is partly conveyed by atmosphere and suggestion. The three central chapters on Maeterlinck's Philosophy are admirably arranged and full of vital matter. The influence of the old Stoic philosophy, the developing conceptions of wisdom, the mystery of the universe, and the imperious demand it makes on the mind of man for solution, the phenomena of the human soul, and the idea of immortality—in each of these discussions there is much illuminating intelligence as well as many provocative assumptions and inferences.

In Chapter VII—"Thought that has influenced Maeterlinck"—there are surely many notable omissions. In spite of his rejection of certain popular misconceptions of Christian teaching it has yet to be shown that Maeterlinck repudiates the true Christian philosophy or his indebtedness to its inspiration.

The development of Maeterlinck's dramatic characterization of women is effectively traced; his feminist sympathies explained and illustrated; his immense glorification of the "doctrine of silence" shown, and a sympathetic forecast suggested of the coming "static theatre," when soul-states rather than action will be depicted. Most readers will agree with Mr. Macdonald Clark in doubting whether "a public educated more highly, finely, and purely than now would frequent the theatre were the spectacular element to be so rigorously suppressed" as such a species of drama would involve.

There are a few eccentricities of punctuation in the book and one or two unintelligible remarks:—e.g. (page 94) about the beatification of Marie Magdaleine, and (page 211), referring to

Pius Antoninus. The full index would be more useful with further subdivisions.

Discovery. By R. A. GREGORY. (5s. net. Macmillan.)

Its sub-title, "The Spirit and Service of Science," gives some idea of the purpose of this book. Its author feels that, at a time like this when the whole nation is turning for help to science, it is necessary to look into the real nature of science, and examine the spirit in which scientific work should be carried on. The treatment is essentially popular, and, to a certain extent, unsystematic. The book is made up of twelve chapters which are to a great degree independent of each other. Each begins with half a dozen more or less striking quotations that have quite a fair connexion with the subject-matter that follows. There are, further, eight well executed reproductions of celebrated pictures and pieces of sculpture each illustrating indirectly some point in the text. A large number of quotations, poetical and otherwise, are included in the body of the book. They are all intrinsically good, but it is doubtful whether there are not too many of them, particularly at the beginning. Further, in the early chapters, the same authors are too frequently laid under contribution. As the work proceeds there is more variety.

Mr. Gregory writes frankly as an advocate. He looks forward to a time when men of science will occupy the places of honour at present held by politicians, warriors, and writers. In the meantime he sets forth with enthusiasm the merits of scientific men. His pleading cannot be said to be unfair, but it has two defects. To begin with, it overdoes the praise when speaking of the unselfishness of the scientific man. The reader is rather repelled by the pinnaled saint, and is inclined to question the sincerity of the successful scientist who characterizes his whole life work as *failure*. Then our author does not give sufficient attention to negative instances. He does not appear to see the destructive aspect of his argument when in praising Newton he speaks of "the spirit of rushing into print to claim priority to which some investigators attach so much importance." Similarly, on page 268 we have a quotation from Lord Kelvin that discredits some of the author's arguments about the love of knowledge for its own sake. Another defect, perhaps inevitable in a book of this size written in quasi independent chapters, is the repetition of certain statements. There is no great harm, after all, in these duplications, especially as it can in some cases be pleaded that the repeated facts are used in a somewhat different context.

But enough of fault-finding. The book, as a whole, is a good book and a timely one. It presents a view of science in its relation to education that is of the utmost importance at the present moment. It makes its appeal both to the student of science and to the layman. The matter is so presented that the man who knows little science can at least understand the general argument, and in following that argument he is led to learn, almost without knowing it, a great deal of the subject-matter of the various sciences. For Mr. Gregory takes all science to his province. He cannot be a specialist in all the branches, but he knows enough about all to write in the true scientific spirit about each. He is a remarkably well read student of science who can rise from a perusal of this book without learning a good many facts, and applications of facts, of which he was not before aware. Again, though the chapters are not linked on to each other according to any very apparent logical principle, the reader cannot fail to perceive that he is not reading at random. As he goes along he realizes that he is acquiring a loosely, but efficiently, organized body of knowledge. He begins to see the end toward which he is being led, so that when he comes to the two final chapters, entitled "Across the Border" and "Towards Infinity," he has no difficulty in co-ordinating what he has learned with what he vaguely wants to know. He is put in the best possible position to appreciate the aims and ideals of science. Though there is no chronological arrangement of the subject-matter, a glance backwards after reading the whole makes it quite manifest that each of the illustrative facts has been presented in just the order that conduces best to the general impression

that the author set out to create. This is equivalent to saying that Mr. Gregory has achieved a marked success.

Report of the Commissioner of Education for the Year ended June 30, 1915.

In the space at our disposal it is hopeless to do anything like justice to the contents of this volume of 780 large pages. After an account of the educational legislation of the year there is a chapter each on Education in the Larger Cities, in the Smaller Cities, on Rural Education, on Secondary, on Higher. The Training of Teachers has its chapter followed by one each on the following aspects of education—medical, vocational, commercial, agricultural, home, art, kindergarten, hygiene, of the deaf, of the blind. Then there are chapters on education in the various foreign countries including our own. In addition there are certain chapters on special subjects, such as Home Economics, Social Work, School Surveys, Museums, Libraries, the Work of the Churches, of the Young Men's Christian Association, of the various general Educational Bodies, Foundations, and Associations. Out of this enormous bill of fare we can select only one or two points of special interest to readers of this journal. Under Secondary Education we are told that: "A factor responsible for much of the recent progress in secondary education, especially in the smaller schools, is the State Inspector." English teachers have had more experience than the American, and may be apt to question the advantages of State inspection, but they will be somewhat reassured when they read the official "Advice and Instruction to High School Visitors." We hope that Whitehall will take note of this advice.

The principles of the Gary plan are winning their way, and New York adopts the scheme with some enthusiasm, though with proper official caution. What will probably be known in the future as the New York scheme is in the Report "the so-called Gary plan." America has its own list of troublesome dismissals, but there they appear to be in the Universities rather than in the schools. There seems, indeed, to be considerable uneasiness about the freedom of University teaching in the States. The Americans are peculiarly sensitive in the case of professors of economics, since their subject offers special temptations to the millionaire class to manipulate the teaching of the Universities in favour of the moneyed interests. The dismissal of Assistant Professor Nearing, of Pennsylvania University, is a case in point. Then there is a case of dismissal for denominational reasons, and at Utah a general state of discontent and unrest. It is ominous to find that the associated professors of America are beginning to classify the Universities into the two groups, the bond and the free. The newly developed American love of the inspector is not apparently to limit itself to the secondary school. The University is to have its share. In the Report embodying the result of the Survey of the University of Wisconsin occurs the sentence: "The tradition that it is not consistent with the dignity of instructors of University rank to be closely supervised does not justify, in the judgment of this Board, what is in some instances an almost entire absence of supervision in classroom work." Between surveys and supervisors the American University instructor is going to have his hands full.

In the midst of our discussions of educational reform a book of this kind is of special value, for there we see some of our own tendencies carried a step or two farther than at home. In this connexion the sections on vocational and professional education are particularly useful, and the general reviews of foreign education provide valuable guidance.

A Short History of Classical Scholarship. From the Sixth Century B.C. to the Present Day. By Sir JOHN EDWIN SANDYS, Litt.D., F.B.A. (7s. 6d. net. Cambridge University Press.)

In this handsome book the indefatigable Public Orator of Cambridge has presented the general reader with an excellent compendium of his three learned volumes on the history of

classical scholarship. It is not a mere mechanical reduction to scale. The abbreviation, which is considerable—434 pages here in place of 1,629—has been effected partly by curtailment of details and partly by omissions. As the preface tells us, scholars of comparatively subordinate importance have now been omitted altogether or very briefly dealt with, while those of primary importance are treated with almost the same fullness as before. The method is a sound one, and its application in the present instance such as to meet the requirements of all who stand in need of an introductory manual. But the result should, and if we mistake not will, lead more than one reader to the fuller work. The contents of Sir John Sandys's first volume, which deals with the earlier history of the subject, are handled, as we should expect with matter that interests chiefly the professional scholar, with greater succinctness than those of the two following volumes, in which we approach more modern times, the figures being 160 instead of 678, as against 274 instead of 951. The selection of the illustrations, 26 in number, in the smaller work has been well done, but we should have been glad to see the portrait of Nic. Heinsius added. Heinsius' pre-eminence as a critic is challenged only by Bentley. A notice of an abridgment is not the best place for criticisms of minutiae; but as the editor says in his preface that details have been added on minor points wherever it seemed desirable to bring the literature up to the present date, it may be noted that the statement on page 33, that the earliest mention of the disaster which befell the MSS. (in the library at Alexandria) is in Seneca, though literally true, is likely to mislead. The context of the passage (Dial. IX, 9, 5) shows that Seneca is drawing from a lost book of Livy, from which also Orosius (IV, 15, 31, quoted by Sir John Sandys) derived his similar statement. There would therefore seem to be contemporary evidence that the great library did suffer in the conflagration which ensued when Caesar set the Egyptian navy on fire.

THEOLOGY.

The Holy Spirit in Thought and Experience. By T. REES, M.A., Principal of the Independent College, Bangor, North Wales. (2s. 6d. net. Duckworth.)

This book is an important contribution to the series to which it belongs ("Studies in Theology"). In a series of ten chapters, Principal Rees traces the growth historically of the doctrine of the Holy Spirit from its earliest form, as "The Spirit of Yahweh" in the Old Testament, through "The Spirit of Wisdom," down to the New Testament "Spirit of Jesus Christ," and the full doctrine of "the Holy Spirit in the Trinity." We know of no treatise in English where the historical development of the doctrine is so well sketched. Mr. Rees is well equipped for such a task, being acquainted with the Semitic side and familiar with the whole range of the literature involved. The book fills a distinct gap in our theological literature.

"Murby's Smaller Scriptural Manuals, with Text."—*St. Luke.* With Introduction, Maps, and Explanatory Notes. By CHARLES KNAPP, D.D. (1s. 6d.)

The present edition of *St. Luke* is well up to the high standard set by Dr. Knapp himself in previous volumes of the same class. There is a full and extremely well arranged introduction, which contains items of information not always available in manuals of this kind. The characteristic notes (plan, teaching, &c.) of the Gospel are well brought out, and we are glad to see that the importance of the period between the Exile and the Gospel is emphasized in a lucid and helpful chronological table. The text (with footnotes) is broken up into sections with appropriate subject-matter headings, and there are some good maps. It is a pleasure to recommend such a manual as this. We believe it will stimulate the interest of those who use it in the subject-matter with which it deals. Its treatment is at once fresh and attractive.

CLASSICS.

Additional Latin Exercises to North and Hillard's Latin Prose Composition. By Rev. A. E. HILLARD and C. G. BOTTING. (2s. 6d. Rivingtons.)

It is enough to say that this forms a C series on exactly similar lines to the Exercises published as A and B. Local topics are freely handled—the last exercise, for instance, is a speech in defence of England's War policy, but there is nothing that should prove too hard for a well trained boy in the shell.

EDUCATION.

Pitman's Commercial Self-Educator. Part I.

This is the first of a series to be completed in twenty fortnightly parts. A number of timely features are included, such as lessons in Russian and Italian. There is also a course on the work of a private secretary, and the number contains the opening lessons of a complete study of business practice. The general editor is Mr. R. W. HOLLAND, who is assisted by some forty contributors. The illustrations, maps, and facsimile documents, together with the eminently practical nature of the instruction, will make this series extremely useful to the student of commercial subjects.

ENGLISH.

Patriotic Poetry, Greek and English. By W. RHYS ROBERTS, Litt.D. (3s. 6d. net. Murray.)

This is an enlargement of an address delivered on St. Crispin's Day 1915 to the Literary and Historical Society of Leeds University and to the boys of St. Peter's School, York. The supplementary notes, which occupy one-half of the volume, add to it a permanent interest, and the delay in publication is excused on the ground that the author has been undertaking the work of both the Leeds Classical Lecturers, absent on active service. Shakespeare's *Henry V* is selected as the grand model of English patriotic poetry, partly because of its connexion with St. Crispin's Day and partly because of the significant part assigned to Wales, and the Achilles of Homer is chosen as the nearest Greek analogy to Henry V. By way of contrast to the plot and conduct we have the *Persae* of Aeschylus. We have in the notes some fine examples of modern Greek poetry, but no attempt is made to cover the whole field or to discuss the wide questions of nationality or of the relation of modern to ancient Greece. The last word, however, enforced by Homer and Aristophanes no less than by Milton and Wordsworth, is that war is valuable only as a stage in human evolution and as pointing the way to humanity and peace.

MODERN LANGUAGES AND LITERATURE.

Compositions Françaises d'après les tableaux célèbres. For Middle Classes. By HILDA M. M. LAWRANCE. (2s. Arnold.)

We have placed this book at the head of the list because of its originality in conception. Subjects for free composition dealing with the weather, the farm-house, even holidays, have indeed become banal through repetition. And so Miss Lawrance has taken sixteen famous pictures, excellently reproduced, and chatted sympathetically and informally about them and their painters. She tells us that she encourages her classes to ask her all kinds of questions on points not fully understood in her preliminary lecture, and then gets them to open the book and read of what has been orally discussed. Afterwards short lists of leading words are learnt by heart and a free composition is written. The idea of the book is refreshingly new and most ably realized. Learners at school, particularly girls, will be enormously interested. We recommend this book most heartily.

- (1) *Grillparzer: Des Meeres und der Liebe Wellen.* Edited by JOHN L. KIND, Ph.D. (3s. 6d. net.)
- (2) *Peter Rosegger: Das Holznechtshaus.* Edited by MARIE GOEBEL. (2s. 6d.)
- (3) *A Scientific German Reader.* Edited by HERBERT Z. KIP, Ph.D. (5s. net. Oxford German Series by American Scholars.)
- (4) *Racine: Bérénice.* Edited by ROBERT EDOUARD PELLISSIER, Ph.D. (2s. net. Oxford French Series by American Scholars.)

(1) Is a monumental work, with a 100-page introduction, intended for University students. In the Appendix the events of each act are summarized in German. These synopses are accompanied by a number of literary questions, and by suggestions for dissertations. A serviceable and scholarly edition. (2) A book for schools rather than Universities, on the same lines as (1), but containing only 65 pages against 200, much shorter notes, and a vocabulary. A school edition of such a modern favourite as Rosegger is indeed a find for teachers. (3) A textbook of scientific German, well illustrated with photographs and drawings, furnished with a vocabulary and very full notes. The latter are written not from a grammatical, but entirely from a scientific, point of view. (4) A refined and literary edition of this, perhaps the most satisfying of all Racine's plays. But surely it is an understatement to say that the function of the confidants and confidantes "is to introduce situations, and to aid in the dialogue of the main characters." We were always of opinion that Racine had subtly designed these four personages as incarnations of a side of their protagonists' characters which could be much more effectively brought out by their help than in any other way. Paulin stands for the Duty of Titus, Phénice for the Fears of Bérénice.

- (1) *Erckmann-Chatrian: Waterloo.* Adapted and edited by

EUGÈNE PELLISSIER. (2s. 6d. Siepmann's Advanced French Series.) (2) *Key to Appendixes of the Above.* (2s. 6d.) (3) *Fables of La Fontaine.* Selected and edited by A. G. MACPHERSON, M.A. (3s. Cambridge University Press.) (4) *Molière: Les Fourberies de Scapin.* Edited, with Vocabulary, by KENNETH MCKENZIE. (1s. 3d. Harrap.)

The last word has already been said about the series of which (1) and (2) form part. It seems impossible to devise a method better adapted for bringing the cream to the surface, and thereafter causing it to be profitably assimilated. The book itself is worth reading just at this time. "La guerre! Ceux qui veulent la guerre, ceux qui rendent les hommes semblables à des animaux féroces, doivent avoir un compte terrible à régler là-haut!" The words might have been written yesterday. The selections contained in (3) are chosen partly for literary excellence and partly for variety of subject. The editor is to be congratulated on his sustained endeavour to lay stress, yet not too heavily, on the qualities which make La Fontaine a master of literature. (4) is marvellously cheap. The introduction and notes are a model of unpedantic scholarship. Uncommonly interesting, too, are the Appendixes.

"Nelson's Edition Lutetia." — *Les Classiques Français.* Among recent additions to "Nelson's Edition Lutetia" we would call attention to Fénelon, *De l'Education des Filles et Dialogues des Morts*, No. 35. The former of these works deserves more attention in our training colleges than it receives to-day. As the editor of the series, M. Emile Faguet, well remarks, the Catholic priest of the seventeenth century is far more democratic and liberal in his ideal of women's education than Rousseau, the revolutionary philosopher of the eighteenth century. Another welcome volume, No. 31, is *André Chénier, Poésies*. Half Greek by birth he wrote a pure French poem that Theocritus and the Anthologists would not have disowned, and, as M. Faguet points out, he left no successors. In his own country all praise but few read him. A third volume, No. 33, is *Jean S. Bogar et Autres Nouvelles* of CHARLES NODIER. One of his minor *fantaisies* (Nodier is credited with the invention of the word) is "Trilby," a Scotch fairy tale. We wonder in which of Scott's novels the author can have found the name, in a preface or a note, he does not remember which. Certainly it was from Nodier, not Scott, that Du Maurier borrowed the name.

"Collection Nelson." — Of the volumes in this series which will appeal to French teachers and pupils we may mention *La Convention*, from Michelet's *Révolution Française*, which embraces the trial and execution of Louis XVI; *Un Trio de Romans*, by THÉOPHILE GAUTIER (Militona, Jean et Jeannette, Avatar). *La Comtesse Pauline de Beaumont*, by AGÉNOR BARDOUX. *De Vigny Théâtre*, 2 vols. (contains the famous *Chatterton* and his translations of *The Merchant of Venice* and *Othello*); *L'Ombre s'étend sur la Montagne*, by EDOUARD ROD.

Bellows' Dictionary for the Pocket: French-English and English-French. Third Edition, revised by WILLIAM BELLOWES. (8s. 6d. Kegan Paul; Longmans; Paris: Hachette.)

It is now forty-four years since the first edition of this famous Dictionary appeared. The sale has reached 100,000, and the son lives to supplement and complete the work of his father, John Bellows, the Quaker printer of Gloucester. The success of the work was due to a combination of typography and scholarship, a rare combination in this age. It would indeed be superfluous to rehearse the various ingenious devices by which the original lexicographer contrived to husband space without loss of clarity. A summary of them is given to face the title-page, but we doubt whether the claim to copyright could be sustained for all. In the first edition Mr. Bellows had for collaborator M. Beljame, the distinguished abbreviator of Littré. In the work of revision the son has consulted Prof. Bonnet-Maury and other French authorities. We have tested the new edition for terms that the War has brought into prominence—*boche*, *poilu*, "sea-plane," "curtain-fire," and not found it lacking. Where every page is precious, we suggest that in the next edition the thirty pages of grammar might well be omitted, and the space thus saved be devoted to an enlargement of idiomatic phrases and colloquial slang—"a white elephant," "a howler," "to turn turtle," "to grouse." Uniform with this pocket edition, but set in clear nonpareil type, Mr. William Bellows has published the French and English edition: 5s., Longmans.

English Phonetics.

Messrs. W. Heffer & Sons, Cambridge, announce the forthcoming issue of a *First Course of English Phonetics*, by H. E. PALMER. The book is intended primarily for foreign students of English, but will be helpful also to English students of phonetics.

MATHEMATICS.

Commercial Arithmetic and Accounts. By A. R. PALMER, B.Sc., B.A., and J. STEPHENSON, M.A. (In two parts, 2s. 6d. net each. Bell.)

As the future tendency in modern schools will probably be to make the practical training still more practical, the appearance of this book is well timed. The authors' aim is to provide a textbook that will give a thorough commercial training in arithmetic to pupils who are being prepared for a business career. Though in a few cases we should prefer to see examples worked differently, the methods used are sound, and avoid the approximate character of those which are sometimes employed. Teachers in secondary schools will find many of the examples useful, as well as some of the bookwork sections: for instance, that on profit and loss (pages 402-3), in which the practice in some trades of reckoning profit on the selling price is explained and defended.

Preliminary Geometry. By F. ROSENBERG, M.A., B.Sc. (2s. Clive.)

This book contains the principal propositions of the first and third books of Euclid, with a few pages on geometrical solids. The author's object is, by blending practical and theoretical work at the outset, to avoid the unattractiveness of the purely theoretical textbook and the tendency to loose reasoning of the practical manual. In this he seems to have succeeded. A few points might, perhaps, be noticed for revision. Page 4 contains two independent definitions of a straight line. The proof of Euclid I, 6 (page 44), is unnecessarily long. The use of the term, "any convenient radius," is open to objection. The following sentences (page 2), which are intended to illustrate the definition of a surface, are awkwardly expressed: "If water is poured into a bucket, and some oil is poured on the top of the water, these do not mix. It is neither water nor oil, and has no thickness."

Practical Mathematics for Technical Students. Part II. By T. S. USHERWOOD, B.Sc., and C. J. A. TRIMBLE, B.A. (Macmillan.)

Part I deals with elementary Mathematics, Part II with the higher branches (to the calculus and differential equations) which students of engineering and applied science are likely to need. The chief points of the book are the omission of the more difficult proofs, the practical character of all the examples, and the numerous and admirable illustrations. The proofs given are not always rigid, and it would be of service to readers who wish to pursue the subject if the departures from rigidity were pointed out, and also if references were given to books in which the omitted proofs can be read. The exponential series (page 311) is a good illustration of the method of expanding a function in a power series, but it should be noticed that the series has already been assumed in obtaining the differential coefficient of the exponential function (page 209). A great deal of useful material is placed before the readers of this book without cramping and without ever failing in interest.

- (1) *The Algebraic Theory of Modular Systems.* By F. S. MACAULAY, M.A., D.Sc. Cambridge Tracts in Mathematics and Mathematical Physics, No. 19. (4s. 6d. net. Cambridge University Press.) (2) *An Introduction to the use of Generalized Coordinates in Mechanics and Physics.* By W. E. BYERLY. (5s. 6d. Ginn.)

Though differing widely, these books agree in possessing a range beyond that of the ordinary school course. Both contain valuable accounts of their subjects. Dr. Macaulay's tract is intended for advanced students and summarizes the work on modular systems, a subject to the knowledge of which he has himself contributed. Prof. Byerly's work makes less demand on the mathematical attainments of its readers. The summaries which conclude each chapter are a feature worthy of imitation.

GEOGRAPHY.

The Romance of Travel. (6d. each. Henry Frowde and Hodder & Stoughton.)

These differ from the above series in that each book is the narration of one traveller. They can therefore suitably be used for continuous reading, that one of the series being chosen which fits in with the geography course. Each book has one coloured picture and many photographs. Such books as these give material with which the geographical imagination can work, and without which geography is an arid study.

Bacon's Large-scale Map of the British Battle Front. (30 × 20 in. 6d.)

A useful piece of work on a scale of four miles to the inch. The Allies' line on July 1 is shown, and the ground gained in "the great push" is plainly marked. Rivers, woodlands, and international boundaries are appropriately coloured, and all canals and railways can be traced. The map is indispensable and remarkably cheap.

War Map of Europe. (6d. net. Bacon.)

A useful map, embracing all the countries involved. It is clearly engraved, distinctly coloured, and on a scale of sixty miles to the inch.

MUSIC.

Among the several firms who are devoting their energies to the publication of educational music, Messrs. Joseph Williams, of Great Portland Street, W., take a leading place, and some of their recent publications should be noted by teachers who are now making their lists for the new term. Easy and effective pianoforte music for children is always difficult to find, and the demand is great and constant.

Three Short Pieces. By THOMAS F. DUNHILL. (1s. 6d. net.)

This little album contains three of the best numbers we have recently seen from the pen of Mr. Dunhill. The "sailor dance" is a capital tune, and its rhythm is irresistible.

Six Pieces for Children. By FELIX SWINSTEAD. (6d. each.)

Mr. Swinstead takes high rank as a writer of children's music. The "Prelude" is a capital study for alternating the hands. "A Frosty Morn" affords good practice in repeated notes. "Evening Song" is a tender little melody for the right hand with an easy accompaniment. "Elevation," "A Lament," and "Two-part Invention," each combine melodiousness with adequate development of technique. Capital teaching material, these.

Holiday Time. By GEORGE TOOTELL. (1s. 6d. net.)

An album of nine little pieces for the young is effectively laid out for the instrument. We like No. 6, although it is rather more difficult than the others.

Mayflowers. By STEPAN ESIPOFF. (2s. net.)

Is a volume of six small pieces without octaves, somewhat after the style of Gurliitt. No. 3, entitled "Banjo," is a clever little skit on that instrument, and, incidentally, is an excellent study in staccato.

Rosalind and Miranda: Two Shakespeare Pieces, by HUBERT BATH, will appeal to more advanced players. "Miranda" is quite charming with its tripping staccato rhythm.

Pianoforte Albums by Modern Composers.

The two numbers we have seen contain pieces of moderate difficulty by Benjamin Godard, D'Ambrosio, Florian Pascal, Esipoff &c.

Progressive Studies.

These books contain a splendid variety of studies in all grades, selected from the works of Duvernoz, Heller, Czerny, Bertini, and other masters who have excelled in this direction.

Half-Minute Violoncello Studies. (By W. E. WHITEHOUSE. 1s. 6d. net.)

An admirable book of short daily studies by the well known Professor at the R.A.M. and R.C.M. These are to be played a certain number of times in a given number of seconds, checked by a watch placed on the music stand.

Singers who have a mind above a ballad, and can appreciate a well-written song, should make acquaintance with Mr. STEWART MACPHERSON's settings of *Six Scotch Songs* by ROBERT BURNS. Other composers have set these words, but none more successfully than Mr. Macpherson. High praise, but well deserved.

Six Lyrics by Richard Middleton, set to music by FLORIAN PASCAL, afford plenty of scope both to singer and accompanist. No. 6, *Chant Pagan*, is a splendidly virile composition, and requires a good singer to do it justice. The ending is decidedly pagan!

TECHNOLOGICAL.

Architectural Building Construction. By W. R. JAGGARD, F.R.I.B.A., and F. E. DRURY, F.I.S.E., M.C.I. Vol. I. (6s. net. Cambridge University Press.)

Most books on building construction present each section of the work—such as brickwork, stonework, carpentry, joinery, roof coverings, plumbing, &c.—in separate chapters, giving typical examples of the various details of construction, with no attempt to show their adaptation to any particular building. Recognizing that such a method of treatment has its objections, the authors have conceived the idea of presenting to the student complete plans, elevations, and sections of two buildings—one a typical detached cottage of two stories, and the other a single-storied workshop having some architectural character—and have utilized the seventeen chapters in a consideration of the constructional details needed in one or other of these buildings. A close perusal of the book convincingly shows that such an arrangement is advantageous to the student, as it allows him to associate the variety of detail with its specific application. The general arrangement of the book reflects great credit upon the authors, a good feature being that the text, which is both lucid and fully descriptive, is closely linked up

with the illustrations. In the illustrations, which are excellently produced, much use has been made of pictorial representation, and this will be of great assistance to the young student. There is evidence on almost every page of the book that the authors not only know the subject thoroughly, but that, with a conscious desire to raise the standard of the study of building construction, they have produced a book which will commend itself to teachers, and prove of great value.

Drawing and Design for Craftsmen. By R. S. BOWERS.
(6s. net. Cassell.)

The author's endeavour is, as stated in the preface, to supply suggestions and advice to all engaged or interested in the various crafts and industries in view of the possible great industrial progress in the near future. In the forty-six chapters into which the book is divided a very wide field has been covered, as practically every kind of drawing and designing is dealt with. Starting with preliminary notes which give advice to the beginner as to selection of instruments and materials, followed by chapters on all the different methods of drawing and projection, such as freehand, model, light and shade, and brush drawing, and geometrical, mechanical, perspective and other methods of projection with their applications, the author deals with practical designing and its applications to all kinds of craftsmanship. The book is profusely illustrated, the number of illustrations being 764. They are uniformly excellent, both in character and arrangement; the variety is of necessity very great, and they are highly suggestive to both the beginner and the skilled craftsman. The book is one that can be confidently recommended to all interested in drawing and design.

CORRESPONDENCE.

THE MATTHAY METHOD.

To the Editor of "The Journal of Education."

DEAR SIR,—I notice in the Journal a letter on this subject. The writer holds that head mistresses are making themselves ridiculous by insisting that teachers should use the Matthay method; and I quite agree with her that anyone who insists on a one-and-only method of doing anything is in danger of making himself or herself ridiculous. I believe Mr. Matthay himself would say that it would not matter very much if you stood on your head and played with your toes so long as you extracted from the instrument the endless gradations of tone of which it is capable, and made intelligible the composer's meaning. And the Royal Academy of Music, on whose staff Mr. Matthay is one of the most valued professors, expressly states that in its examinations any method of technique will be accepted provided the results are good. But the position of a head mistress is very difficult. She may be—often is—unmusical; or, if naturally musical, may have had no technical training. Her suitability for her very important office rests upon something beyond and above technical knowledge in any one department; yet, if she is conscientious, she feels that every department must be efficiently staffed. Can we blame her, then, if she seeks the advice of musical friends, professional or amateur, in whose judgment she has confidence? And, if so many head mistresses are proclaiming their preference for the Matthay method, it looks as if the number of musical people who believe in it must be considerable. It is possible that your correspondent is herself influenced by some "well trained musician" who has assured her that the Matthay method is "merely artificial and cramping"; and if I say that, in my humble judgment, it is just the opposite—natural, and making for perfect ease in performance—it is only pitting the opinion of one musician against another, and does not get us any further.

It may help if one asks, "What would I do if I were an unmusical head mistress?" Well, in the first place, I should never *insist* on a teacher using any particular method. If she is worth her salt, a teacher will, for her own sake and her

pupils', seek out the best methods; but if she cannot teach *con amore* she will never get results. Secondly, I should not *advertise* my preference for any method. It is a direct temptation to applicants to profess knowledge they do not possess for the sake of getting a post. If I had a preference I should keep it to myself until the candidate had laid bare her own soul on the subject of music teaching generally. Thirdly, if I desired a Matthay teacher—and if I were a head mistress I certainly should—I would not engage any candidate without some assurance, either from Mr. Matthay or from whichever of his known pupils has instructed her, that she really understands his principles and has skill in applying them. For that is what the Matthay method means: certain quite simple principles and skill in applying them. In no other sense is it a "method," for in the teaching of technique and interpretation it would be almost impossible to map out, from start to finish, a series of lessons, each "arising out of the last and leading up to the next." There is no "Matthay Method"; but the term is handy, and, so long as we understand how much is meant by it, no harm is done. This, however, is a digression. The point I would chiefly emphasize is that, while a head mistress is surely entitled to a preference, a too early or too candid expression of it may place her in a difficulty for which her lack of expert knowledge finds her unprepared. This is a very real danger.

In all that I have said, or nearly all, I think "M. S." would agree. If on one point we differ—and, after all, she does not advance the opinion as her own—may I say that my judgment has been formed upon pretty close observation during many years?—Faithfully yours,
A. J. C.

THE DIRECT METHOD OF TRANSLATION.

To the Editor of the Journal of Education.

SIR,—In the September number of the *Journal* there is (page 503) a note on an article of mine that appeared under the above title in the July number of *Modern Language Teaching*. In it the writer, after commenting, I am glad to see, upon the moderation of my views, proceeds to defend the Old Method thus:—

"But surely the learner may reach the goal of reading by direct association by passing through the stage of translation, and as a matter of fact it is by means of translation that most of us learnt to read foreign books without translation. Translation was a ladder which we threw away when it was no longer needed. If the matter is looked at from this point of view, the object of the old teacher and the new is seen to be the same."

That the object of the Old Method school is in any sense the creation of the direct association is a startling statement. I wonder how many advocates of the old method will endorse it. Those who do will, I venture to say, find themselves placed in a hopelessly illogical position—so illogical that they will have no alternative but to abandon the old method. For it is not true that they use translation as a ladder, which is thrown away when no longer needed. They use it long after it is needed, and to an extent that tends to defeat a purpose they are here credited with having, namely, the creation of the direct association. Let me try to make this clear.

Translation as a method of instruction may be used (1) to make clear the meaning of new words; (2) to practise the use of the words when known. For example: (1. Interpretation.) Teacher: "What is the French for 'to write,' and 'a book'?" Pupil: "*Ecrire* and *un livre*." (2. Practice.) Teacher: "What is the French for 'I have written a book. Did he write the book?'" &c. Pupil: "*J'ai écrit un livre*." &c.

It is generally admitted that the use of translation as a means of interpretation does not necessarily hinder the direct association. In the article in *Modern Language Teaching* referred to, he went so far as to write:—

"Even if translation were used as the sole method of interpretation, it would still be quite possible to create the direct association, provided that the translation was not persisted in when once it had served its purpose as a means of interpretation, that it was not allowed to become a habit—in other words, provided it was excluded from practice."

The old-method teacher does not observe this condition. Not only does he make translation the chief or sole method of interpretation—a quite indefensible proceeding for reasons which have

nothing to do with the direct association—but he also makes it the chief or sole method of practice. The effect of his method as a whole is, therefore, to foster the habit of translation which is the exact opposite of the habit of direct association; the two habits are mutually exclusive.

Of course, if the pupil, when he escapes finally from the old-method teacher, has sense enough to try to read without translation, the translation habit will drop away if not already too firmly fixed. Sometimes there can be no doubt that it never does drop away; the old method teacher has done his mischievous work too well.

Now if, as the writer of the note in the *Journal* asserts, the object of the old-method teacher is to establish the habit of direct association, then the obvious comment is that he is going a singularly roundabout way to achieve his object. It is like going from London to Paris *via* the North Pole. That the journey's end may, nevertheless, be reached is no excuse for thus starting off in the wrong direction, unless it is to be granted that any way of getting to an end is equally good, however much time and energy be wasted in the process. This I am not prepared to assume.

If it be argued that the direct association ought to be established, I submit that the old method is indefensible. If, on the other hand, the object of the old method is to establish the habit of translation, I suggest that its advocates should at least give one decent reason for professing that object. Have they one?

Let me now turn to another point made by the writer of the note in the *Journal*. He says:

"The use of the two methods simultaneously, the one for easy reading, the other for difficult work, Mr. Kirkman does not discuss, but it is a very important point. A class might be able to apprehend the meaning of a simple French story by merely reading it in French, but might be quite at sea were a French classic in front of it."

I do not admit that a French classic ought to be put into the hands of any class which is so much "at sea" with it that its sense cannot be grasped without constant translation. A certain amount of translation there must, of course, be with any advanced text, but, according to Direct Method principles, it should be reduced to the minimum consistent with clear apprehension of the meaning.

Finally, I read in the note under discussion that—

"Mr. Kirkman sighs for the time when science will be able to tell us exactly how much a pupil translates mentally. Pending that happy event, could he not in his investigations begin with the teachers?"

There is here a subtle suggestion of sarcasm at my expense. The sarcasm would be quite effective if I had happened to say what I am represented as saying. But I said nothing of the sort. I said simply that the amount a pupil translates mentally is a matter of conjecture, and will remain so until the matter has been tested scientifically. I said this as a matter of protest against the sweeping statements that have been made on the subject.

The concluding question in the quotation I cannot answer satisfactorily, for I can only make a guess at what it means. If it has reference to the unfavourable conditions under which the modern language teacher works, I think I am entitled to answer that no one has drawn attention to these conditions more often than I have.

I have done so because the success of the Direct Method depends upon these conditions to a far greater extent than does the old method. The old method can be used by a teacher who has a very slender knowledge of the language he teaches—a fact which accounts for the popularity of the method in not a few classrooms. This is not true of the Direct Method. The teacher who uses it must have an adequate knowledge of his subject; and, what is just as important, he must understand the method itself; or, what amounts to the same, the right principles of language teaching. The supposed failure of the Direct Method is, indeed, almost entirely due to the fact that many who profess to use it do not understand these principles. Some of their critics are only too happy to ascribe their failure to the method and not to the teacher. It is like telling a man who misses the target that it is the fault of the gun. There is no proof whatever that the Direct Method has failed.

There is abundant evidence that it succeeds when the above-named conditions of success are present. What has to be done is to make these conditions universal. That means insistence upon a professional training that does not at present exist. And here we come to the familiar stumbling-block. There is not much use insisting upon an adequate (and therefore expensive) professional training as long as the average wage of the modern language teacher is what it is—disgracefully inadequate.

F. B. KIRKMAN.

UNIVERSITIES AND SCHOOLS.

WALES.

A special meeting of the Court was held on September 16 at Shrewsbury, to discuss the evidence which should be submitted on behalf of the University before the Royal Commission. The Executive Committee had drawn up a series of resolutions, or rather a number of headings, around which the debate chiefly revolved. On the whole there seems to be a surprising amount of unanimity in the Court as to its policy, though some of its decisions were rather unexpected. It is generally believed that the Commission proposes to give the Executive Committee greater powers than it possesses at present in the control of the University, and that it intends to reduce the Court to a great extent to a mere machine for registering its decisions. The new Executive Committee, if these surmises prove to be correct, will be highly academic in its constitution, and will to all intents and purposes be the controlling force in the University. In the three University Colleges, the powers of the Courts or Governors at present are very limited, and only to a slight extent do they determine the policy of the colleges. Indeed, the greater part of their business consists of passing votes of condolence and listening to long reports from the Principals, and it is therefore not to be wondered at that the ordinary member takes but little interest in their proceedings. As the majority of the members of the University Court have had experience of three Courts of Governors, it was therefore very surprising that they were prepared to reduce the University Court to a similar state of impotence. According to the resolution which was adopted, all academic business will be withdrawn from the control of the Court, and therefore its present position as the dominating influence in the University will be seriously undermined.

A strong resolution was passed that the University should be free from all external interference, so as to enable it to develop on its own lines. The authorities strongly suspect that it is the intention of the Board of Education to exercise greater control over the University, and therefore, to safeguard its interests, the above resolution was unanimously passed. Interference on the part of the Welsh Department is not popular in Wales just now.

A further proposition that financial help be requested from the County Councils was, after some debate, also acceded to, but the County Councillors agreed to support it only on condition that greater proportionate representation was granted to them in the Charter. Hitherto the University has not received any direct support from the rates, and therefore it was quite prepared to bribe the Councils by giving them greater representation, provided they supplied a portion of the funds. However, the Court took care that the influence of the County Council element in the University would not be really increased by admitting more of their members, by resolving to transfer some of the more important powers of the Court to the Executive Committee, where the voting power of the lay element will probably be very significant. Principal Sir Harry Reichel showed his distrust of County Council control very distinctly when he stated that it was only on condition that the Executive Committee should become the chief power in the University that he was prepared to admit a greater proportion of County Council members on the Court, and he probably reflects the attitude of the majority of his colleagues on the Senate.

The results of the Annual Examination were published at least a fortnight earlier than usual this year, which was a great convenience to the schools. The Office deserves a great deal of credit for the expeditious manner in which they got over the difficulties inseparable from a shortness of staff.

At the last meeting of the County Council there was another attempt at reaching a solution of the deadlock which has arisen over the residence question. Both sides had, so far, shown not the slightest inclination to compromise or to depart from their original positions; in the meantime, the two schools are closed and some hundreds of children are untaught. But at the last meeting a better spirit seemed to prevail, as the County Council has agreed to meet a deputation from the National Union of Teachers to discuss the whole situation. Let us hope, in the interests of the children, that some satisfactory way out of the difficulty will be found at this round-table conference.

SCOTLAND.

As a result of a discussion in the House of Commons towards

**Preliminary
Examinations
Ordinance.**

the end of the Session, the Ordinance on Preliminary Examinations has been delayed for a time, at the suggestion of the Secretary for Scotland. No definite reason was given for the delay, except that some of the provisions of the Ordinance had caused alarm to the Scotch Education Department. The alarming provisions have not yet been indicated, and it is therefore impossible to discuss them. But any serious interference on the part of the Education Department, which has no authority over the Universities, will be deeply resented. Any suggestions made by the Department will be considered, and it is not expected that there will be long delay in the passing of the Ordinance.

Proposals regarding the teaching of Russian language and literature in the University are under consideration, and it is hoped that a lectureship may soon be instituted. There is a large diminution

Glasgow.

in the number of men candidates for the Preliminary Examinations, but the number of women is practically unchanged. The casualties among students and graduates of the University serving with the Forces have been heavy during the summer. In the months of July and August, forty-seven were killed, eighty-four wounded, and nine missing.

The University has lost a distinguished scholar and able teacher through the death of the Very Rev. Thomas Nicol, D.D., Professor of Divinity and Biblical Criticism since 1899. Professor Nicol took his

Aberdeen.

Arts degree at Aberdeen, with first-class honours both in Classics and in Philosophy, and in 1914-15 he was Moderator of the General Assembly of the Church of Scotland.—By the death of Mrs. William Jackson, of Aberdeen, a large sum of money, bequeathed by her husband, becomes available for the establishment of a Chair of Engineering in the University.—The late Sir James Sivewright has bequeathed £5,000 to Milne's Institution, Fochabers, and £10,000 to the Senatus of Aberdeen University to provide bursaries for students from the County of Moray entering these institutions. For the University bursaries, a preference is to be given to students from Milne's Institution, and especially to those who are sons of stonemasons.

It has been decided that, owing to the War, there will be in 1916-17 only two terms, instead of three, in the ordinary courses in Arts and Science. The first

Edinburgh.

and second terms will each be extended by one week. In most of the honours courses there will be no change in the present arrangements. The women medical graduates and students and their friends have offered £4,000 to the University Court in order to facilitate the introduction of women students to the classes of the Medical Faculty, on condition that women are admitted to professional teaching, that the privileges enjoyed at present by men students are given also to women students, and that the instruction is provided at an early date. The Court has accepted the offer.

At the annual general meeting of the Institute in Edinburgh on September 16, a resolution was adopted protesting against the absence of representatives of Scottish teachers on the Committees appointed by the Government to consider the place of

**Educational
Institute of
Scotland.**

science and modern languages in our educational system, and resolving to take immediate action to impress upon the Government the necessity of appointing a special Committee to inquire into the whole system of education in Scotland, with due representation of teachers. Dr. Morgan, who moved the resolution, pointed out that on the Government Committees there were representatives of English public schools and Universities, but only one representative of a National school, and not a single Scottish teacher of any grade—primary, secondary, or University. A resolution was also adopted in favour of entrusting the local administration of education to County Councils, and, in the case of the four "county" cities, to their Town Councils. The meeting approved the draft proposals on union with the Secondary Education Association and the Class Teachers' Federation. It is expected that the Union will be completed in September 1917. It was reported that the contributions to the Scottish Teachers' Fund for War relief amounted to over £35,000. Large sums have been given to the Prince of Wales's Fund, to Belgian relief, to the Y.M.C.A., and to the Scottish Women's Hospitals. To the special fund for teachers and their dependents a sum of £12,750 has been allotted. Mr. Neil S. Snodgrass (Govan) was elected President of the Institute, in succession to Mr. Robert Dickson.

IRELAND.

An interesting ceremony took place in Trinity College on the afternoon of August 5, when a pair of silver cups were presented

from the citizens of Dublin to the Commandant of the Officers' Training Corps, and by him handed to the Provost, as a perpetual trust, in commemoration of the defence of Trinity College during Easter week. It is proposed out of the remainder of the Citizens' Commemoration Fund to endow a bed in Sir Patrick Dunn's Hospital, for the benefit of the University Officers' Training Corps.

A special meeting of the University Senate was held on September 15, for the purpose of conferring medical degrees and licences on students desiring to join the Forces.

University College, Dublin, has lost a valued member of its staff through the death of Lieutenant T. M. Kettle, of the Royal Dublin Fusiliers, who was killed in action on September 9. Lieutenant Kettle, who was only thirty-six years of age, was a man of scholarly and versatile attainments, skilled both as a writer and a speaker. An old pupil of Clongowes Wood College and a graduate of University College, Dublin, he joined the Irish Bar, and afterwards represented East Tyrone in Parliament from 1906 until 1910, when he was appointed Professor of Irish Economics in the National University. Shortly after the outbreak of the War he joined the Forces, and took an active part in recruiting before himself going to the Front.

Since the beginning of September the secondary schools have been in full work. The Intermediate pass lists were published in August, followed by the honours lists early in September. The number of boys examined this year was 6,644, as against 6,392 last year; of these, 3,839 (or 57.8 per cent.) passed, as against 3,904 last year. Among girls, the total number examined was 4,532, of whom 2,604 (or 57.5 per cent.) passed, the corresponding numbers last year being 4,088 and 2,622. The proportion of students who passed with honours is somewhat smaller this year than last, both among boys and girls. The Board has this year made a new departure, by publishing in the honours lists the examination numbers only of the successful candidates, without giving their names and schools; consequently the newspapers have had to relinquish their usual practice of tabulating successes and arranging the schools in order of merit, and, incidentally, of complimenting individual students on their performances. The schools have to some extent made up for this abstinence by publishing their own results in full, with the names of prize winners, in the advertising columns. The reason for this change on the part of the Board, it is understood, is the desire to prevent the kidnapping by some schools of clever pupils from others.

The Irish National School teachers have at last been successful in their long struggle to secure the monthly, instead of quarterly, payment of their salaries. It is hoped that the change will be carried through before the close of the current financial year.

The Commissioners of National Education recently issued a memorandum to school managers, forbidding the wearing of political badges by teachers or pupils in National schools at any time.

At the opening meeting of the session of Rathmines Municipal Technical Institute on September 14, the Principal, Mr. Arthur Williamson, M.A., in an address on "Preparing for the Economic War," said that the two most urgent needs of Irish elementary education at present were a much higher degree of compulsion in attendance and the issue universally of a higher leaving certificate, such as had already been adopted in Belfast, which would assist employers in their selection of juniors and would facilitate the work of the technical schools. The Rathmines Institute is including classes for gardening in its program for this session.

One of the most active workers for the higher education of women was Miss Mary MacKillip, one of the Principals of Victoria High School, Londonderry, who died on August 13. One of the early graduates of the Royal University, she worked with unflagging zeal in the cause of education, and, besides her work in Victoria High School, was one of the Principals of the Northlands School of Housewifery in Londonderry, under the Department of Agriculture.

The annual Oireachtas was held in Dublin during August 7-12, and, despite some inevitable drawbacks owing to the absence of prominent language workers, there was no lack of animation and interest in the proceedings. Dr. Douglas Hyde, the late President of the Gaelic League, having refused to resume office, the choice of his successor for the coming year fell on Prof. Eoin MacNeill, hitherto Vice-President—though this appointment, under present circumstances, must be considered purely honorary. The summer colleges have all been in work during the holiday months July and August, and maintained their level of attendance. The Leinster College of Irish opens its eleventh session on September 23. The report of the session 1915-16 is a gratifying one, and the work of the College received high praise from the Department Inspector.

THE RUSSIAN LANGUAGE.

RUSSIAN-ENGLISH DICTIONARY. By J. H. FREES, M.A. (Cantab.). 520 closely-packed pages, in very clear type. Crown 8vo, cloth, 5s. net.

"It is very pleasant to be able to extend a cordial welcome to [it]. Mr. Freese's book is excellent and clear: each Russian word is accented and also transliterated to show pronunciation. The Dictionary is very full... all parts of verbs at all different from the infinitive and all parts of nouns different from the nominative singular are given, an innovation for which novices will be extremely grateful."—*Times*.

The English-Russian volume will be ready in a few weeks.

VOLPER'S RUSSIAN ACCIDENCE IN TABLES. Giving all Russian Declensions of Nouns, Adjectives, Numerals, Pronouns; Conjugations of Verbs; Formation of Nouns, Adjectives, Numerals; Aspects of Verbs, &c. Adapted for English Students, and provided with a full Index and Grammatical Glossary, by MARK SIEFF. Imperial 8vo (9½ by 7 in.).

RUSSIAN COMMERCIAL CORRESPONDENCE. By MARK SIEFF, L.C.C., Instructor in Russian. Crown 8vo, cloth, 3s. 6d. net. [Next Week.]

PRIZE COMPETITIONS.

The winner of the Translation Prize for July is Dr. R. L. Batterbury, Berkhamsted.

The Translation Prize for September is awarded to "Escholier."

Les mots ne coïncident pas d'une langue à l'autre, exactement, et ne peuvent que rarement se juxtaposer. Il n'existe entre eux aucun lien de dépendance réciproque: pour un rapprochement accidentel, dix écarts surgiront aussitôt. La langue d'une nation est parfaitement adéquate à son tempérament intellectuel et moral, mais, et à cause de cela même, elle lui est exclusivement personnelle. Chaque mot traîne après lui un cortège d'associations et de souvenirs anciens, d'impressions inconscientes et héréditaires que l'on ne saurait traduire. Pour ne prendre qu'un exemple, nous apprécions bien, en France, l'attrait du coin du feu, le charme de la chambre claire et coquette où, parmi le savant désordre des meubles pittoresques, les heures s'écoulent légères en conversations aimables, où l'on admet et choie les enfants, où se marient harmonieusement le bien être, le bon goût et le luxe; mais nous ignorons le confort solide des intérieurs anglais, la cordialité tonique et virile, presque toujours moralisante même, qui y règne, le charme du repos, en ces fauteuils profonds où s'abandonner est "comme un triomphe remporté sur la vie hostile," la quiétude des longues soirées d'hiver à laquelle prédisposent le climat humide et froid, et, souvent, la vie trépidante de la cité, de sorte que *la douceur du foyer* est, pour un Français, tout autre chose que le "*home, sweet home*" d'un Anglais. Les traduire, l'un par l'autre, c'est recouvrir d'un grossier badigeon des nuances délicates, et détruire, d'un coup, notre lent travail de mise au point minutieuse et de création d'atmosphère. La traduction dans nos classes peut être utile, sans doute; elle est même indispensable pour fixer, pour contrôler, pour clôturer une explication; mais elle constitue un exercice indépendant, et d'un intérêt secondaire. Nous pourrions estimer que notre méthode a porté ses fruits si nous voyons nos bons élèves s'en montrer peu soucieux ou s'en déclarer eux-mêmes insatisfaits.

By "ESCHOLIER."

The words of different languages do not exactly correspond with each other, and it is but seldom that they can be placed side by side. No bond of interdependence exists; where you find one accidental resemblance you will find half a score of dissimilarities. A nation's language is perfectly adapted to its intellectual and moral development, and, owing to that very cause, it is exclusively peculiar to itself. Each word brings in its train a host of associations and recollections, of unconscious and hereditary impressions, impossible to translate. To take but one example, we appreciate, in France, the attraction of the fireside, the charm of the light and bright room, where, amid the intentional disorder of the picturesque furniture, the hours pass lightly by in pleasant converse, where the children are admitted and petted, where well-being, good taste and luxury are harmoniously blended; but we are ignorant of the substantial comfort of British interiors, the tonic and virile cordiality, nearly always accompanied by a moral influence, which reigns therein, the restful charm of those capacious arm-chairs in which to recline is "like a triumph gained over hostile existence," the quiet of the long winter evenings to which we are predisposed by the damp, cold climate, and often by the excitement of city life. So that the *douceur du foyer* (charm of the fireside) is, for a Frenchman, quite a different thing from the "home, sweet home" of an Englishman. To translate one by the other is to cover delicate shades of meaning with, so to speak, a coarse wall-paint and to destroy at a blow our slow work of minutely focusing and creating an atmosphere. Translation may be useful in our classes, of course; it is even indispensable in order to fix, to verify, to round off an explanation; but it constitutes an independent exercise, and is but of secondary importance. We may consider that our method has borne its fruits if we see our best pupils take little interest in, or declare that they are dissatisfied with it.

An anonymous competitor takes us soundly to task for the passage set last month. "Such a piece of literature ought to be written in *correct* language. '*Trépidante*' is not french (*sic*) and so is '*insatisfaisants*.' Besides, the last sentence violates the rules of grammar." To point out that our correspondent's critique is not written in correct English would be "unsatisfactory," and we

(Continued on page 600.)

THE CARSON SMITH MATHEMATICAL SERIES

By G. ST. L. CARSON, M.A., M.Sc., Reader in Mathematics in the University of Liverpool, formerly Head Mathematical Master in Tonbridge School; and DAVID EUGENE SMITH, Ph.D., LL.D., Professor of Mathematics in Teachers College, Columbia University.

In examining this series of mathematical textbooks progressive teachers will be interested in the way in which Mr. Carson and Dr. Smith have developed the subject, the careful explanation of the various points, the large and varied amount of practical problem material, and the attractive get-up of the books.

ELEMENTS OF ALGEBRA

Part I.	346 pages.	Price 3s. 0d.
Part II.	214 pages.	Price 2s. 6d.
Parts I & II.	538 pages.	Price 4s. 6d.
Part III.	In preparation.	

In the introductory chapters of this book the authors proceed upon the assumption that the pupil has a thorough grasp of the elements of arithmetic, and their aim is to generalize this previous knowledge by means of the formula. Great care is devoted to imparting a true conception of the significance of positive and negative quantities. Graphs are treated in a manner which is simple and direct, and emphasis is placed upon the function as the basis of all graphical work. Factors receive a more systematic treatment than usual, and a first course of logarithms concludes Part I.

Part II opens with a thorough treatment of surds. Mathematicians will note that square and cube roots are dealt with by the correct method of indeterminate coefficients, and that the latest suggestions have been adopted in the development of the theory of variation. The course is continued far enough to cover the syllabus of any final school examinations not intended for specialists in mathematics, and concludes with an essay on the history of Algebra.

A special feature is the practical nature of the problem material, and the choice of illustrations throughout should prevent the subject from appearing dry and uninteresting to the pupil.

PLANE GEOMETRY

Part I.	266 pages.	Price 2s. 6d.
Part II.	228 pages.	Price 2s. 6d.
Complete.	486 pages.	Price 4s. 6d.

In this Geometry the authors have recognized the impracticability of teaching geometry to the boys and girls of to-day in the form that was suitable for the Greek adult of 300 B.C., but, on the other hand, they have avoided the illogical attitude of modern extremists. They introduce their subject carefully and systematically by means of examples entailing a certain amount of geometrical thinking, and then, having paved the way for the purely theoretical work, they suggest a certain flexibility in regard to postulates in accordance with recent practice and recommendation by teachers of experience. Each proposition is accompanied by a large variety of exercises and practical illustrations, and the aim of the authors has been to develop in the pupil a facility for the solution of riders.

Part II begins with a very full development of the theory of circles, and due emphasis is placed on the limited definition of the tangent. Many teachers will be interested in the separate book on regular polygons, and for the first time in a school textbook they will find a treatment of maxima and minima in systematic sequence. The requirements of the various public examinations have received due recognition, and the book contains many examination hints and practical suggestions.

A FIRST FRENCH SONG BOOK.

AIRS AND TONIC SOL-FA.

By R. B. MORGAN and F. B. KIRKMAN.

New Edition. Price 6d. Containing 10 additional Songs in Phonetics.

FIRST (REFORM) GERMAN BOOK.

BLACK'S FIRST GERMAN BOOK.

AN ELEMENTARY COURSE ON DIRECT METHOD LINES FOR THE FIRST YEAR.

By L. H. ALTHAUS, Organizing Mistress in Modern Languages to the West Riding Education Committee, Yorkshire.

Price 2s. 6d.

A Phonetic Edition of the first part of the book is also in the press.

AUTHOR'S NOTE.

In adding yet another to the many First-Year Books already in use, I had very definitely in mind certain needs, which in my experience both as Teacher and Inspector of Secondary Schools I felt had not yet been met.

The ease with which an average class assimilates the usual early German Vocabulary affords an even greater temptation to the teacher to go too quickly than in French. As an inevitable consequence, in so highly inflected a language as German, the scholar is plunged into the difficulties of Declension and Case long before he has had sufficient practice in the simpler but all-important matter of Gender, with the result that he is more or less always struggling with both difficulties at the same time. This is contrary to all Direct Method Teaching rightly understood, and is responsible for most of the failures of which we hear. (It is because the underlying principles of Direct Method Teaching are too often so superficially understood that results are disappointing.)

In taking the earlier and simpler side of German life for my text, I have hoped to provide a more sympathetic material than that perhaps afforded by a more modern side, and at the same time a vocabulary of everyday life suited to the requirements of the Scholar of the First Year.

"The Journal of Education."

Copies of *The Journal of Education* over twelve months old are now charged double price, and those more than three years old, treble price.

For a list of Numbers, Volumes, and Binding Cases, still in print, apply to the Publisher:

WILLIAM RICE, Junior, 3 Ludgate Broadway, E.C.

refer him and our readers to the book itself (Henri Didier, Paris, 3.50 fr.) and to the Preface by Émile Legouis, who tells us that the author gives in it the results of his eight years' experience as a teacher of English in the University of Lille, and commends him as "lui-même poète et critique délicat de la poésie."

The commonest fault was a word-for-word rendering. Thus, in the first sentence, I would suggest: "In no two languages do words exactly tally, and it is but rarely that they cover the same ground. No word is the exact counterpart of the other; between the pair there is no pre-established harmony." "Juxtaposition" and (later on) "personal," without some qualification, are unsatisfactory. *Claire et coquette*: "well-lighted, dainty," "stylish" is a hopelessly vulgarized word. *Savant désordre*: "this studied disarray." *Où l'on admet*: "where children are welcomed and petted." To translate *bien être* by "comfort" is an obvious fault. "Comfort," used later, is a distinct English word. *Moralisante*: "with a moralizing (or edifying) intention." *Comme un triomphe*: "a victory in the battle of life," or "over our arch-enemy life"; few observed that this is a quotation, whence I know not. *Recouvrir*, &c.: "to blurr with a coat of whitewash all the delicate lights and shades." *Mise au point*: "focusing." *Fixer*, &c.: "defining, checking, and clinching an explanation."

The prize would have been awarded to "Erigena" but for the unfortunate omission of a whole clause.

We classify the 105 versions received as follows:—

First Class.—Isaac, *obéls*, J.R., Menevia, Émile, E.M.P., M.O.W., Boetius, M.S.B., Erigena, Gothicus, Sirach, Escholier, Rude donatus, Motter.

Second Class.—Pico, Hampstead, T.S.M., Nutcracker, St. Edmund, Chislehurst, D.M., Traveller, Trix, Cendrillon, XX, Pat, A.J.D., Traduttore—Traditore, Lesbia, Augusta, F.W.D., Borealis, A.S., P.O.L., Desperation, S.W.L., Hint, Nil Desperandum, Shan, Ex humilibus excelsior.

Third Class.—Commentator, Garnet, The Fox, Perdita, Student, Dane, Rastra, Moriando Vivo, Beetle, Mac, B.W., Joseph, K.E.M.D., Talbot, E.M.D., Eugène, E.A.S., Lierre, Aquae Sulis.

Fourth Class.—Pixie, Georgibus, Verka, G.C., B.E.S., Avalon, Ibo, Batcha, Alan Terry, W.H.S., Lux, Condon, Alphonse, Chums, Vasca, S.E.A., Motif, G.M., Moses, Adsum, Capet, Tontine, Labrador, Onoto, Billie, Tam, Mater, R.O., B.T.

Fifth Class.—Ross, S.A.T., Nogs, U.U., Par, Molly, Pula, W.P.U., Peau, Rus, Conop, St.A., O.T.C., Dindam, Girlie, Kent, Mona, Goupil.

A Prize of Two Guineas is offered for a list of the "Four greatest living Educational Reformers, with reasons for the choice."

In another column will be found the four selected by Dr. Sadler. In assigning reasons it may be indicated why any or all of these are rejected, but the reasons should be briefly stated.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners will be required to send real names for publication.

All competitions must reach the Office by October 16, addressed "Prize Editor," THE JOURNAL OF EDUCATION, 3 Broadway, Ludgate Hill, E.C.

MESSRS. SAMPSON LOW, MARSTON, & CO. are making special efforts to meet the demand for textbooks on the Russian language. They have recently issued the first and second courses of *Russian Grammar*, a *Russian Grammar Key*, and a series of Russian copy-books—all excellently produced and likely to be of great service to students. In addition to the books named, they have also published an *Alphabet of Russian Grammar*, designed to smooth the path of the beginner. The whole series will form a useful set of textbooks for evening classes and for others who are undertaking the study of Russian.

DUSMO
The Dusless Sweeping Powder

WHY NOT HAVE A CLEAN BILL OF HEALTH?

DUST In your SCHOOL is the CARRIER of **DISEASE** which may ATTACK those least able to resist it. You can REMOVE this **DANGER** by the use of DUSMO when sweeping.

A line of DUSMO laid down and swept before the broom will prevent dust rising, and so dry scour the floor as to render wet scrubbing an unnecessary expense, thus effecting

A GREAT ECONOMY IN YOUR CLEANING BILL.

Copy of Letter recently received from a well known College:—

"We have completed a period during which DUSMO has been severely tested, and I am now convinced of its efficacy, although I was at first sceptical as to its merits. You will need no better testimonial than the accompanying order for six more bags."

MODERN LANGUAGE MISTRESSES.

Assistant Mistress in January for Boys' Preparatory School in Ireland, to teach French acquired abroad, with other subjects. Training and experience essential. Res. £80 to £90, or could be made non-resident.—A 55226.

MODERN LANGUAGE MISTRESSES (cont.).

French Mistress required in January for Girls' Public Secondary School in Midlands. Subsidiary elementary Mathematics. Experienced teacher essential, preferably with residence abroad. Non-res. £120.—A 55861.

MATHEMATICAL AND SCIENCE MISTRESSES.

Mathematics Mistress in January 1916 for large Nonconformist High School in South Africa, to prepare for Cape Matriculation and to take charge of Form 6b. £100 to £120 res.—A 55535.

Mathematical Mistress for important Public High School in Channel Islands. Good qualifications and experience essential. Good salary, resident, to be arranged.—A 55378.

Assistant Mistress in January for Endowed Boys' Secondary School in North of England, to teach Mathematics and Chemistry. Drill a recommendation. Good salary, non-res.—A 51898.

Assistant Mistress in January for good Secondary School in Surrey, to teach Nature Study and Mathematics in the Lower School. Games, English, or Music a recommendation. Degree essential and experience desired. £110 increasing £5, non-res.—A 55719.

Science Mistress in January for important Girls' School in South Africa, to teach Science to Matriculation standard. Res. £100.—A 55532.

Science Mistress in January for Endowed Mixed School in N.W. England, to teach Botany, Geography, elementary Physics. Games an advantage. Non-res. £100 to £130 or more increasing to £170.—A 55457.

Assistant Mistress in January to open Science Branch at high-class Private School in Home Counties. Keen, capable teacher of general elementary Science required, offering in addition one of the following: Botany, Geography, Mathematics, English. A Churchwoman essential. Res. good salary according to qualifications, &c.—A 55497.

Senior Mistress in January for County Secondary School in the South-west of England, to teach Mathematics and elementary Science. Experience and Churchwoman essential. Res. £90 to £100.—A 55136.

Chemistry Mistress in January for Girls' Secondary School in University City. Non-res. £140 or more.—A 55105.

KINDERGARTEN MISTRESSES.

Kindergarten Mistress in January for Girls' High School in India. Froebel training and experience essential. Non-res. £160 and passage.—A 54426.

Kindergarten Mistress in February 1917 for Boarding and Day School in Natal, able to train students. Res. £90 to £110 and passage.—A 54788.

ART MISTRESSES.

Art Mistress at once for large Public Boys' School in North of England. A.R.C.A. or A.C.T. or some equivalent, and experience. Non-res. £100 or more.—B 55808.

Art Mistress for good-class Private Boarding School in North of England. Good Painting. Ablett's Drawing and Junior Music. Res. fair salary.—B 55832.

MUSIC MISTRESSES.

Violin Mistress in January for good-class Private School in Midlands. Good Violin. Ability to conduct school orchestra. Res. school experience. £50 res.—B 55700.

Singing and Elocution Mistress in January for large High School in South Africa. £100 res. plus extra fees.—B 55597.

Music Mistress in January for a Private School in South Africa. Violin the first subject; Piano, Harmony, Theory second subjects. Res.—A 55646.

Music Mistress in January for high-class Boarding and Day School in Canada, to teach Pianoforte (performer) and Singing. Res. £83 increasing and passage.—B 53473.

Violin Mistress in February for large Secondary Day and Boarding School in South Africa, able to take a small orchestra and assist with some other Music subject. Res. £90, increasing to £110, and passage.—B 55394.

GYMNASTICS MISTRESSES.

Gymnastics Mistress at once for high-class Private Home School near London. Physical and Remedial Drill, Hygiene, Games, Needlework, very elementary English. Very little supervision and week ends free. Res. £40.—B 55831.

Gymnastics Mistress for Physical Training College in West of England, trained on Swedish system. A lady over 28 able to take responsibility. Res. post, good salary.—B 55416.

DOMESTIC SCIENCE MISTRESS.

Domestic Science Mistress at half-term or in January, for large Secondary Boarding School near London. Cookery, Needlework, Housewifery, and supervision of wardrobes. Church of England. Res. from £50 upwards.—B 55796.

STUDENT-TEACHERS.

Messrs. TRUMAN & KNIGHTLEY always have on their books a large number of Vacancies for Student-Teachers on mutual terms or at moderate premiums.

LADY MATRONS AND HOUSE MISTRESSES.

Messrs. TRUMAN & KNIGHTLEY assist qualified Lady Matrons, Housekeepers, and House Mistresses to find appointments in Boys' and Girls' Schools.

Ladies desiring further information of any of the above and of other suitable Vacancies should write fully to Messrs. TRUMAN & KNIGHTLEY, stating their age, qualifications, &c., and enclosing copies of their testimonials.

NO CHARGE OF ANY KIND is made to Applicants unless an engagement be secured through this Agency, when the terms are reasonable. Prospectus, terms, &c., will be forwarded on application.

SCHOOL TRANSFERS & PARTNERSHIPS.

A separate Department, under the personal management of one of the Directors, is devoted entirely to the negotiation of School Transfers and Partnerships.

No charge is made to purchasers.

BLACKIE & SON'S NEW LIST

In these days of economy experience has proved that Messrs. BLACKIE & SON'S Books take a foremost place by reason of their scholarly editing, clear type, strong binding, and reasonableness in price.

ROMAN LIFE AND CUSTOMS.

A Latin Reader. By R. A. A. BERESFORD, M.A., Headmaster of Lydgate House School, Hunstanton; formerly scholar of Selwyn College, Cambridge, and E. C. SMITH, B.A., formerly scholar of Corpus Christi College, Oxford. With Vocabulary. Illustrated. 2s.
A simple account of some of the principal features of Roman life, mainly confined to the later days of the Republic.

SOME PARALLELS and DIFFERENCES IN GREEK AND LATIN SYNTAX.

By REV. C. ANNACKER, S.J., B.A. 9d.
For candidates at Examinations such as the Certificate, Higher and Lower, Oxford Locals, London Matriculation, and the like.

ON THE WRITING OF ENGLISH.

By GEORGE TOWNSEND WARNER, M.A., sometime Fellow of Jesus College, Cambridge; Master of the Modern Side in Harrow School. 3s. 6d. net.

HOW WARS WERE WON.

A Short Study of Napoleon's Times. By GEORGE TOWNSEND WARNER, M.A., sometime Fellow of Jesus College, Cambridge; Master of the Modern Side in Harrow School. With many Maps and Diagrams, some in colour. 5s. net.

Professor Spenser Wilkinson in *The Oxford Magazine* says: "I found it delightful to read. It is clearly and simply written, it describes a number of the most interesting campaigns, and it gives a true account of the great principles of war. When anyone now asks me for a good introduction to the subject of war I tell him to read Mr. Townsend Warner's book."

THE MAIN STREAM OF EUROPEAN HISTORY.

By Rev. FREDERICK HARRISON, M.A., Senior History Master, Rutherford College, Newcastle-upon-Tyne. 1s. 6d.

EUROPE SINCE NAPOLEON. (1815-1910.)

By ELIZABETH LEVETT, Tutor in Modern History, St. Hilda's Hall, Oxford. With 10 Maps (2 in Colour). 3s. 6d.
"The author has done her work well. The essential points are never missed, and, however rapid the survey, the reader never loses the sense of continuous and closely related international narrative. . . . Miss Levett has an admirably clear and firm style, and her competency is manifest."—*Pall Mall Gazette*.

Just Published. Sequel to "Le Livre Rouge."

LE LIVRE BLEU.

A SECOND BOOK OF FRENCH IN COLOURED PICTURES.

By E. MAGEE, Edgbaston High School for Girls, Birmingham.

With Sixteen Full-page Coloured Pictures and many other Illustrations. Demy 8vo. 2s.

LOWER GRADE SYNTAX AND COMPOSITION.

By JAMES M. MOORE, M.A., and JOHN SLIGHT, M.A. Crown 8vo, cloth. Price 1s. net.

THE ENGLISH COUNTRY GENTLEMAN IN LITERATURE.

By G. N. POCKOCK, M.A., Royal Naval College, Dartmouth. 1s.
A sketch of the character of the country gentleman as represented in English literature, beginning with Chaucer's *Franklyn* and tracing the development through the Stuart period and the eighteenth century, when the country gentleman figured so largely in the writings of essayists, novelists, and dramatists, down to the nineteenth century, and the writings of Dickens and George Eliot. The text takes the form of extracts from standard writers, with introduction and running commentary by the editor.

A JUNIOR CHEMISTRY.

By W. WILLINGS, B.Sc., Senior Science Master, Municipal Secondary School, Brighton. 2s. 6d.

A course dealing mainly with the experimental facts of Chemistry; it covers the syllabuses of the Oxford and Cambridge Junior Local Examinations, and a large number of questions set at these examinations will be found at the end of every chapter.

ELEMENTARY CHEMISTRY for RURAL SECONDARY SCHOOLS and AGRICULTURAL COLLEGES.

By ERNEST JONES, M.Sc., Science Master at the Aberystwyth County School, and J. JONES GRIFFITH, B.Sc., Lecturer in Agricultural Chemistry at the University College of Wales, Aberystwyth. 2s. 6d. net.
Choosing its examples from the farm, the garden, and the dairy, this book provides a sufficient knowledge of the principles of chemistry to enable students to proceed to an intelligent study of agricultural chemistry.

CARLYLE—THE HERO

AS PROPHET, MAN OF LETTERS, KING. From *Heroes and Hero Worship*. Cloth limp. 1s.

THE STATE & SOCIAL WELFARE

AN ELEMENTARY HANDBOOK FOR YOUNG CITIZENS.

By J. W. PECK, M.A., F.R.S.E.

Price 1/6.

The aim of this handbook is to explain, in clear and non-technical fashion, the various forms of State action which have for their object the care of the individual and the promotion of social well-being. These are described in order as they influence the citizen from infancy to old age.

The wide experience of the author in educational and other administrative work ensures that the book is not only interesting, but reliable and adequate in its treatment.

THE DEVELOPMENT OF SUMMER SCHOOLS.

A COMMONLY noted characteristic of teachers is their tendency to keep too closely within the orbit of school interests and concerns. In this they are perhaps no more open to criticism than the members of any other profession. Clergymen, doctors, lawyers—indeed, all who have to earn a living—must be largely restricted in their pursuits, and of necessity devote much of their thought to the profession or business by which they live. The circle of their acquaintance will include many engaged in similar work, and their conversation will assume the inevitable flavour known vulgarly as "shop." For the teacher these pitfalls have yet another, and a more dangerous one, added to them. The broad professional interests tend to be subordinated to the concerns of a particular school, or even of a form or subject. There are many teachers who have never seen any school save the one in which they happen to be working, have seldom thought of the principles of their craft apart from their own limited experience, and will not willingly recognize any obligation towards teaching as a life work. They prefer to cultivate a pompous unconcern towards such urgent questions as the registration and training of teachers and the study of teaching method. Tacitly they support the view of the less informed outsider, who thinks that teaching is easy work, and therefore need not be highly paid.

The race of troglodytes is doomed to extinction in due course, and when the final obsequies shall be rendered to the ultimate survivor it will be found that he and his kind have been helped out of existence by the summer schools. It is these institutions which bring together every year increasing numbers of the younger and more enthusiastic teachers, affording them valuable opportunities for instruction and even more valuable facilities for exchanging views and opinions. During the recent summer holidays no fewer than twenty schools were carried on, and, at the lowest estimate, the attendance must have approached three thousand. The reports which follow will serve to indicate the wide range of subjects included in the curriculum of the various schools. More important perhaps than the list of lecturers and of topics is the note of enthusiasm which runs through the recorded impressions of students. A summer school of the right kind serves as a tonic and an inspiration to the teacher. Difficulties are found to be shared by others, and the informal talks and discussions lead to many efforts at solving them. The social and holiday atmosphere finds its proper place, and there is good reason for holding the schools in centres which afford scope for excursions and for the study of places of historical or archaeological interest. The holiday spirit, however, is strictly subordinated to the main purpose of the meeting. Indeed, in some of the schools there is a risk of overworking the students. This is especially the case in schools which are organized to offer training in handwork subjects. The desire to obtain a certificate or diploma leads some students to become over-eager in the making of models and to forget that models are unimportant in comparison with the principles which underlie them.

The past two years have seen the rise of the Uplands Association and of the school organized at the Woodbrooke Settlement by Mr. F. S. Marvin. Each of these schools has already accomplished some notable deeds, and both seem likely to become centres of wide-spreading activity. The Conference on New Ideals in Education has also held a highly successful meeting, and the numerous "subject-conferences" have been well attended. It is fitting that both types of gathering should develop together. Among the earliest summer meetings in this country were those in connexion with the Extension Lecture movement. These were designed to bring together the students from all parts of England, and to offer them the opportunity of living for

a brief period in the Universities under whose auspices they had been studying. The idea of a subject school was probably borrowed from Sweden, whither many students of handwork had journeyed to practise Sloyd exercises at Nääs. Others went to Leipzig for the summer course in woodwork, cardboard modelling, or metal work. Several of these pilgrims were among the founders of the Educational Handwork Association, which has for some years past conducted successful schools at Scarborough and Falmouth. A notable development has been the institution of schools by Local Education Committees, such as those organized by the West Riding County Council at Bingley, by the Glamorgan Education Committee at Barry, and by the Education Committees of Staffordshire and Shropshire at Newport, where the Harper Adams Agricultural College has been utilized for the purpose of giving to teachers a course of training in rural subjects.

This last-named enterprise illustrates one of the possible dangers of summer school development. It will be unfortunate if teachers are encouraged to hope that by attending a short holiday course they may become qualified to teach handwork, physical drill, or horticulture. It should be regarded as an axiom that, if a subject is introduced into the curriculum of our schools, teachers must not undertake it until they are thoroughly prepared. The idea that the subject can be mastered in a few weeks suggests at once that it is of slight importance. This warning does not, however, diminish the value of summer schools, even in the subjects mentioned. The short course gives a survey of sound methods, and stimulates the interest of the teachers. Many of these return year after year, finding in the summer school the means of enjoying a profitable holiday.

Signs are not wanting that for teachers of the future there will be available a still wider choice of schools, and the interesting possibilities of the Woodbrooke meeting seem to promise a development of schools for working people. The movement is in its early stages as yet, but all who are concerned in education will watch its progress with interest. We look forward to the time when every University will have its vacation school, open to workers of all types, and conducted on the broadest possible lines. The teachers who have given up a part of their holiday to meeting their fellows in conference will assuredly return to their work with new ideas and inspiration.

BANGOR.

THE UPLANDS ASSOCIATION, AUGUST 4-21.

The second Annual Gathering of the Uplands Association was held this year at Bangor. The official report is appended, together with a brief impression from the pen of a student.

1. Summer Meeting, August 4-21, 1916.

This Second August Meeting has shown to all of us that the methods of promoting educational reform which we have adopted are worth pursuing. First and foremost we welcome the opportunity of both formal and informal conversation, and discussion and exchange of opinion. A fortnight is the shortest time in which such exchange can be effected. We arrange for regular classes and lecture courses, but these are only a means to an end. By many routes we hope to reach a clearer conception of those large and far-reaching principles which must underlie any thorough program of reform.

The daily program begins with a lecture (followed perhaps by twenty minutes' discussion) addressed to the whole meeting. The latter part of the morning, summer classes of small size are arranged, offering a choice of studies. One group, especially those engaged in training college work, have worked at psychology and child study; another has dealt with social aspects of education; and a third group, in-

cluding the parents who have joined us this year, have given special attention to relations of home and school.

In the afternoons, "practical" courses are available. Nature Study and Gardening, Scientific Housekeeping, Eurhythmics, and singing have been selected, because work in these directions seems not only to be congenial to the holidays but to be helpful in discovering directions in which "reform" is to be sought. No one can pretend to become a qualified gardener in a fortnight, but the time is adequate to come into real relations with the soil and the plants, and it is our business to find in these special pursuits the universal elements which make them so important to the rising generation. As the years pass we shall probably introduce new "subjects," both in the practical classes and in the theoretical work of the morning hours—such as the direct method of language teaching, geography, and regional survey. Prof. Shelley would this year have conducted a course of practical work in literature if he could have been released from military duties.

Whatever new studies are introduced, they will conform to the same purpose—finding relations between the narrow field of the special student and the complete life of the child on whose behalf we are engaged. There are many Summer Schools which teachers can attend who desire to qualify in various subjects; we do not aim to compete with those, but to complete, and if need be revise, their point of view.

Among those attending the first meeting at Glastonbury, 1915, were two or three families with young children. Their presence among us was not only delightful, but most helpful to our work. We therefore decided to invite parents to spend their holiday at Bangor, bringing their children, for whom we undertook to provide classes for a few hours each day in pursuits congenial to a holiday time, such as Nature Study, Handicrafts, Eurhythmics. So far the response to this invitation has been small, doubtless largely due to war conditions, but we shall repeat the plan next year, for we feel very sure that our efforts to investigate educational reform will be helped by bringing into the circle of discussion and of enterprise those who look at our problems from the point of view of thoughtful parents. We believe that, when the plan is more widely known, it will be appreciated, and parents will be glad to join us both on their own behalf and for the children's sake. It is not our purpose to establish an elaborate scheme of holiday classes for children; to do that would divert us from our main purpose. But by having a certain number of children we can do something, even in the short period of a Summer Meeting, to "demonstrate" the relation between theory and practice.

In addition to the advertised program the students arranged among themselves several conferences on topics which they found of special interest, a concert was offered to wounded soldiers from a neighbouring hospital, folk dancing was enjoyed in the evenings, and an interchange of meetings with the Summer School of the Workers' Educational Association, also held in Bangor, was of mutual benefit. Finally, we had the rare privilege of a visit from Prof. Patrick Geddes on the last days of the meeting.

The neighbourhood of Bangor has afforded us a delightful holiday. The two Wednesday afternoons and the middle Saturday have been set apart for excursions; those who entered for the nature study course took additional excursions. With the Snowdon Range and Anglesea, with Aber and Penmaenmawr along the coast, and the castles of Conway, Carnarvon, and Beaumaris, more was offered to us than the time at our disposal could cover. For this reason we feel that the plan of arranging for one week-end at Bangor before the program of lectures, and another at the close has been justified.

The Normal College is an ideal home for students of education, and Principal Harris has given us a genial welcome.

It is too early as yet to make plans for 1917, but, if the way opens, the general feeling of our members indicates a wish to visit Bangor next year. Not only do the hostels serve capably for the bulk of our students, but Upper Bangor has ample resources in lodgings to meet the needs of

families, and we have been greatly indebted to Miss Pritchard for helping them to find suitable accommodation.

II. The "Uplands Circular."

The centre of interest for the members is the Summer Meeting, and face-to-face intercourse is indispensable in order to find common ground. Some of us may come every year, some only once in two or three years, but our business will always be chiefly done on the spot, not only in organized conferences, but in less formal ways. We find, however, during the rest of the year we need to keep our minds on the common theme, and we have therefore embarked on the *Uplands Circular*, which, although a somewhat costly undertaking, has been found of real use, and we propose to continue it as long as funds permit. Not only does it enable us to report on schools, as stated in our aims, and to review books which throw light on our problem, but it helps students to carry on throughout the year those studies which lecturers have opened up at the meeting. Dialectic, however, soon leads the earnest student to project. We are not satisfied with talking about educational reform, nor even with helping another in improving the details of our varied duties in school or college. This is important, no doubt, but we have come to see that the entire school-life of the child needs to be handled with outspoken and radical reshaping, if the theories we hold by are to be put to a thorough test. If at this moment we had the power (which, roughly, means money to pay the salaries of a few teachers), we should at once start a school, collecting at least a few children, and helping them to live the kind of life which we believe their nature and development demand. But, until we are entrusted with this power, we can render practical service, as well as prepare ourselves better to undertake such a task, by reporting on schools which have been avowedly established to achieve reform. In the *Uplands Circular* we have published accounts of two enterprises:—The Coombe Hill School, at King's Langley, and the Caldecott Community, in St. Pancras, London. We are constantly hearing of others, and, in default of any other agency which will undertake to examine into such institutions, we think that we are fulfilling a useful public service, both in calling attention as widely as possible to the value of such pioneer work, and by inviting the workers to join hands with us and with each other. Some of these schools which have been visited by one or other of us, may be mentioned here, as deserving, in a greater or less degree, of close study—e.g. The King Alfred School, in Hampstead, whose Head Master has been with us at this year's Bangor meeting; The Little Commonwealth, already widely known through the addresses and reports of its Superintendent, Mr. Homer Lane; Dr. Reddie's School, at Abbotsholme, and the Bedales School, at Petersfield, the two latter now at work for over twenty years. The Perse Grammar School, at Cambridge, is not by foundation a pioneer school, but the genius of its head master is enabling it to take rank in this company; and, among public elementary schools, the work of Mr. Arrowsmith in the Mixenden Council School, Halifax, can equally be described as pioneer both in theory and practice. Of another type, but quite instructive in its organization and aims, is The Boys' Scout Farm, established in Kent, by Sir R. Baden Powell. Other enterprises are on the way: Miss Isabel Fry has issued a circular describing the Parm School which she is about to establish at Great Missenden, Bucks, not to train farmers, but to educate boys and girls. In the *Venturer Magazine*, June 1916, reports are to hand of the Venturer's School, which designs to care for neglected children somewhat on the principles of The Little Commonwealth.

In all these institutions, and doubtless in others unknown to us, we believe that common principles of reform may be discerned, some to be traced back to earlier epochs, to Froebel or Pestalozzi, but others characteristic of our own era. No doubt there may be eccentricities in some of them, which time will show to be unserviceable; but our business as students is to seek for what is common to them all, and to find for them a basis in child study and in philosophy. Many of us, engaged in public or private institutions, with all the limita-

tions on personal freedom which these inevitably create, cannot actively share in pioneer work, but we study them and find benefit from association with those who carry on such work.

Although we see no immediate prospect of a school arising directly out of our own efforts, we are getting our ideas into shape, so that, if the way opens, we can be ready. Prof. Shelley, in his visit to us at Bangor, sketched in detail the plans he thinks can be realized as regards a public elementary school, and these have been discussed with great interest. We have also considered how far it is feasible to set on foot a country school for parents who have the means to pay for their children's education. It is intended in the near future to publish sketches of these two proposals, together with an exposition of the principles underlying them.

III. Statement of Principles.

We have found that it assists our thinking to try to define by brief statement the essence of the "reformed" ideas of which we are in search. For that purpose the Committee undertook last year to draft a series of statements, and have been engaged during this year's meeting in adding to these some considerations on physical education. As an Association we are by no means committed, either as individual members or as a body, to express our belief in one or other of them; we do not profess a creed or seek adherents on that basis. But they stand (see below) as theses which can be defended, and as formulating in brief phrase what we think embodies the trend of "reformed" opinion. They are, of course, subject to revision, and we intend to go forward, as time permits, treating of all topics within our sphere that seem to be of real importance.

Principles of Reform in School Life and Teaching.

1. All types of schooling to be pursued so far as climatic conditions will permit in the open air.
2. The school should form a centre for communal activity in which the scholars realize their domestic, industrial, and civic dependence upon their fellows.
3. Individual differences in child nature, and the study of stages in development, should be recognized in any reform of school practice.
4. Balance should be maintained between intellectual, æsthetic, and practical experience, in contrast to the traditional curriculum of schools which exalts unduly the sphere of knowledge as a factor in human development.
5. It is incumbent on places of education to promote mutual understanding and respect between the two sexes; especially at the present epoch, when public opinion is recognizing the partnership of men and women in public affairs.

This duty can be discharged—(a) by extending the association of men and women teachers on the staffs of schools and colleges. (b) By investigations as to the limits within which co-education can be approved. Experience indicates the benefit of co-education up to the age of eleven or twelve years, and again after the age of eighteen. During the intervening years separation may be advisable, not only in the pursuits followed by scholars, but in school attendance; unless a new type of school community could be devised which would recognize the instinctive desire for separation, as well as the benefit gained by social experience. Inquiry along such lines is therefore advocated. (c) By associating fathers and mothers more closely with the aims and methods of the school to which their children belong.

6. Under normal circumstances, a scholar should be educated at home, or in a school near his home, at least until the age of eleven or twelve years.

IV. Membership.

The names of members are printed in successive issues of the *Circular*; so far 125 have been enrolled. If we attempted to classify the members, we should say that training college lecturers are more fully represented than any other group, simply because their studies make it incumbent upon them to keep in touch with pioneer endeavour; but primary, secondary, and kindergarten teachers, as well as a considerable number of private schools, are represented.

We have not thought it to be within our province to cast the net widely in order to secure a large membership, for we feel that the work will best be done if those who join come of their own motion without solicitation.

We should like, however, to make it clear that membership does not depend upon attendance at a Summer Meeting. Greatly as we are helped by renewing acquaintance in this way, there will always be many who cannot come, and we shall of course welcome both the comradeship and the subscriptions of any, whether teachers or parents, who think that our distinctive way of promoting reform is worth while.

The Committee find that some members can come to the Summer Meeting for a few days, but are unable to attend for the whole period. They therefore propose to adopt a rule for future meetings which will meet their case. Hitherto those who came have been required to pay the entire fee for the program, whether they came for a part or for the whole of the meeting; by the new rule members of the Association who can only come for one week or less will only pay half the fee.

Tutorial Study.—The wish has been expressed that members who are at work on Psychology and Child Study, or on Sociology, should be helped in pursuing further the work they have begun at Bangor with Mr. Jackson and Mr. Hindshaw. The Committee are making arrangements for these, and for any other members who may welcome the opportunity of study. Details will be announced in the next issue of the *Circular* (October). There does not seem to be any plan of directed reading or essay writing suited to the needs of teachers who wish for help (apart from working for examinations). It is thought that the tutorial guidance here proposed may meet a real need.

BY ONE WHO WAS PRESENT.

The spirit of the Uplands meeting is suggested in the prospectus. There are not a few Summer Schools doing useful work, but the need seems to be felt of a meeting ground for those whose interests are not limited to a special line of work, but desire to come into practical relations with those large fundamental ideas which are shifting our educational operations to a new base. The impulsive forces of the meeting drove away from departmental thinking. There was no room for discussion of how to "teach" a "subject," and no wish for it. There was little didactic exposition, much clearing of speakers' thoughts, much "thinking aloud." Prof. Findlay's theme was the social bases of education—a broad sociological study rather than a treatment of technical issues. Prof. Campagnac on "Speech and Silence as Means and End in Education" was boldly non-technical. "We are none of us at home; we feel we are not at home—we want to go home. Education is going home." And Prof. Patrick Geddes, with his plans for the ideal University and his regional survey of philosophy, uttered the same cry—flee the littlenesses of conventional practice, break down the compartments in which you grope, seek the abiding truths.

Yet the meeting was no mere floating in a cloudy idealism, as the program shows, and it is an earnest of enlightenment in spirit and deed that so many heavily worked practitioners should forgather in such days as these for so disinterested a study as the Uplands Meeting evokes.

BINGLEY.

VACATION COURSE FOR TEACHERS, AUGUST 2-16.

Under the auspices of the Education Department of the West Riding County Council, a Summer Vacation Course was held at the Bingley Training College from Wednesday, August 2, to Wednesday, August 16. Teachers in the West Riding were offered special facilities in the shape of grants in aid of their expenses, but for others the fee, inclusive of board and residence, was £4. 10s. The course of study included lectures by Prof. Adams (General Course on Education), Dr. John E. Borland (Music), Mr. A. Burrell (Story-Telling and Reading), Dr. O. V. Darbishire (Plant Life), Dr. Garstang (Animal Life), Miss Swanson (Needlecraft), Miss Plaisted (The Teaching of Young Children), Miss Suddards (Hand-

work), Miss E. Perry (Organized Games), Miss Irons (Domestic Subjects), Miss Paine (English).

Special lectures were also given by Mr. J. L. Paton on "Widening Circles of Education," by Mr. Will Rothenstein on "Civic Art," and by Mr. E. J. Dent on "The Appreciation of Music."

Over two hundred students were enrolled, accommodation being provided in the various halls of residence connected with the College. The library was available, and furnished with the special books recommended for use in connexion with the lectures.

Ample provision for recreation and excursions on the neighbouring moors helped to make the social side of the gathering very successful, and those who attended the Course found it a delightful combination of useful work and enjoyable leisure.

BISHOP'S STORTFORD, HOCKERILL TRAINING COLLEGE.

SUMMER COURSE FOR TEACHERS, AUGUST 2-12.

A Summer Course for Teachers was held here from August 2 to August 12. It was attended by 146 teachers. Classes were held in Handicraft under Mr. Bunn, of the Herts County Council, and Miss Tennant, of Luton; in Needlework, under Miss Dyke, of St. Helens; in Dancing, under Miss Traylor, of Southlands Training College; in Psychology, under Miss Fildes; and in Singing, under Mr. Geoffrey Shaw, H.M.I.

The wish was generally expressed that there might be similar classes next year.

CAMBRIDGE SUMMER MEETING, AUGUST 2 TO 14.

The Tutorial Classes Committee, in collaboration with the Local Examinations and Lectures Syndicate of the University of Cambridge, held a Summer Meeting from August 2 to August 14. The chief topic discussed was "Russia," and this attracted a large contingent of Russian and Polish visitors, including M. Paul Milyoukov, the leader of the first Duma. An account of the meetings from the pen of one who attended is added:—

Russians at the Summer Meeting at Cambridge.

When University Extension lectures were first mooted (was it thirty years ago?) how little could the founders have imagined the vast "extension" that the movement would have. Like other vital organisms, it has had its moments of retardation, and might have been supposed not long ago to be setting in for decay. But the intellectual picnics at which superior persons were wont to scoff have developed into a genuine feature of our social life, and perhaps nothing is more symptomatic of the earnest purposes that inspire English men and women at the present time than the gathering of seekers after truth that has just drawn to its close in Cambridge. As one glanced at the various types taken from all classes and nations—there were Colonials, Indians, Danes, Norwegians, Japanese, as well as the large Russian contingent of lecturers—one observed the prevailing expression of what one might call restful expectancy. "Restful," for these were certainly all "workers," whether in the technical or the truer sense, and this was the form of holiday that they had chosen. And "expectant" because the subjects of study had been chosen with admirable insight, to comprise three of the most important problems that are forcing themselves upon us for solution. The "mystery of pain" was dealt with by men who could speak of it in no abstract and unreal sense, but who had themselves suffered the bitterest pain that falls to the lot of humanity, and which is yet so common nowadays that we cease to heed it. "The dead man's knell is there scarce asked for whom?" And they spoke to hearers not one of whom could have been untouched.

The Theological Section would probably in ordinary cases prove less attractive than the rest, but one gathered that particular interest was evoked by the lecturers on "The

elements of pain and conflict in human life, considered from a Christian point of view," as it was broadly described in the syllabus, and broadly treated in fact. Prof. Sorley, the only layman, was perhaps even more acceptable than the Doctors of Divinity of varied schools of thought, who dealt with Human Freedom, Divine Providence, and the like. Among these, the Dean of Worcester (Dr. Moore Ede) bridged the chasm between sacred and secular by his treatment of competition (1) between individuals and classes within the nation, and (2) between nations. His solution could hardly fail to be the obliteration, so far as possible, of competition in the old economic sense, either as regards (1) or (2). Himself one of the earliest of Extension lecturers, Dr. Moore Ede's economics have always been tinged with what were once regarded as Ruskinian heresies, but which are coming to be more and more the truisms of modern economic doctrine.

The problem of Internationalism, suggested by the above themes, was further developed in the main portion of the Meeting, which was provided partly by lecturers on various Russian and Polish questions, and partly by a distinguished group of actual Russian visitors. These striking personalities brought home to us not only what might be called the accident of the Russian Alliance, but the essential sympathy that exists between the best thought of both countries. In type and appearance, it must be confessed, the Russian professors might—if one had not known to the contrary—have been taken for Germans! Rather, it might be truer to say that they belonged to a European more than a strongly marked national species. The most Anglicized of them, from his long residence at Oxford, Prof. Vinogradoff, seemed perhaps slightly more foreign than the rest. His physical type approaches more to one's idea of the Russian as represented pictorially. Foreign accent apart, however, all the lecturers seemed as closely akin to ourselves in feeling and aspiration as could possibly be wished. In manner, they had neither French suavity nor German arrogance, but a simplicity which one suspects may be a peculiarly native product. A pleasing touch, for example, was the first appearance of M. Paul Milyoukov, the courageous leader of the first Duma, and Master of History at Moscow, who stood quietly before the large audience writing notes on the blackboard, and could hardly be persuaded to come down from the platform and make a formal entrance, preceded by the Vice-Chancellor, who was prepared to introduce him in a neat little speech. Such a want of ceremony could hardly have been met in the academic circles of the Fatherland!

Lord Robert Cecil, in his inaugural address, had already struck the key-note, which later speakers reiterated, that Russians had a love of freedom as great as our own. It was, of course, *de rigueur* to pass over the darker side of Russian government with a light touch, but M. Milyoukov, in his lucid exposition of the history and functions of the Duma, made abundantly clear, not only the strict limitations within which politicians in that assembly are restrained, but his own, and (presumably) his fellow-countrymen's universal desire for political freedom. His tone was restrained, but hopeful, though one detected an undercurrent of something like wistful sadness. That freedom will come to Russia, that she deserves and determines to have it, the professors one and all made manifest. But "peace and truth" may not be in our day! In the meantime, who can doubt that the bonds of genuine international feeling were strengthened by the cordial reception the strangers met with, and which, we learned, had greatly touched and impressed them? On our side, it was perhaps something of a revelation to come face to face with so many fine specimens of the *intelligentsia*, whom one is apt to imagine as mostly inhabiting Siberia!

It has been said, as Lord Robert Cecil reminded us, that one can have as much freedom as one likes in Russia—if one keeps out of politics. But our prevailing obsession with politics was to a very great extent shared by these Russian visitors, and the hopes that they formulated of greater political development for their own country found a fervent

echo in our breasts. It has been customary in some circles to speak contemptuously of the work of the Duma, and to opine that its powers will never be in the least on the same footing with those of the English Parliament. It was interesting, then, to note the great importance attached by one and all the speakers to the epoch-making event of the first summoning of the Duma. It was gratifying to English pride to find Freeman's "History of the Ottoman Empire in Europe" and Seeley's "Expansion of England," referred to as books which had made their mark in Russian Universities. Indeed, there was something that not a little reminded one of the leonine appearance of the late Prof. Freeman in Dr. Struvé's fine shaggy head, and the pleasant twinkle in his eye was another point of resemblance. Both suggested a Norse, even something of a Viking origin. Dr. Struvé, in his exposition of the economics of Russia, showed how colonizing within the Empire itself is continually going on, and that the real conquest of the shores of the Black Sea is the conquest made by generations of peasants who have continually added to the area of cultivation further and further to the south. English writers are oftentimes attracted by the peasantry of foreign lands, and particularly by that of Russia, on somewhat sentimental grounds. They find there something that does not exist now, and perhaps never has existed, in a similar form in England. An outward picturesqueness, direct association with nature, quaint and persistent social customs, go far to conceal the less admirable features of peasant life, its narrowness, superstition, and avarice, which (as we are told by those who know) are the usual concomitants in almost every land where the peasantry form a definite social class. Our Russian guests all spoke well of their peasants as the backbone of the nation. But upon this solid foundation the superstructure of the middle and professional class was necessary, in their view, in order to bring about the true significance of Russia in the polity of the nations.

One half suspected diplomatic influence from other than academic spheres in the close interweaving of Polish with Russian interest that was manifest in this section devoted to the study of "Russia and Poland." M. Roman Dmowski, the leader of the Polish party in the second and third Russian Dumas, to whose influence it is mainly owing that the majority of the Poles have ranged themselves on the side of our Allies, was received with acclamations on that account, as well as from the high sense entertained of his personal merit. His all too brief résumé of the history of Poland indicated her weakness in the political sense as being partly due to the very fact that her institutions were more democratic, and her general civilization more advanced, than those of her neighbours at a period when martial strength was even more requisite than internal good government. Such a presentment opened out interesting suggestions on which many diverse opinions might be held. Certainly M. Dmowski carried his English audience with him, and his strong pallid features gave an impression of force and passion, as well as of political sagacity, that seemed to promise great things.

The Cambridge Suffrage Society, according to their usual custom, had organized a meeting to which the Summer students were invited, to hear from Miss Geraldine Cooke an account of the work done by the Millicent Fawcett Hospital Units in Russia. M. Milyoukov graciously consented also to address this meeting, in addition to his more formal labours. He spoke of the work of his countrywomen during the War, how the women doctors and nurses went into the actual trenches to succour the wounded, while the wives of peasants left behind in the villages carried on the whole of the labour usually performed by the men, and in the absence of the vodka temptation, had been able besides to make enormous savings, which were accumulating for the benefit of the country when peace should return. M. Milyoukov was able to assure his audience that his party, the Constitutional Democrats, or Nationalists, had pronounced themselves in favour of woman suffrage, and he gave still further proof of his interest in women by prolong-

ing his visit to Newnham College, where the meeting was held, to the end of the "at home," instead of hurrying off in a self-important way, after the manner of so many great men.

The third topic with which the meeting was concerned was the Economics of Land, on which Dr. Cranage had again succeeded in gathering a notable number of able experts, amongst them Sir Thomas Mackenzie, K.C.M.G. (High Commissioner for New Zealand), Mr. Christopher Turnor, and Miss B. La Mothe (Agricultural Adviser to the Employment Department of the Board of Trade). If the secret thought of each member of the Meeting were a longing that wars might cease from the earth, and in particular that the present horror might be nearing its end, surely the sum of all the teaching received was to point out a way towards permanent peace, in (1) the organization of life on a Christian basis, (2) the cultivation of international friendships, and (3) the arrangement of landed property according to rules of justice, productiveness, and true economic as well as national freedom. Naturally, there was a complete absence of anything that could be called pacifism, either overt or subintended. But it was evident that the students had gathered together with no ordinary desire to add to their own personal culture, but with a hope—ay! more than a hope—that the fruit of their study would be blessed to the world at large.

LONDON.—BEDFORD COLLEGE.

SUMMER SCHOOL OF THE CENTRAL ASSOCIATION FOR THE CARE OF MENTALLY DEFECTIVE CHILDREN.

This is the second summer school arranged by the Education Committee of the Central Association for the Care of the Mentally Defective; the first was held in Birmingham in July, 1915. Each course lasted three weeks. It is hoped that most students will take two courses (elementary and advanced) in successive years.

The special feature of these courses is the visits of the students to schools for mentally defective children. Half the student's time is actually spent in the schools. Obviously, no short course can give the students opportunities of acquiring skill in the class management of defective children, but they can observe the methods of the teachers, the arrangements of the schools, and also have talks with individual children. To arrange for these visits the course must be held during the school term and in a place where there are a sufficient number of schools available. The arrangements made by the Principal of Bedford College were much appreciated both by the directors of the course and the students.

The course falls into four parts—(1) Lectures, medical, psychological, and pedagogical; (2) demonstrations and practical instruction and classes in manual work; (3) Physical exercises, singing, games, and dances suitable for defectives; (4) visits for observation purposes to schools and institutions for defective children and adults.

I. Lectures.

Many lectures were taken by all the students, but students with many years' experience in special schools, and who had attended last year's course, attended advanced lectures, whilst students with little or no experience of defective children had special talks and instruction. The following extracts from the syllabus indicate the scope of the lectures:—

Medical (Twelve Lectures).

By James Kerr, M.A., M.D.: Introductory: Historical review of treatment of mentally defective children. Speech among the mentally defective.

By Frank C. Shrubbsall, M.D., F.R.C.P.: Evolution of mind, biological aspects, nervous mechanism of perception and ideation. Morbid conditions interfering with mental development. Evolution of mind, social aspects, development of control, and problems of moral defect.

By Letitia Fairfield, M.D., D.P.H.: Classifications, definitions,

standards, spurious mental defects, and physical associations of mental defect, school treatment of the mentally defective, social treatment of the mentally defective.

By George E. Shuttleworth, B.A., M.D., &c.: Séguin and physiological education.

By Miss Mary Bell, M.D.: Venereal disease.

By Major Leonard Darwin: Heredity and mental deficiency.

Psychological (Eleven Lectures).

By Miss L. Brackenbury, M.A. (Associate of Newnham College, Cambridge): A general theory of education applied to the conditions of schools for the mentally defective, the mentality of defective children, results of observation in special schools. Four Seminars. The members of the class contributed to the discussion of the subjects, and gave an account of any experiments which they had conducted:—(a) methods of teaching reading to defective children; (b) the apprehension of number by defective minds, number work, practical arithmetic; (c) the co-ordination of manual occupations in accordance with principles of mental development; (d) the government of a community of defectives.

By Miss E. Waterhouse (Mental and Moral Science Tripos, Cambridge, Higher Froebel Certificate, Lecturer in Education, Homerton College): Response to stimulus; the possibility of education; retention of impressions; memory and formation of habits of thought and action; types of memory, apparent and real defect; imagination and reasoning; the importance of the careful interpretation of these processes in the early stages of development, and in abnormal cases.

By Mr. Cyril Burt, M.A. (Psychologist to the London County Council): Experimental tests for subnormal intelligence, the Bine-Simon tests for general ability and special capacities.

Pedagogical (Nine Lectures).

By Mrs. Burgwin (Superintendent of Special Schools to London County Council): Three lectures on the organization of the London County Council Special Schools.

By Miss James (Supervisor of Mental Defectives and Inspector of Special Schools to the Liverpool Education Committee): Education in Special Schools; the teacher, methods of teaching, discipline, moral teaching; the curriculum, relative importance of subjects, the time-table, sense training; the teaching of reading, writing, number, manual occupations.

By Miss Evelyn Fox (Hon. Secretary to the Central Association for the Care of the Mentally Defective): Defective children and adults in relation to their home life, and their position as members of a normal community; the law relating to the mentally defective; the Mental Deficiency Act, 1913, and the Elementary Education (Defective and Epileptic Children) Acts, 1899 and 1914; after care and visits to defectives in their own homes.

By Miss D. C. S. Whiteley (holder of Mme Osterberg's Certificate, Organized Games Lecturer to the London County Council): Recreative games and exercises (five classes for practical work), Swedish free movements, organized games and singing games, country and Swedish dances.

By Miss Norah March, B.Sc., M.R.San.I.: Sex-hygiene, development of the child, physiological characteristics of childhood, puberty and adolescence, prevention of sex ill-health, supervision and training of children, conditions which may be conspicuous in the subnormal child, prevention and correction of certain forms of abnormal behaviour, social safeguarding of the subnormal child.

II. Manual Work.

The special feature this year was industrial toy-making. With the large number of students and the difficulty of procuring toys and materials, it was not possible for the students to make toys themselves, but they were shown by practical workers the various processes involved in the making of simple toys, both hard and soft, suitable for defective children. Further, during the visit to Darenth they saw the defectives themselves making their wonderful toys which, thanks to the instructor, Mr. Bickmore, are such a feature of that institution. Practical lessons were also given in cardboard modelling and in simple Kindergarten occupations and demonstrations in boot-making, tailoring, and wool making.

III. Physical Exercises.

The classes on physical exercises, singing, games, and dancing, were specially helpful. Miss Whiteley arranged for children attending special schools to give demonstrations, and to many it was a revelation of what these children, with careful teaching, could accomplish.

IV. *Visits to Schools, &c.*

The L.C.C. kindly gave permission to the students attending the course to visit the special schools. The students were divided into groups of six, each group included some teachers of considerable experience, as well as those new to the work; they visited various types of schools, for juniors mixed, for elder boys and girls, &c. Six whole days were spent in the schools, sometimes a school was visited twice. No school had more than six students, the maximum being two to a class. The head teachers were most kind and helpful in showing the students their schools, their methods, and in pointing out some specially interesting children. The extra work thus thrown on the school staff was very considerable, and the Committee would like to record not only their own thanks but those of the students, to the teachers.

Visits were also paid to various homes and institutes by small groups of students, and, owing to the courtesy of the Metropolitan Asylums Board and of Dr. Sherlock, the Medical Superintendent of Darenth, the industrial colony, all the students spent a whole day in that institution. The work there carried on by adult defectives was a revelation to many of the teachers.

The Students.—Seventy-eight students (fifty-four resident) took the course; two men only were, owing to the War conditions, unable to attend; several students who applied late had to be refused. Resident students (paying £5. 5s. fees) were accommodated in Bedford College. All non-resident students (fees £2. 2s.) attended there for lectures. The students were most representative and came from every part of the country—Birmingham, Bradford, Bolton, York, Aberdare, Nottingham, Norwich, Reading, Brighton, Glasgow, &c. In certain places Education Committees paid the fees for their teachers, others only releasing them. The large number of experienced teachers who attended made the course specially interesting, and they were most helpful in talking to the juniors.

The following is an analysis of the students:—Special Schools—head teachers, 18; assistant teachers, 26. Elementary Schools—assistant teachers, 13. Institutions—head teachers, 8; assistant teachers, 6. Other workers, 7. Total, 78.

All the lecturers, and every one who came to the college, commented on the keenness and eagerness of the teachers, and on the enthusiasm for the work. From the number of teachers who attended, both this year and last, there seems to be no doubt that these courses do meet a very definite need. Apart from the lectures, the opportunities of seeing other schools and of meeting fellow workers, is keenly appreciated by the teachers, who lead a rather isolated life.

The summer school has again been recognized by the Board of Education.

The Education Committee of the C.A.M.D. hope to continue these courses, and they are considering various modifications which will enable a larger number of teachers to make use of them.

LONDON.—WESTFIELD COLLEGE.

THE FROEBEL SOCIETY SUMMER SCHOOL,

AUGUST 2—23.

The Annual Summer School of the Froebel Society was held at Westfield College, Hampstead, from August 2 to August 23. The Lady Superintendent was Miss L. James, and the list of lecturers included the names of Miss Maynard, late Principal of Westfield College, Prof. Foster Watson, Miss Berryman, Miss Clark, Miss Salt, Miss Cole, Miss Welch, Miss Lulham, Miss Henry, Miss Peacock, and Miss Daisy Clark-Koettgen.

The students were drawn from various parts of the country and exceeded seventy in number. The majority were teachers in Kindergarten departments of High Schools, and their purpose in attending the school was to gain some knowledge of the more recent developments of junior teaching practice. In addition to the courses on technical subjects

there was one on Leaders in Education delivered by Prof. Foster Watson. A student sends us the following impressions:—

For country students it would be very difficult to find a more delightful neighbourhood than Westfield College—close to the beautiful heath, quiet and secluded, and yet within easy reach of any part of London. The grounds of the College are so charming that tired people could rest in them with great content, desiring to go no further afield. The school was opened in the happiest possible way by Miss Maynard, the late Mistress of Westfield College, whose opening address was an inspiration. She soon laid aside her formal notes and spoke out of her experience as a loving elder who would warn us of pitfalls and difficulties, exhort to effort, courage, and perseverance, paint the reward that comes to those who strive to make themselves worthy of their high calling to teach the new generation. As her beautiful address ended, and we feared it might have been rather a strain for her, we remembered her work for the world was only just beginning, for “examples of rare intelligence, yet more rarely cultivated, are not lights kindled for a moment—they live on here in their good deeds and in their venerated memories.”

The school, too, was much to be congratulated on having Miss L. James for its Lady Superintendent, for no one knows better than she how to combine the qualities of a charming hostess with those of a responsible Head. A visitor coming to Westfield College during the first weeks of August felt the load of bereavement and war weariness lifted for a time by the spirit of happiness and gaiety. Hope and high endeavour for the future chased away, in most cases, the horrors of the past two years. There were no dull jills; all were happy at work and play.

The subjects offered for study were: Leaders in Education, Modern Methods as applied to History and to Stories and Story-Telling, Chalk- and Brush-Drawing, Handwork (including Primitive Industries, Weaving, Spinning, Leather Work, Toy-making), Housecraft, Games and Country Dances, Dalcroze Rhythmic Gymnastics. It was not allowed to take all these subjects, and students were strongly recommended to keep to the courses they chose for the whole of the three weeks. Miss James set her face against cram or overwork; Tuesday and Thursday afternoons, as well as the whole of Saturday, were quite free.

It is impossible in a short space to mention at all fully the work done in each section. I myself had the privilege of attending two of the courses, but I heard and saw enough of the others to be sure that it was a loss not to hear them all. But of Miss Berryman's History I can speak from first-hand knowledge. At her first lecture we were all shown some of the possibilities for history teaching, and we were made aware of the meagre nature of our own knowledge of the subject; but so sympathetically did Miss Berryman deal with us that before the end everyone felt they had ideas to work out, new hints to follow, and that from the heights to which we had been taken it was possible to see not only vast tracts to explore, but sign-posts and roads and byways and many pleasant places which it would be possible to visit with the children. Best of all, her audience was inspired with the wonder of man's history on this earth, and saw clearly that each nation as well as each individual is but a link in a wondrous chain, and that progress, in spite of all the failure and sets back to civilization, is the law that can be traced in the history of mankind.

I listened also to Miss Elizabeth Clark's lectures on story-telling, and was instructed as well as entertained. All young teachers must have felt that she was giving them stores for future use; for she gave us from her own stores stories for fun, stories for lessons, stories for history and geography, stories for fancy and imagination, stories to show that children were the same all the world over. She showed us how to tell the great world stories from the Bible without falling into the dangers of unreality or over-familiarity.

It was a great loss to me not to hear Prof. Watson's lectures on “Teachers of Education,” for he, like Miss Berryman, opened out new fields for delightful study, and

enriched his hearers by giving them wider thoughts about education.

The chalk- and brush-work of the Handwork, under the guidance of Miss Welch, Miss Salt, and Miss Cole, were very helpful. These ladies are known to a very large number of teachers not only for their excellent courses of instruction in handwork, but for their unwearied kindness and patience with young teachers and their difficulties.

The Nature Study under Miss Lulham was a delight, and once again this summer the students were led to see for themselves that "Nature is always true, always severe; she is always right, and the errors and faults are always those of man—him who is incapable of appreciating her she despises, and only to the apt, the pure, and the true does she resign herself and reveal her secrets."

The Housecraft course was a novelty; that and the Dancing have already been written about and illustrated in the daily press.

I had the pleasure of dining once at Westfield College during the school course, and was very well satisfied that creature comforts had not been forgotten, and the merry dancing and games that followed convinced me that all the teachers present were human in the highest sense, for a poet has said, "The plays of children often have very deep meaning, for, to speak plainly and concisely, man plays only where he is a human being in the fullest sense of the word, and he has reached full humanity only when he plays."

OXFORD.

VACATION TERM OF BIBLICAL STUDY, JULY 29 TO AUGUST 12.

The Vacation Term of Biblical Study, which was held at Oxford this year from July 29 to August 12, was a very successful gathering. Though the term was a week shorter than usual, the numbers were good and the students thoroughly enthusiastic about their work. They included a good many teachers, of whom a satisfactorily large proportion were head mistresses; but there was amongst them a sufficient number of members engaged in work of other kinds to keep the gathering from assuming a too exclusively scholastic character, and to enable women of different occupations to exchange ideas and to get into touch with one another. The conditions, too, were ideal. The weather was glorious, and some seventy of the students were housed in the fine new buildings of S. Hugh's College which stand in an old and shady garden; whilst many more in lodgings near by were, by the kindness of Miss Jourdain, able to take their meals in college and share in the life. The lectures also were given in the college library, so that the life of the term was focused at one point.

The key-note of the plan underlying the course of study was struck by the Bishop of Oxford in his address on the Priesthood of Christ, delivered at the University Church on the first Sunday of the term—and the ideas of priesthood and of prayer lay at the centre of the fortnight's work. In the first week Canon Box gave an account of the more recent theories concerning the authorship, date, and contents of the books of Ezra and Nehemiah, concluding that Ezra the priest should really be placed after Nehemiah the pious layman, and not before him in the history. Dr. Oesterley dealt with Prayer in the Jewish Church, showing the ideas which have underlain Jewish prayer from early times to the present day, and dealing at length with the Jewish forms of prayer, about which most people know so little and which have so great a bearing on Christian liturgical forms.

In the second week Dr. Darwell Stone delivered a most useful and inspiring course on the Theology of the Priestly Portions of the Hexateuch and of the Books of Chronicles—showing what was the conception of God and of His relations with His people which the writer of P and the Chronicles had in mind and the place of this conception in the scheme of revelation and its relation to the Christian idea. We have grown so accustomed to assuming that P and Chronicles are legalist dry bones that it was almost a shock to find them so full of life.

Prebendary Parsons, in the same week, dealt with the Epistle to the Hebrews in a way very helpful to his hearers. Dr. Sanday gave two delightful lectures on "Babylonian Religion"; Mr. C. C. J. Webb a most interesting single lecture on "The Permanent Meaning of Propitiation." Miss Jourdain read a wonderfully lucid sketch of "The Religious Philosophy of Pascal," and Dr. Selbie contributed a lecture dealing with "The Prophets of the Restored Community," which brought out very clearly their relation to the non-prophetic writings of the period. Hebrew readings were held on Zechariah, Haggai, and Malachi, and Greek and English ones on the Epistle to the Hebrews; and each course of lectures was followed by a conversation class.

The Vacation Term is no mere Summer Meeting, but a serious course of study meant to appeal to teachers and others who are interested in Biblical study. It is satisfactory to find that it is so well attended even during War-time, and it is to be hoped that the fact that lectures of this kind are available in the holidays, and are so largely attended by teachers, will do something to improve the teaching of Scripture in secondary and other schools, which, as we have been hearing on all sides lately, seems so often to lag behind that of other subjects.

CONFERENCE ON NEW IDEALS IN EDUCATION, JULY 29 TO AUGUST 5.

Il fait avec ampleur sur geste de semez et ignore absolument ce que devient la graine.

In the summer of 1914, just before the War, there met together at East Runton, by Mr. Bertram Hawker's invitation, and under the auspices of the Montessori Committee in England, a number of people interested in the Montessori method. In the course of discussion, however, they found themselves so far outstepping the comparatively narrow field of applied Montessorism that the Committee decided to adopt the vague name it at present bears as more suggestive of its aim to welcome and examine every kind of Educational experiment. In 1915 the Conference, already numbering 250 members, met at Stratford-on-Avon. The third Conference, recently held in Oxford, showed an increase in membership of 100.

It would be hard to imagine a pleasanter setting. The Master and Fellows of University College very generously lent their hall for the meetings and opened the 'Fellows' Garden to the members. Time and place conspired with a singularly happy choice of lecturers to make the week a delightful experience to all who took part in it. It is not proposed here to give more than a general impression of the Conference. The papers will shortly be published in full by the Committee and may be obtained at a small cost.

The Committee are to be congratulated on the variety and contrast in the fare they provided; and not the less if we suppose that accident co-operated with design in their selection, as in Nature's happier products. Among the speakers were men of such widely different activities as Sir Robert Baden-Powell, Prof. Fleure, Prof. Geddes, Principal Jacks, Dr. Macan, Sir Henry Miers, Dr. Michael Sadler, and Mr. Henry Wilson, to quote only a few well known names. Religious education, handicrafts, scouting, regional studies, science teaching, examinations, physiological education, the open-air school, self-organized schools, Universities and their re-planning (this last a most brilliant sketch by Prof. Geddes, of University Genealogy, and its application to the Hindu University at Benares), are among the subjects on the Conference program.

Not only were theory and practice illustrated in directly associated papers, as in those of Mr. Wilson and Mr. Cooke, but one paper would throw light upon a previous one with which it had no very apparent connexion. Thus, when Mr. Arrowsmith prefaced his enthralling account of the transformation of Mixenden School, with a sketch of its geographical background, every one must have felt that new light had been thrown on the practical bearing of regional studies and human surveys outlined in a previous lecture by Prof. Fleure. Or,

again, we had the contrast of a revolutionary and conservative temperament when Mr. Arrowsmith, who had just flung down his fiery challenge to the established order, in his account of an experiment as significant in its way as that of Mr. Homer Lane at the Little Commonwealth, was followed immediately by Miss Price, appreciative of inspectors, tolerant of examinations, who recorded her experiment in independent study in a girls' elementary school, involving a scarcely perceptible modification of the regular curriculum, though containing a seed of revolution which in other soil might prove as transforming as that of Mixenden.

Handicraft, which played a significant part in almost every discussion, found its crowning justification perhaps in a phrase of Mr. Arrowsmith. An idiot hand—that is, a hand untrained to do—is a more flagrant denial of God than all the utterances of atheism.

To dwell for a moment on a few main aspects of the Conference: no one could fail to be struck by the remarkable ferment at present stirring in the educational world. Education, like every other activity of our national life, is in the melting-pot, and an increasingly large number of those responsible for its re-shaping—we do not mean the legislators, but emphatically those who have to deal with the young—whether they be vice-chancellors of Universities, lieutenant-generals, professors, inspectors, secondary-school teachers, trainers of teachers, or members of that immense body of elementary-school teachers, are resolved that the system which comes out of the furnace shall be very different from that which went in. From every paper and from every discussion emerged the conception of the child as an individual to be developed, and as a corollary to this the idea of a partnership between teacher and pupil, the recognition that the mind of the child, to use Principal Jacks' phrase, produces a commentary on the text of the teacher which long survives the text; the determination of every teacher that the indictment quoted at the head of this article should not be true of him; the realization of the importance, greater than all instruction, of "*ce grand enseignement qui est l'esprit de la société où l'on vit.*"

STRATFORD-UPON-AVON.

CONFERENCE OF TEACHERS OF ENGLISH, AUGUST 7-12.

Looking back on that crowded week at Stratford, one realizes that the dominant impression was gratitude for the happy inspiration that chose Stratford as the meeting-place for a Conference of Teachers of English.

The little town is an ideal one for such a purpose; there is many a shrine to which you may resort, in the intervals between lectures and plays, to gather food for thought and quickening of impulses, "staled by repetition," under the influence of that most potent of instructors—suggestion.

For the Conference itself, it was pure joy to sit in Shakespeare's schoolroom and to feel his presence brooding over the place. The hours passed quickly as we listened to one able exponent after another of the art of teaching English; and, if the theme lagged, which it rarely did, it was pleasant to wander off into speculations as to what the boy Shakespeare had thought, sitting in his corner by the window—a window seat one felt sure he would have contrived to secure, those three hundred years ago.

One could picture the quiet boy leaning over his decently conned lesson, to which he had devoted just enough time, one fancied, to avoid collisions with the master, and no more, keenly alive to all the humours of the day, prompting a stumbling schoolfellow, disarming the master's wrath with a merry quip, storing that receptive brain of his with impressions for our future delight.

Then, as one idly dreamed on, he became a listener to our twentieth-century views on schools and scholars, and it was absorbing to watch the varying phases of expression flit over that mobile face as one speaker after another rose to deliver his or her views.

One caught a satiric gleam in his eye as one enthusiast laid

down the law on a difficult passage in one of his plays, whilst the chairman uneasily shuffled his feet in obvious disagreement, a kindly, amused twinkle as the question was gravely mooted of his plays as desirable subject-matter for infants! His head was bent forward in courteous interest when a member, in a delightful paper, showed us how we could set our children's feet travelling towards "realms of old," and persuade them to leave the primrose path of dalliance for a climb up the hill "Difficulty," there to gain a view of wider and wider horizons beyond, and so, for as long as time shall last for them, to enter into possession of that land of imagination and books which affords such a sure refuge from the narrow range of experience within which, for most of us, life must be lived.

Then his face would fade and we would come back to reality to hear some one voicing the rueful fact that the schoolmaster and schoolmarm are not, and never were, popular members of society—Shakespeare himself did not like us, there was no denying that damning fact!

In the clearer light and heightened perspective of that week of conference the reason seemed not far to seek. "The fault, dear Brutus, lies not with our stars, but with ourselves, that we are loveless things," with apologies to our kindly ghost.

We children of a larger growth, shut up for the best part of the year in our classrooms with our pupils, are apt to dwindle somewhat to their stature.

Certainly in the self-revealing of discussion we displayed many of our children's faults; the inconsequence we so strongly repress in them we freely indulged in ourselves, and wandered in the most barefaced manner from the subject in hand; this, however, was no great matter, but when we took to criticizing one another's speech instead of speeches, and comparing our schools with others to the latter's detriment, one felt uncomfortably that there was something "rotten in the state of Denmark" and that we do not all escape the warping that is the particular danger of our life of pigmy giants among pigmies.

The majority of us committed the cowardly sins of omission, and, with our courage oozing from our toes, sat silent, obeying somewhat too literally Polonius' behest "Give every man thine ear, but few thy tongue."

"Comparisons are odorous," as Mrs. Malaprop had reminded us a night or so before; still sometimes they are allowable, and one of the pleasures of the Conference was the opportunity it afforded one of comparing the point of view of the schoolmaster with that of the schoolmistress, a comparison from which one derived the impression that, if the boy were left to work too much unaided, the girl might be the better for a little wholesome neglect.

There was rather a curious tendency to compare the elementary-school child with the secondary-school one, as if there were some inherent difference of character between them, whereas surely it is only a question of the furnishing of their minds, one may say; the elementary-school child precociously familiar with the comedy of human life, a stranger more or less to the cycle of ideas derived from books, the secondary-school child carefully screened from a knowledge of the facts of life, but inheriting from its parents more points of contact with the world in general.

Of course we discussed examinations, and listened to a very helpful paper from one who was introduced to us as the "arch fiend of examiners." He described what would be an ideal examination paper if set by an ideal examiner; the proviso stands for much—an examiner with the destructive turn of mind can, as we all know to our cost, shatter the best-laid plans of wiser men. Some of us had hoped for a systematic survey of examinations as they are and have to be wrestled with, from that for the free place or the County Scholarship to the University Entrance or the Leaving Certificate; but, after all, it was a glorious week in August, and most of us had locked that particular skeleton in the cupboard the week before with the blessed consciousness that we should not hear the rattling of its bones for a brief while—and, lulled by the pleasant belief that our best pupils must have passed (exami-

nation results for the most part being yet unpublished), our feelings towards examiners were not acute.

The most delightful hours of that delightful week, however, were those we spent in listening to the present-day makers of literature; when we sat in the theatre and heard Mr. John Drinkwater denounce the theatre of to-day, with an enthusiastic pessimism—no other adjective will describe it—which filled one with hope for the future, nothing surely could be moribund about which anyone could feel so intensely; or when we sat grouped on the lawn of an old Jacobean garden whilst he read his poems to us.

Even more delightful was the hour when we sat spellbound as Mr. Walter de la Mare discoursed to us on Truth in Fiction, weaving for us new and pregnant thoughts about such old favourites as *Pilgrim's Progress*, *Pride and Prejudice*, and *The Return of the Native*.

Well, it was all very enjoyable, and when, like *Oliver Twist*, we would fain have clamoured for more, we were asked to choose that more for next year, and left Stratford with promises of good things to come—more talks from writers of to-day, representations of Elizabethan drama other than Shakespeare, pleasant prospects with which to beguile many a tedious hour of winter and of work.

WOODBROOKE SUMMER SCHOOL, AUGUST 5 TO 14.

Progress in History.

The Woodbrooke Summer School, which was organized by Mr. F. S. Marvin last year, when the course dealt with the Unity of Western Civilization, was repeated in August 1916. This year the subject was "Progress in History." About a hundred and fifty students assembled, of whom some were teachers in elementary or secondary schools, some were members of adult schools, and there was a sprinkling of members of city councils, and labour leaders, who added much life and vigour to the discussions. As last year, Mr. Marvin had got together a group of eminent scholars, who joined in the discussions, and in the informal talks on the lawns or in the dining hall. Not the least valuable was an eager discussion on future developments in education, which took place under the shade of a tree in the grounds, when one speaker ventured to assert that the chief hindrance to intellectual interests among the "workers" was not "chill penury," but the "warm pub."—a remark for which he was severely and perhaps deservedly castigated.

In Mr. Marvin's introductory lecture on the "Idea of Progress," he claimed Lucretius as the first to realize the idea of progress, though it was not until after the Renaissance that the word was used in its full sense. The growth of science, and the prospects this opened, gave the word and the idea their modern context towards the end of the eighteenth century. Tuyot affirms the total mass of human races marches continually though slowly to ever increasing perfection. There are discords between nationalism and internationalism, between capital and labour, between materialism and the life of the spirit, which must be harmonized. Man must fight for any advance worth having, and a review of history gives us encouragement. There has been progress in the length of man's life, in his strength, in his general happiness. We need not fear, for instance, to compare our age with the Elizabethan as to cruelty, duplicity, purity. There has been progress in unity—the world is closer united. As to the future, we must be clear as to the line of advance and put our effort into it, having as our ideal humanity, the greater whole of which we are a part. In the discussion which followed, Sir Oliver Lodge pointed out that humanity was better than social conditions allowed it to be. Children arrive here better than they leave. The conditions of life spoil life. The dreary mean streets and the total environment bring out many vices and sin. Man has the power of helping or hindering progress.

The Middle Ages were not fixed and unprogressive; they were not a period of "Gothic night." Dr. Carlyle, in his account of Progress in the Middle Ages, gave us an entertaining picture of what they were not—a world of crockets and

battlements and dungeons all in ruins; a world in which nothing was understood; where men spent their time in saying their prayers, in making reverent love to their ladies, in carving the heads of the infidel; where knights squeezed tin pots upon their heads, and wandered about in uncomfortable chain-armour. The tenth to the thirteenth centuries were times of great development in European civilization. There was deeper spiritual appreciation of life; the foundations of social order were laid anew; Justice was recognized as the great principle, with law as the method. John of Salisbury, in the twelfth century, defined the King's government as according to law, the tyrant's as outside the law. To the Middle Ages we owe the organization of the administrative system—a Civil Service "to escape from accidental occurrence of great administrative genius." Men came together in Universities in Bologna, in Paris, in Oxford, drawn by the passion for knowledge. The method of teaching instituted by Abelard was no slavish adherence to the authority of any one author. You drew from various authors what was to be said on one side, from other authors what was to be said on the other side, and you drew your own conclusions. It was a rough world, but they knew something of beauty; they had not, indeed, the art of Greece, but their sense of colour we may see in their manuscripts, their constructive genius in their cathedrals.

Mr. Zimmern found much that was good to say of English government in his lectures on "Progress in Government" and "Progress in Industry." If we are not brilliant, nor far-sighted, nor gifted with over-much constructive imagination, still the world has profited much from our instinct for the next step, from our clear-headed practical statesmen, from our eye for character. See what experiments and political inventions are contained in England's history: Trial by Jury, Representative Government, Habeas Corpus, Ministerial Responsibility, Religious Toleration. The special contribution of England to progress in government is the combination of moral purpose and practical skill. In the course of his discussion of improvements in the conditions under which work is done, Mr. Zimmern laid much stress on the need of money for books by the teacher. The teacher must be able to buy and own his books. A good workman is inseparable from his tools, and the teacher who loves his work wants to have his tools always at hand.

Other aspects of progress were dealt with by Miss I. Melian Stawell ("Progress and Hellenism"), Dr. Jacks ("Progress and Morality"), both eloquent and inspiring addresses of which no summary could give an adequate impression, and Dr. Marett sent a competent substitute to read his account of "Progress in Prehistoric Times."

Mr. Clutton Brock, in discussing "Progress in Art," while recognizing that there had been a great decline in Art, affirmed that we are at least aware of our decadence, while in former periods of decadence men were not aware of it. There is hope for us in our growing efforts to exercise the human will on art. The men of the Renaissance, glorying in their enlightenment, scorned the barbarous ages that had preceded them. Yet it was the thirteenth century that saw the creation of the glorious Gothic cathedrals. Gothic, indeed, was used once much as our *Boche* is used to-day. Snobbery is a frequent source of bad art. The beautiful old cottage gardens had to give way to ribbon-borders because these were a sign of social superiority. They showed the possession of a frame. The piano, when a sign of social status, produces much bad music, and Mr. Clutton Brock looks on the gramophone as a particularly devilish weapon. It should be enjoyed only as toothache is enjoyed. "This barrel-organ down a tunnel, this satanic wheeze"—once people learn to enjoy things quite simply, instead of trying to enjoy symbols of their social superiority, they'll break their gramophones, their ribbon-borders, and much else. However, we are largely aware of the naughtiness of our own hearts, and, complacency being the essence of decadence, there is hope for us in our will to improve.

A very notable figure among the lecturers was Baron von Hugel, who contributed as much to the instruction of those

(Continued on page 622.)

HISTORY'S BACKGROUND.

By J. S. TOWNSEND and T. FRANKLIN. With Maps. Book I. Now ready. 1s. 6d. net.

Eurasia. Correlated with History from Earliest Times to end of Fifteenth Century.

Contents: Part I.—Great Reservoirs of Life. Part II.—Ancient River Civilizations. Part III.—Inland Sea Civilizations. Part IV.—The Beginnings of Modern Europe.

MACMILLAN & CO., Ltd., St. Martin's Street, LONDON, W.C.

How to Summarise, Expand, or Recast Extracts in Prose and Verse. By J. C. NESFIELD, M.A., Author of "English Grammar, Past and Present," &c. 2s. Key, 2s. 6d. net.

THE SATURDAY REVIEW.—"Long known to us as a sound grammarian, Mr. Nesfield has done a very useful work in publishing this little book. It is a contribution towards that lucidity of statement which is often wanting in English writing."

Macmillan's New Senior Class Readers. With Illustrations. Book I for Class IV, 1s. 4d. Book II for Class V, 1s. 6d. Book III for Class VI, 1s. 6d. Book IV for Class VII, 1s. 6d.

THE SCOTTISH CLASS TEACHER.—"They seem workmanlike in every respect—clear, large type, refreshingly novel extracts from modern standard works, well-chosen illustrations, interesting and useful questionnaires and exercises. The series deserves praise."

Realms of Melody. An Anthology. Edited by GEOFFREY CALLENDER, M.A., F.R.H.S., Head of the History and English Department, Royal Naval College, Osborne. 3s. 6d. net.

The Progress to History. A New Series of Historical Reading Books arranged on a Graduated Overlapping System, which begins with the legend based upon history, and leads the Pupil nearer and nearer to his own time. Illustrated in Colour and Black and White entirely from Contemporary Sources. Edited by RICHARD WILSON, D.Litt.

STAGE I, 1s. STAGE II, 1s. 2d. STAGE III, 1s. 4d. STAGE IV, 1s. 6d. STAGE V, 1s. 9d. STAGE VI, 2s.

THE LONDON TEACHER.—"This is a remarkable series of history reading books upon which the publishers and Dr. Richard Wilson are to be congratulated. It may prove to be the set for which teachers have so long been looking."

Macmillan's Geographical Exercise Books. With Questions by B. C. WALLIS, B.Sc., F.R.G.S. Sewed. I.—THE BRITISH ISLES. II.—EUROPE. III.—THE BRITISH EMPIRE. IV.—THE AMERICAS. V.—ASIA AND AUSTRALASIA. 7d. net each. Keys, 2s. 6d. net each.

EDUCATION.—"This series of exercise books supplies the very thing the busy teacher needs. The notes and maps are excellent."

FEBRUARY—JUNE PAPERS JUST PUBLISHED.

Mathematical Papers for Admission into the Royal Military Academy and the Royal Military College, February—June, 1916. Edited by R. M. MILNE, M.A., Assistant Master, Royal Naval College, Dartmouth, &c. Sewed. 1s. net.

A Manual of Practical Physics. By H. E. HADLEY, B.Sc., A.R.C.Sc. Illustrated. 3s.

THE SCHOOLMASTER.—"The help to be derived from such a textbook is incalculable. To the lonely student it will come as a boon. Its exercises are workmanlike and searching, and its 265 pages are cheap at the price."

A Textbook of Practical Physics. By H. S. ALLEN, M.A., D.Sc., and H. MOORE, A.R.C.Sc., B.Sc. 8s. 6d. net. Also Part I.—PROPERTIES OF MATTER, 8s. net. Parts II, III, and IV.—SOUND, LIGHT, AND HEAT, 3s. net. PARTS V and VI.—MAGNETISM AND ELECTRICITY, 3s. net.

THE ELECTRICIAN.—"To those interested in the elucidation of elementary physical principles the book will be exceedingly useful, and praise is due to the authors for producing so readable a book."

PART II. JUST PUBLISHED.

Practical Mathematics for Technical Students.

Part II. By T. S. USHERWOOD, B.Sc., Wh.Ex., A.M.I.Mech.E., and C. J. A. TRIMBLE, B.A. 7s. 6d.

Previously published: Part I, 3s. 6d.

THE TIMES EDUCATIONAL SUPPLEMENT.—"In this elaborate work the subject is developed and extended for the use of students of engineering and other branches of applied science. . . . The book is lucid and useful."

present by his delightful reminiscences of popes and other potentates as by his profoundly learned lecture on "Progress in Religion." And, perhaps, Prof. J. A. Smith in his two lectures on "Progress in Philosophy," and the final lecture of the course on "Progress as an Ideal of Action," contributed as much as Mr. Marvin in buoying up our flagging faith in these days of doubt and distress.

It hardly needed the enthusiastic meeting on the final Sunday to affirm the desirability of continuing the course next year. It seemed to be generally felt that a meeting in the North of England would be advisable, and a small committee was formed to make arrangements. The lectures will form the subject of a book, "Progress in History," to be published by the Oxford Press, and which will doubtless be a worthy companion volume to the "Unity of Western Civilization," which appeared last year.

Concluding Note.

The great success of the second year's summer school at Woodbrooke, and the unanimous feeling that in some form it should be continued, make it necessary to consider the conditions of a successful continuance and the purpose it might serve if developed as it has begun.

Apart from the excellence of the local organization, and the eminence of many of the lecturers, the chief value was doubtless due to having one large subject, of both theoretical and practical interest, discussed in a free and friendly way by people of different mental outlook, living for a time together. The religious spirit and common life of the place contributed largely to the result. One of the outside chairmen who came this year remarked that he thought it was the only popular school of philosophy we had got in England. If this is in any degree true, it is certainly worth doing a good deal to continue and extend and improve it.

To do this it is essential to keep as the main features those things which have ensured success in the past.

1. There should be a social and religious spirit in the school. Such we have gained from living together in a place like Woodbrooke. As one critic has said, it was the "college" spirit about the course, even more than the "University" spirit, which meant so much. If a change of meeting-place is attempted, Woodbrooke should still be regarded as the home, and any place selected as an alternative should have the same possibilities of common life and constant intercourse and discussion.

2. The main lines of study should be large subjects of general human interest, such as we have hitherto attempted, which might be included under the heading of "Progress in Unity." Of such topics there is, of course, an inexhaustible supply. The history of freedom, recent progress in European thought, nationality and humanity, religion and its relation to social progress. The relations of advanced to backward peoples, education and social unity, East and West, occur to one at once, and, as far as possible, subjects should be chosen which have some special interest in the near future.

3. For myself, I should like to include from time to time some piece of more exact thinking treated historically—the outlines of some branch of science or philosophy in its historical evolution. In this way, better than any other, one would gain an idea of the true unity of human thought. And some music, including some folk-songs taught by an expert, would be an admirable addition and strengthen the social spirit.

4. It has been thought that for next year fresh ground might be broken by choosing some centre further north. A public school or training college, preferably in the country and with pleasant surroundings, would be an excellent meeting-place, and suggestions on this point would be very welcome.

5. A permanent committee should be appointed, including, beside the Adult School Union and the Workers' Educational Union, some representation of labour.

A popular Summer School in the "humanities," with something of that combination of history and philosophy which an Oxford man connects with "Gréats," would be a splendid ideal to work for, and the success we have already achieved seems to show that it is not unattainable.

All these Publications to be had from LIBRAIRIE LAROUSSE, 13-17 rue Montparnasse, PARIS (6^e) and their agents throughout Great Britain. PROSPECTUS ON APPLICATION.

TEACHERS REGISTRATION COUNCIL

REPRESENTATIVE OF THE TEACHING PROFESSION

(Constituted by Order in Council, Feb. 29, 1912.)

—: o :—

OFFICIAL STATEMENT,

Issued by Council.

The Teachers Registration Council constituted by Order in Council of 29th February, 1912, issued the Conditions of Registration in December, 1913, and has now made definite progress towards the establishment of a Register of Teachers. This Register will be maintained by the Council for the purpose of recording the professional qualifications of those engaged in teaching, and the official list of registered teachers, which will be issued regularly, will provide a means of ascertaining the names of those whose credentials have been tested and approved by the Council, a body representing every branch of the teaching profession. In order to avoid hardship it is provided generally that during the first few years admission to the Register may be gained on evidence of satisfactory experience alone, but from the beginning of 1921 onwards the Register will be open only to those who are able to satisfy the Council in regard to their academic and other professional qualifications.

The establishment and maintenance of a Register form, however, only one part of the work which the Council hopes to accomplish. The Register itself is but the beginning of a movement towards the promotion of self-government and self-organization such as will place the work of teaching on a truly professional basis. To this end the Council will take an active part in the development of a considered policy in relation to the preparation of teachers for their work, with the object of rendering it difficult for unqualified persons to engage in teaching. The method of testing the teacher's work, whether by examination of pupils or by official inspection, will also receive attention, and it is to be noted that already it is proposed to give the Registration Council representation on the official advisory body to be instituted in connection with the suggested scheme for the co-ordination of examinations as outlined in Circular 849 of the Board of Education. Matters concerning salaries, pensions, and conditions of work such as are of general interest to all teachers will in due course be considered by the Council, and it is expected that this body will furnish an important means for bringing the views of teachers before the public. It is anticipated also that the Council will be able to organize systematic research into educational problems and so play an important part in the development of a true science of education, taking steps to make public from time to time the practical conclusions to be deduced from the investigations undertaken.

Already the task of compiling a Register has convinced the Council that teachers have a large number of interests in common, and that it is greatly to be desired that the work should acquire a higher status in the eyes of the public. The experience of other professions has shown that the first step to this end is the formation of a Register of qualified members with power to exclude undesirable applicants and to remove from the Register any who are found to have acted in an unbecoming manner. To carry out this policy and to realize the wider possibilities already indicated, it is necessary that the Council should be strengthened by the support of all qualified teachers. A single payment of one guinea is the only demand made upon the individual teacher beyond the small sacrifice of time involved in completing the Form of Application.

The Council is confident that teachers will be prepared to enrol themselves without delay when it is realized that to give support to the Register is a professional obligation imposed by the necessity for taking steps to improve the position of teaching in relation to other forms of national work in order that the interests not only of the teachers themselves, but of their pupils may be properly safeguarded. The interests of the community demand that the instruction of the young shall be undertaken only by those who have shown themselves fit for the work, and the proper test of this fitness is one devised and applied by the recognized representatives of the profession itself.

Application Forms and particulars may be obtained from—

THE SECRETARY,

A PROSPECTUS will be sent on application.

THE
BERGMAN ÖSTERBERG
PHYSICAL TRAINING COLLEGE,
DARTFORD HEATH, KENT.

Trustees:

Sir GEORGE NEWMAN, M.D. (Chairman).
Major WALDORF ASTOR, M.P.
Dr. CHRISTOPHER ADDISON, M.P.
Lord SHAW OF DUNFERMLINE.
The Marchioness of SALISBURY.

Principal:

Miss M. H. MEADE, B.A. (Moral Sciences Tripos).

Vice-Principal:

Miss A. WIKNER (Royal Cent. Inst. of Gymnastics, Stockholm).

The College was opened in 1885, and was the first of its kind in England. Students are prepared to be teachers of Scientific Physical Education on Ling's Swedish System. The Course extends over two years. It includes the study of Anatomy, Physiology, Theory of Education; the Theory and Practice of Gymnastics, Massage and Medical Gymnastics, Dancing and Outdoor Games. Students practise teaching in schools in the neighbourhood. The College stands in its own ground of 15 acres, in a beautiful and healthy locality close to Dartford Heath.

The demand for mistresses of physical training holding the Diploma of this College is at present far in excess of the supply.

The course begins in September. Further particulars may be obtained on application to the SECRETARY.

BERGMAN ÖSTERBERG
UNION OF TRAINED GYMNASIAC TEACHERS.

Scholastic Agents.

MANAGING DIRECTORS:

S. A. TRUMAN. JAMES HEARD, B.A.
(Westminster and Trinity College, Cambridge).

This Agency is under distinguished patronage, including that of the Principals of the majority of our leading Public and Private Schools.

ASSISTANT MISTRESSES.

Messrs. TRUMAN & KNIGHTLEY introduce University and other qualified English and Foreign Mistresses and Teachers of Special Subjects in Secondary, Public, and Private Schools. *No charge is made to Principals, and no charge to candidates unless an appointment be secured through this Agency.*

ASSISTANT MASTERS AND TUTORS.

Messrs. TRUMAN & KNIGHTLEY introduce University and other qualified English and Foreign Masters and Tutors to Schools and Private Families. *No charge is made to Principals, and no charge to candidates unless an appointment be secured through this Agency.*

LADY MATRONS AND HOUSEKEEPERS.

Messrs. TRUMAN & KNIGHTLEY introduce well qualified and experienced Lady Matrons and Housekeepers to Boys' and Girls' Schools. *No charge is made to Principals, and no charge to candidates unless an appointment be secured through this Agency.*

TRANSFER OF SCHOOLS AND PARTNERSHIPS.

Messrs. TRUMAN & KNIGHTLEY undertake all negotiations connected with the Transfer of Schools and Partnerships. All communications are treated in the strictest confidence. *No charge is made to Purchasers, and no charge to Vendors unless a sale or partnership be effected by this Agency.*

Any negotiations entrusted to Messrs. TRUMAN & KNIGHTLEY receive prompt and careful attention, every effort being made to save clients as much time and trouble as possible.

OCCASIONAL NOTES.

A JOINT Board of Scientific Studies has been formed by a number of the leading learned societies to promote the study of science in schools and Universities, and a project for the establishment of a Council for Humanistic Studies is, we understand, fairly under weigh. The British Academy and the Five Associations, whose manifesto in defence of the humanities we published in our September number, are co-operating in the movement. The first business of the Council will be, we suppose, to press the case for humane studies upon the attention of Education Authorities and the public generally, but we hope that it will not be the last. There are other and extensive fields for their activities. The whole subject of humanistic and literary education under twentieth century conditions needs to be thrashed out. Modern studies have been pitchforked into the curriculum in our higgledy-piggledy English fashion without any consideration of their relations either to one another or to the older studies, or of their place in a well-considered scheme of education. The one question, how a liberal education can best be given without Latin and Greek, is an urgent one, and sufficient of itself to justify the existence of the Council. The subjects represented by the Five Associations are all closely correlated, and the place of each in national education, and the conditions of its efficient teaching, need to be considered by the associations in concert. Then there will be the task, which we hope will not be lost sight of, of effecting a concordat with the representatives of science.

IT is sometimes debated how far geography is a humanistic study. The presence of the names representing the Geographical Association amongst the signatories to the manifesto may, we hope, be taken as an indication that that Association regards its subject as one of the humanities, and wishes to see it taught as such. Climate is one borderland. To the teacher of geography as a humane study the facts and results of climate are all important, but the causes of climate are of no importance at all. To the student of the life and history of the peoples of India the monsoons are a fundamental fact, but the causes of the monsoons do not matter in the least. The teacher of geography as a humanistic study may, indeed, touch upon those causes as a subject of great interest, and in order to satisfy the natural desire to trace to their origin phenomena of such great significance; but any such instruction will be subsidiary only, and may be neglected without the main scheme of his teaching being affected. In the same way the humane geographer studies the effect of mountain ranges on the history of nationalities, but he does not want to know what the mountains are made of; the question that interests him most is whether or not they can be easily traversed by armies and traders. In a word, the humane geographer takes the facts of the earth's crust and the earth's atmosphere as he finds them, and investigates their influence on the life of the race; the physical geographer tries to discover the causes of those facts. It is the former study which we believe to be most valuable for boys and girls.

THE manifesto of the Five Associations has, we are informed, received the adhesion of a large number of organizations, including several which represent Natural Science and the teaching profession. One of these is the Association of Public-school Science Masters, a communication from whom has just appeared in the press. They express "their cordial agreement with the principles of education" stated in the manifesto, and their view is that science "should not displace the humanistic studies, but should be complementary to them." No humanist need ask more than this, and no scientist could be content with less. The science masters go on to say that the aim of science is the search for truth based on evidence rather than on authority. If this refers to advanced studies, it is equally true of language, history, and geography; if it refers to school work, the expression "search for truth" seems to us somewhat grandiose: we should prefer to call it the acquirement of knowledge at first hand through the learner's own senses. This is the real *differentia* of school science; but, even so, it must be remembered that in language also the learner is in immediate contact with the objects of knowledge. With the further statement that a knowledge of the facts of Nature assists men to understand how the forces of Nature may be employed for their benefit, and to appreciate the sequence of cause and effect in governing their own lives, every one will agree; but to help us "to see things as they really are, and not to distort them into what we may wish them to be," is surely not the monopoly of scientific studies. But the manifesto, as a whole, is studiously moderate, and should form a good working basis for a talk round a table with the humanists.

SOME light has been thrown by Mr. Bonar Law on the plan of the Government for making a survey of the whole field of education. The survey will be under-

The Committee of Review.

taken by a Sub-Committee of that Reconstruction Committee which will examine the whole question of restoring the normal conditions of national life. The Sub-Committee for education will therefore presumably contain some Ministers, and we may fairly expect that it will include other persons besides. In its terms of reference we are glad to see that the term "reconstruction" is not used. The key-word is "development," and it is development, and not reconstruction, that we want in education. The Sub-Committee will have before it for consideration, amongst other things, the reports of the Committees on Science and Modern Languages. Herein lies a danger to humanistic studies. There is no committee on the humanities, and, though that on modern languages contains a fair proportion of scholars, we must remember that it was appointed in response to a demand for the teaching of the languages as "a business proposition," and we have yet to see what weight it will throw into the humanistic scale. Moreover, there is the last report of the Consultative Committee with its extensive recommendations for scholarships in science. Clearly, there will be a need for a body to state the case for the humanities, and we hope that the new Council for humanistic studies will prove equal to the task.

Head Masters' Manifesto. WE publish elsewhere the manifesto drawn up by a Special Committee of the Head Masters' Association and communicated to the Prime Minister and other public officials. For each of the thirteen articles of faith something may be urged, but there is no attempt to frame a consistent whole, and some appear mutually contradictory. With the demand for compulsory education up to the age of sixteen, and the insistence that evening classes do not meet the need, all educationists will agree. An increase in the salaries and pensions of all teachers to fill the ranks is equally imperative. But on the training of teachers there is not a word. It is recommended that boys shall not be transferred from the elementary to the secondary school after the age of eleven, and every elementary school in the kingdom is to form a list of the promising boys of that age. These boys are to be submitted to an oral and written examination, and the secondary head masters are to have a voice in the selection of free-placers. Such a scheme appears to us Utopian, and the primary head master is likely to protest. The Manifesto passes without warning to a different branch of the subject. Specialization before the age of sixteen is deprecated, and the list of subjects of a general education which includes, "in most cases, French and Latin," will certainly not be accepted by the scientists. Public schools are apparently distinguished from secondary schools, and their entrance scholarships are to be brought into harmony with the non-specialized curriculum. Lastly, "the head master, with his colleagues, should have complete liberty in regard to the external organization and control of the school." We wonder whether the Local Authorities of Leeds and Birmingham will endorse this recommendation.

"THE acquisition of a modern language, however valuable for business, social, or literary purposes, is not necessarily educational." So begins the leading article in *Modern Language Teaching*, for October, and the major premiss seems a harmless negative, but the minor

'Tis we Philologists know.

premiss which follows reveals the purport of the writer, and prepares us for the most extravagant of paradoxes. "To have that quality, knowledge of the language must extend to its development and to its relation with other languages." German, he holds, has been given undeserved prominence, and "for educational purposes the Teutonic languages to be studied are our two sister-tongues, Dutch and Danish." French may survive "by reason of its contributions to our vocabulary," but for educational purposes it must be taught in a different form. The *Lengo d'O* is the basis of Romance philology, and the student, after acquiring the essentials of Provençal in England, will learn how to speak it fluently by passing an Easter holiday in the land of Mistral and Daudet. As a clever *jeu d'esprit*, this article might well have appeared in the *Modern Language Review*, but, as the first article in the official organ of the Association, at a crisis in its constitution, without a word of explanation or warning from the editor, it is, to put it mildly, misleading.

Teachers of Russian. THE teaching of Russian goes steadily forward, and we are constantly hearing of the establishment of classes by Local Authorities. But the point on which we want light is who the teachers are. It would seem to be an elementary rule in a well organized community that no one should be allowed to teach in a public institution who could not give proof of his competence; but we are still a long way from that position in England. The Board of Education has no power of directly preventing the employment of inefficient teachers. They could, no doubt, in the last resort, refuse the grant, but this is an extreme measure which they are not likely to take in any ordinary case. We have a Teachers Registration Council, acting under the authority of an Act of Parliament, but its functions are confined to keeping a list of those teachers who choose to put their names down for that purpose, and the absence of a teacher's name from that list is no proof of professional incompetence. The authorities who appoint teachers of Russian cannot be themselves capable of judging of their qualifications, and probably in many cases find it difficult to get expert advice. Obviously, every professed teacher of the language, or of any foreign language, should be required to produce a certificate of efficiency from a competent authority before being appointed to a public post. The Registration Council ought to be that authority, and it should have an Advisory Committee of Russian scholars and persons with a knowledge of Russia to assist it.

A Loan Fund for Teachers of Russian. FOR some time there will, no doubt, be a need for Russian-born teachers of Russian; but English teachers ought to make up their minds that this period shall be only a short one, and that, before many years are over, the teaching of Russian shall be entirely in the hands of English men and women. We must not have a repetition of the history of the teaching of French and German. "*Securus judicat orbis terrarum*"; the civilized world has decided, with practical unanimity, that in school boys and girls can be successfully taught only by their fellow-countrymen. Now, Russian is a difficult language, the facilities for studying it in England are limited, a period of residence in Russia is essential. Are there no means of assisting young teachers to reside in Russia except waiting for the Government bursaries which may never come? Why should not a Loan Fund be established, from

which loans could be made to teachers who wish to study Russian, to be repaid by them in, say, five years' time? Managed in this way, a sum of a few thousands would go far, whereas, if invested, it would not produce enough to be of much use. Teachers are an honest race, and the loss from failures to repay would probably be small. It would be essential that loans should be made only to teachers of proved competence, essential also that the Fund should be controlled by a committee whose capacity for business would inspire respect. There is more than one society in London carrying on, by means of loans, a large work of training or emigration with a ridiculously small capital.

THE Education Committee of the North Riding of Yorkshire has made a great advance in knowledge. It has discovered that £70 a year is too low a salary for a teacher. It cannot, indeed, claim the credit of having made this remarkable discovery unaided; it needed apparently considerable stimulation by the local Association of Teachers before it was induced to enter upon its investigations. But it is fair to say that, having completed them, it has come to the conclusion that special consideration must be given to those cases, even at the price of an additional £1,800 of annual expenditure. Seventy pounds a year is twenty-seven shillings a week, which, with food at its present price, is equal to about a sovereign in ordinary times. A county which pays its teachers the wages of a carman or a railway porter does not deserve to get teachers, and we do not mind adding that our hope is that in the near future it will fail to get them. Such sweating is as disgraceful as any that can be charged against East End clothiers or Midland chain-makers.

MR. RUNCIMAN, speaking during the debate on food in the House of Commons, was eloquent on the nation's increased capacity for consumption. We have apparently, as a nation, never eaten so much before; the increase in wages has kept pace with the increase in prices; and nothing but the best of everything is good enough for the munition workers. Of the large classes whose salaries are now exactly what they were before the War Mr. Runciman said nothing; he passed by the clerk, the curate, and the teacher as unworthy of notice. Many teachers must be feeling the pressure of high prices severely, and it will be small consolation to them to be told that munition workers are so prosperous that they can buy the best cuts of meat. If the State can pay its shell-makers like this, it ought to have something to spare for those who, in Mr. Pease's phrase, "are holding the lines of communication." The case for a War bonus for at least the poorer teachers is, to put it gently, as clear as that for a War bonus for railway servants, and we hope that the Government will be induced to consider it.

PROF. POLLARD is so well known amongst teachers, and takes such keen interest in their work, that congratulations to him on the brilliant Creighton lecture which he delivered to a crowded audience at University College will not be out of a place in an educational journal. His theme was the "Growth of an Imperial Parliament," and the aim of his address was to show that English institutions have grown, and not been made, that those who are supposed to have fashioned

them were only half conscious of what they were doing, that the soundest policy is not to try to look too far ahead, that a generation cannot legislate for its successors, and that the "dead hand" of the past gripping the present by means of a written constitution may be a great evil. Clearly, there is another side to the question, but with that we are not now concerned. We know something about the "dead hand" in education, and Prof. Pollard might, if he had chosen, have illustrated his theme from the history of schools and Universities. The lecture has been published in *History* (Macmillan), the periodical of the Historical Association.

THE law relating to the whipping of boys for petty offences is singularly eccentric. No boy over fourteen may be birched. You may whip the child of ten, but the sturdy young rogue of fifteen must not be touched. Most schoolmasters would say that it was just the middle period of boyhood to which corporal punishment was most suitable. So thinks a Joint Committee of Liverpool magistrates and members of the Education Committee, which has been considering the subject of juvenile crime and its recent increase in Liverpool by as much as one-third. Another suggestion is that schoolmasters and mistresses should be empowered to inflict punishment on scholars for their misconduct out of school. This is a far-reaching proposal; if carried into effect, it would greatly increase the hold of the teachers over the children, and make the latter feel that good behaviour and decency were just as obligatory on one side of the school wall as on the other. Observe that it is not proposed to go further than to give the teachers powers of discipline; to make them responsible for their charges after school hours would be impossible. We have spoken of disciplinary measures only, because we believe it is that side of the question which is most likely to be neglected. There is another side of which we have been forcibly reminded by Mrs. Humphry Ward, who quotes the statement of a London magistrate that since the establishment of an Evening Play Centre near his Court he had had no more trouble with boys. Undoubtedly every increase in the facilities for honest play will help to diminish hooliganism—a point which the Liverpool Committee has not overlooked; but, provide what amusement you will, there will probably always be a residuum of young ruffians with whom nothing but the stick will have any influence.

IN answer to a request from the Editor, Prof. Ashley has kindly supplied us with the following information:—"It has always been the policy of the Faculty of Commerce in the University of Birmingham to require at least two years' study of a modern language before permitting candidates for the degree of B.Com. to give their attention to its commercial use. In the first year they can be well drilled in the rudiments of the language; in the second they can acquire some little knowledge of its literature. Even from the most utilitarian point of view it is expedient for the young men who represent our commercial interests abroad to know something of the history, the institutions, and the great writers of the countries in which they travel, because their business success will often depend on their power of joining intelligently in general conversation as much as on their business

B.Com.

Prof. Pollard's
Creighton Lecture.

capacity in the narrower sense. It is to be remarked, also, that a student who is thoroughly well grounded to begin with in a language, and can read books in it with tolerable facility, will be able to acquaint himself with the forms of correspondence so quickly in his third year that he will find it possible to give a good deal of time to the study of financial and commercial journals as well as to economic treatises and government reports in that particular language. For men who aim at the higher and more responsible positions in business life, ability to use foreign publications in this way may be even more important than the power to carry on correspondence."

THE School of Oriental Languages, which will occupy the buildings of the old London Institution in Finsbury Circus, is ready to begin work next January.

Meantime, it is appealing for an Endowment Fund of £150,000. It appears that the School needs an income of £14,000 a year, and that of this there is so far assured, including the grants from the Imperial Government and the Government of India, only one-half. We suppose the appeal to private generosity is designed to save the national exchequer £7,000 a year, for it is incredible that even in England such a ship could be wrecked for want of this ha'porth of tar. There are some points in the design of the School which are not well understood by the public. The scope of its activities will be wider than its name indicates, for African languages will be included in the program, and the literature, religions, and customs of native races will be studied as well as their tongues. This is a department of learning in which Englishmen have not hitherto been prominent. Only in rare instances do Indian Civil Servants make a point of studying the life and thought of the people they rule, and this in part accounts for the gulf which still separates the Englishman from the native Indian. But the school is not designed for administrators only—it will have its commercial as well as its imperial side. The immense importance of the Chinese language in the coming struggle for the markets of the East is suggested in the appeal. The Germans, we are told in the document, are taking steps to give a better training to their merchants who go to the East, and we certainly cannot afford to do less than our rivals. There is, indeed, something almost comic between the immensity of the prize, China with its four hundred millions of possible customers, and the paltriness of this missing £7,000 a year. If our business men have any imagination at all, the sum will be subscribed a hundred times over.

A LETTER in the *Spectator*, signed "S.," brings out clearly and forcibly a point that we have often urged. The writer, a public-school man, a graduate of Balliol, confesses that he has forgotten the small Latin and all the Greek that he learnt at school and college. Yet, in the worst days of the War, he found stimulus and consolation in the study of translations such as Jowett's *Plato* and Butcher and Lang's *Homer*, and was able to quote from the *Republic* the best argument against strikes and pseudo-scientific objectors, forgotten by scholars with two Classical Firsts to their account.

WE willingly admit the letter of Miss Barbara Low, challenging an "Occasional Note" in our last number suggesting that in Germany there existed no

German Pacifists.

"saving minority" to protest against the attitude and conduct of the Government, but we cannot enter the plea of ignorance. The passages she quotes were familiar to us, but we are not aware of any manifesto against the obsolete system of government which enables a Minister of Education to impose at will a new history syllabus for schools inspired by racial hatred. We are well aware that the best voices in Germany are gagged, but we fear that Prof. Förster is a solitary voice in the wilderness, and cannot be counted as the representative of a saving minority.

LOCAL AUTHORITIES.

IN the period of reformation with which educational schemes and institutions are threatened, there is "one thing needful." It is this. To define, as precisely as possible, the purpose for which the scheme or institution is established or maintained. If the object is properly defined, the process for achieving it should not be difficult to determine. As a rule, we are concerned chiefly with processes and allow results to look after themselves. Local Authorities are tempted to tinker with the curriculum of secondary schools with the plausible object of providing what is termed a "vocational stimulus." There can be no objection to vocational training under suitable conditions. In nearly every town, a public school that offered a two years' systematic course for boys and girls from fourteen to sixteen years of age, in English, office routine, book-keeping, shorthand, and typewriting, would be welcomed. The sole condition of success would be the ability of the school to produce, as the result of the two years' course, boys and girls competent to serve in offices as shorthand typists. This particular department of educational service is in many places supplied by private enterprise, but it is doubtful whether the conditions under which the instruction is given would be approved by the Board of Education.

Shorthand Typists.

THE vocational subjects of shorthand and typewriting are obviously of little value to the pupil unless they are mastered; and the attainment of mastery is chiefly a matter of practice. For a secondary school to add these subjects to its curriculum ought to imply that it intends to teach them thoroughly, to practise them regularly, and produce pupils competent to serve in offices as shorthand typists. A secondary school may be large enough to do this—to develop, that is, a commercial section, while retaining as its main purpose the provision of a sound general education. If the secondary school is not a large one, and is encouraged to pursue vocational stimulus in this direction, it must sacrifice something of its general aims, without any compensating gain of efficiency. The pupils will "break ground" in typewriting and shorthand, as they are breaking ground in many other subjects, and will not adequately cultivate anything.

The Tincture of Utility.

IT is not improbable that one of the reasons for the encouragement given to subjects of vocational stimulus in secondary schools is to be found in the zeal of certain officials to foster the institutions they are appointed to inspect. They imagine, perhaps, that the demand for ready-made shorthand typists may result in the establishment of junior commercial schools for their production. They foresee that these schools would compete with secondary schools, and their idea is to dilute the academic curriculum with a tincture of utility and forestall opposition. This may or may not be the explanation of what appears to be a short-sighted policy, and a policy which ought to be deprecated. Secondary schools have an important function to perform for boys and girls who require a broad foundation of preparatory education, and they ought not to be diverted from this mission by any tinkering with "vocational stimulus." The single object should be to render the work they are designed to do systematic, thorough, and beyond question. They will then contribute not only to commerce, but to all other employments and industries, an element increasingly required by the nation.

Science and Industry.

IT is asserted by some experts that the facilities available for higher scientific and technical training are deplorably inadequate, and that consequently our system is incapable of producing for industry

anything like a sufficient number of men with high scientific attainments. The assertion may be well founded, but it would be interesting if some Government department could institute an inquiry as to the remuneration offered by employers for men who do possess the scientific qualifications in question. It would not be surprising if it was discovered that the supply is regulated by the relatively extremely low value assigned by employers to the services of highly trained men. In law, medicine, and in the select ranks of the Civil Service, the educational system appears to be competent to produce more than a sufficient number of qualified men to meet requirements, chiefly because the material rewards in those professions are sufficient. It is fair to assume, therefore, that, if in commerce and industry employers are prepared to pay adequately for highly trained intelligence, the supply would soon be available.

LORD HALDANE declared recently that we suffered from want of experts. "It was no use telling manufacturers to employ more chemists; we were not training them. Our training machine was not adequate to produce the supply we required at the moment." This is one side of the picture; here is another. Some time ago a distinguished professor of chemistry was asked whether he could supply three qualified men for a works laboratory situated in a manufacturing district. He was in a position to do so, and inquired what salaries the firm proposed to pay. The manager asked for his views on the subject, and the Professor, having a modest view of the value attached to scientific attainments in a commercial undertaking, suggested £3 a week. The qualified man was not employed.

THE Merthyr Education Committee have passed a resolution that women teachers who marry during the War may be kept on, but that their salaries will be reduced to the minimum of the scale. A mistress at the Merthyr Intermediate School, after ten years' service, was receiving a salary of £150 a year. She announced her intention of getting married, but, as her fiancé was called up for military service, she proposed to continue teaching for the duration of the War. Her salary was immediately reduced to £120 a year, though her work was unaltered.

SCIENCE NOTES.

THE movement for more study of science in the public schools has produced one good result—viz., that it is now generally recognized that all boys should have a period of instruction in chemistry and physics with laboratory work, and that by lecture-demonstrations and reading all boys should have an opportunity of gaining some broad ideas of the larger aspects of scientific achievement. At the annual meeting of the Public-school Science Masters, the principal subject for discussion will be "Science for the Rank and File." As mentioned in our August notes, the meeting will be held at Eton College on January 3 and 4.

AN interesting account of the geology of petroleum was given to the British Association in the presidential address by Prof. W. S. Boulton to Section C. It will probably surprise many to learn that the British Empire produced but little more than 2 per cent. of the world's supply of oil in 1914. The Middle-West of Canada has large areas which promise an increased yield, but we were told that Mexico is the country of greatest future possibilities—"a dozen wells in Mexico, if opened to their full capacity, could almost double the output of the world."

PETROLEUM naturally suggests peat. Geologists and botanists met together to hear about the oldest known peat, that of the old red sandstone in Aberdeenshire, and the interesting fossil *Rhynia gwynnevaughani*. These plants have neither roots nor leaves, consisting of a colony of cylindrical stems about eight inches high. Some stems have lateral branches. Large, cylindrical sporangia, containing numerous spores, were found detached and had doubtless been borne on the leafless aerial stems.

MANY of our readers are considering the best way of developing continued education. A view held by many, including the Workers' Educational Association, is that the whole time of the continuation school

should be given to general education outside the employment. Another view, of which Kirchensteiner was an enthusiastic exponent, is that the best way to interest pupils between fourteen and eighteen is through their utilitarian motive, and to use vocational work as a means towards general education. We all desire more general education; but it must not be forgotten that we have either to revive instruction on the apprenticeship model, or give technical training through trade schools. We call attention to a lucid address by Mr. A. P. Trotter on this subject. It was given recently to the Association of Supervising Electricians, and contains interesting historical references and an occasional hint useful to present-day teachers of trade classes.

It came as a shock to the orthodox, whose belief in the absolute character of Newton's laws of motion and of gravitation was unlimited, when Einstein and Minkowski propounded the revolutionary theory of relativity. Perhaps the simplest way to put the matter is to state that the Newtonian mechanics holds good (except for a minute variation) for bodies moving with velocities not approaching that of light, when mass is no longer independent of velocity. Mercury was known to have an orbit not quite in agreement with planetary theory, its perihelion altering by 43 seconds of arc in a century. Einstein has now calculated the amount of the relativity effects, and finds that it exactly supplies the needed correction. It had already become certain that no intra-Mercurial planet existed, and this work of Einstein removes the last serious discrepancy between theory and observation in the mechanics of the solar system. The difficulty of getting direct evidence is illustrated by the fact that the bending of a ray of light from a star when grazing the sun amounts to less than 2 seconds of arc, and that this is the most direct and strongest illustration of the influence of a gravitational field on light which has been suggested hitherto.

WE are glad that the Education Reform Council has asked that the need for medical women in many parts of the Empire, at home and overseas, should be most seriously considered. More welcome is the extension of the science laboratories of the Royal Free Hospital and the royal recognition accorded by Her Majesty the Queen when she opened the new anatomical department.

THE Civil Service Commission has just published the examiners' reports on the Army Entrance Examinations held at Midsummer. As usual, there is criticism to which teachers may profitably give heed. But we are not altogether in sympathy with the complaint of a science examiner that specific heat was defined as a quantity of heat rather than as a ratio. That great classic, Clerk Maxwell's *Theory of Heat*, states: "The quantity of heat required to raise the unit mass of the substance one degree of temperature is called the specific heat of the substance." Whether this definition or the ratio be preferred, may well be left to the teacher or student; what was good enough for Clerk Maxwell is good enough for an Army candidate. If examiners cavil at statements which are quite sound, merely because they prefer other modes of definition, the injurious result will be that candidates must give their attention to a study of examiners' personal preferences.

IN PRAISE OF LONDON.

By S. P. B. MAIS.

YOU who still remain to carry on the nation's most necessary work in London, do you ever realize the multitudinous blessings which the Mother City has bestowed on you? Man is notoriously ungrateful; but it might make you realize more acutely what you so heedlessly enjoy and take as a matter of course if you were permitted to see for a moment into the hearts of some of us who are temporarily banished from the haven where we would be.

There is a sort of man whose heart is all the time in London, no matter where he goes or what he is doing. In the silence of the desert he hears the throb of the mighty, restless heart of the metropolis; on the tops of gigantic, well-nigh inaccessible peaks in South America he pictures again the light-hearted, gaily-bedecked crowds at lunch in the "Picc." or the Berkeley; in the dead of night in the trenches he looks at his watch and thinks what Londoners are doing at that moment, of the theatres emptying their vast hordes

of seekers after gaiety, of the unending stream of taxis hurrying away to the Savoy or the Carlton, with happy couples intent only on draining the short cup of life and youth and love to the lees.

Have you who read this ever stood at the Oxford Circus Tube Station entrance for the space of say, five minutes, about six or seven o'clock in the evening, and given yourself up to the mere contemplation of the beauty of it all? Try it, and see whether something of the ineffable preciousness of London does not sink into you—you who are so rich in the daily possession of it, and yet are so blind to its infinite charm and variety. For, you may ask, what is there to be seen at such an unromantic place at such an unromantic time? Well, there is the glow of the sun paving all that great street to the west with gold, there is the music of the pattering feet of humanity released from its labours, there are the dainty figures of the alert, healthy, good-featured shop girls (how far prettier London girls are than any others in the world), hustling for 'bus or tube, the myriad types of passers-by of all sorts, virtuous and vicious, aristocratic and gutter-bred, poets, parsons, fishmongers, soldiers, policemen, scavengers, novelists, munition makers, powerful City magnates, all jostling each other on their respective ways home. There is the ever-present sense that you are in the very vortex of the Universe, with all the most famous men of the age within easy telephone call—some of them even brushing past you while you loiter here. Who knows but what this man may be Arnold Bennett, or that Churchill or Belloc or Augustus John, or a prominent V.C. or barrister? The cream of England's brains is contained within a radius of five miles of you; you have a feeling that here, at any rate, you do *live*.

Why, my good Sir, think of yourself at this same hour at Puddleton Magna. What is happening there? Mrs. Harrison is telling the vicar the same story about her "rheumatics" at the Market Cross which she has told him at this selfsame place and hour daily for fifteen years; the cows are ambling past the doctor's gate, as cows from Barton Farm have always ambled past at this hour since the house was built; the village schoolmaster, having corrected his exercises, is just getting over the style leading to Puddleton Minor, in the initial stages of the walk which he has taken every night for thirty years; the village idiot is leaning over the bridge, looking vacantly into the placid waters of the Yeo, as he does all day and every day. The whole place is asleep, stagnant, vicious, rotten—like a piece of wood suffering from dry-rot.

Can you, busy Londoner, imagine what it must be like to be in such a state of mental vacuity that the everyday knock of the postman causes your heart to beat with excitement, not because you are expecting good or bad news, but simply because the postman is your only visitor during the day? Can you imagine yourself stuck down for the best and most virile days of your life in a place where new books are not procurable; where conversation runs eternally on the crop of potatoes and foot and mouth disease; where a smart frock or a pretty face is never to be seen; where the sight of a tramp on the roads fills you with joy, because his face is unknown to you? You Londoners may sentimentalize on the beauties of Nature as seen in our country hedgerows and meadow streams, but have you ever stood on the Embankment on a dark night and watched the flashlights flicker and dart about the sky and the lights of the boats shine through the gloom of the inky waters below you? There is nothing in the country which can compare in sheer loveliness with that. It was Milton, you remember, who called the human face divine, and divine it certainly is; the wild places have nothing to show more fair, more touching, more majestic than the faces that are scattered about in tube train that you may happen to travel home by, any night of the week. All life is depicted for you there in that one compartment—hope, love, joy, despair, energy, murder, passion, jealousy, strife, envyings; there is no end to the romance, clear-writ on the countenances of any average twenty people you may chance to see on the top of a 'bus, in a suburban train, on the platform at Waterloo, in a *queue* outside the pit of Wyndham's Theatre, or at a counter in Selfridge's.

Bacon made one of the supreme errors of his life when he aggressively asserted that a crowd is not company. To the live man who counts all men as his friends, a London crowd is the most friendly thing in the world: it is full of humour and the milk of human kindness; it educes all our sympathetic feelings, all that is most companionable in us; it evokes chivalry, compassion, and unselfishness. After all, what is Life—I mean, the charm of living? Does it not lie in the joy of conflict, of competition, of striving to make the best use of our talents—in a word, as Carlyle would have said, in the grandeur of work? And where else but in London do you get the best opportunity to fulfil your own destiny through working? The streets of London may not, perhaps, be paved with gold; they are paved, in point of fact, with something infinitely finer: they are paved with the footmarks of those who deliberately set out to achieve, of those who search unflinchingly for romance and adventure, of those who are not content to rest at each milestone and count over their gains and repine their losses, but rather, in the zest of battle, go on from struggle to struggle, from glory to glory, doing their utmost—to adopt an illuminating vulgarism, "going all out" all the time.

Do you wish to keep in the van of modern thought? There are lectures by the ablest men of the day on every latest discovery, to be had for nothing, galleries that may be visited, papers and books close at hand, conversations going on all round you whenever you may happen to be. Do you require refecation after labour—amusement, gaiety, frivolity, that will not further tire your jaded brain? Nowhere but in London can you be certain of procuring the best of its kind in this necessary department of life. Do you wish for quiet in order to contemplate and arrange your ideas? You have only to turn out of Piccadilly into St. James's Park, and you will be as lonely as you would be in the middle of Dartmoor. Perhaps tragedy has visited you of late: you try every distraction to lessen, if possible, the pain you are enduring. In the country, there is nothing left for you but to "mope" and wander listlessly by yourself in the dreary, pitiless lanes; in London, there are thousands in like case with you, which in itself halves the suffering, and you can throw yourself whole-heartedly into what alone can assuage mental torture—congenial, all-absorbing work.

All London cries out for men with ideas, men with energy, men filled with a divine mission; it stretches out unmistakable arms of welcome to all such. In the country, they are regarded with suspicion as innovators, dangerous revolutionaries, subversive of the traditions that have stultified all rational growth.

On all sides we are being told that nothing will matter in the future in comparison with education; that the salvation of England will lie in the education we give to the youth of to-day and to-morrow. What education can compare with that which the average Londoner can pick up for himself in the streets of his own city? Every advantage is his: in close contact with his fellows of every creed and in every stage of intellectual growth, surrounded by the finest products in Art of all the ages, in constant touch with the elementary and eternal varieties of death and birth and love—it would be strange indeed if he were not in the best sense of the word educated, broad-minded, sympathetic, able to cope with the myriad problems which perplex poor erring humanity. He is able to study what use dazzling wealth makes of its advantages, what unnecessary horrors poverty brings in its train, how to combat disease and vice, how to ameliorate the whole lot of mankind; he learns to use his brain, not to neglect the legitimate relaxation which the hard worker requires, whether that relaxation lies in dozing in a punt on the river at Hampton Court, laughing at the jokes of George Robey, or walking over the Surrey Hills.

In our Utopia, the English Commonwealth of to-morrow, all ardent, youthful spirits, filled with the divine zest for making good, will flock to town, and leave the slothful, picturesque country-side to such as desire neither fame nor wealth nor the high destiny that awaits a nation's geniuses, to the tired and aged, the listless, the bucolic, the unambitious—the vegetables among men. And lastly, lest mis-

conception should arise owing to a recent unfortunate utterance of one of the greatest of our Bishops, let it not be supposed that this London of ours, this city of dear, dear souls, is a hotbed of vice. There is but little wrong with the morals of the first city in the world; what there is, is all superficial, remediable. With the hamlets and villages, it is, alas! far otherwise; let him and his like visit us and cleanse us from the errors which have crept in during our years of forced indolence, and leave the moiling, toiling Londoner, who has no time for viciousness, in order to preach to us who need him a thousand times more, because we are less easy to alter, far more in need of reformation.

It has become, of late years, rather the fashion to ridicule many of the shrewd sayings of the sanest of ages, the eighteenth century, and its finest product, Doctor Johnson, has earned a quite undeserved neglect at the hands of the young Georgians, but he coined an aphorism on this subject which contains the root of the whole matter. "He who is tired of London is tired of life," he once said, and the saying is literally and absolutely true. All our London geniuses have recognized it: Lamb found more fascination in his native streets than in the Lake country, it was the source of Dickens's inspiration, and has been the canvas for countless themes of all novelists since his day. But none of these men has done justice to the million-sided appeal which London makes to all sorts of temperaments. In London, you have life itself, which is beyond the power of Art to describe; the view as you cross Hammersmith Bridge in the autumn evenings is finer than the most exquisite sonnet or piece of music or picture ever produced; the lights of the underground station at Charing Cross; Kew Gardens in lilac time; barges ponderously moving down past Blackfriars; Covent Garden, with its medley of fruit and publishers and theatrical agents; the peerless symmetry of Regent Street—all possess a fascination which goes nearer to make man happy than all the arts can ever hope to do.

You don't believe me? Go down to Waterloo, and watch the expressions on people's faces as they arrive from the depths of the country, then turn to the departure platform and scan those going away. You will need no further proof. Of all the horrors in life separation from our loved ones is the worst, but there is a separation wellnigh comparable in misery with that, and that is the parting of the Londoner from his home. He buoys himself up with countless magazines, in the hope that he may lose himself in those; but does he read them? No. He keeps his face glued to the window, and repeats over to himself the beloved names of the stations which take him further and further from all he holds most dear—Vauxhall, Clapham Junction, Wimbledon, Malden, Surbiton, Weybridge. By the time he has reached Woking the last flicker of hope vanishes, all traces of London have disappeared, and he is solitary, sick at heart, and filled with a dull resentment at a fate which so conspires to dash away from man's lips the cup that he so cherishes and others, more fortunate, despise.

THE EDUCATION OF TASTE.

A NOTE ON THE ARTS AND CRAFTS EXHIBITION.

THE very existence, in its present form, of the Arts and Crafts Society's Exhibition at the Royal Academy Galleries is a remarkable witness to the energy and good will of all who have laboured to design and erect it. For it is no mere museum exhibit of handicrafts. It has built and decorated itself into Burlington House in a manner more suggestive of permanent habitation than of a two months' stay. It has reshaped the rooms into municipal halls and dwelling-rooms and bedrooms, each with its own private ceiling and appropriate wall decoration; in the large rooms, huge frescoes; in the small, samplers or woolwork pictures or paintings. Not all the mural decorations, by any means, are to be admired; but a few are admirable, and chief

amongst them is a fine three-part composition of Galway peasants in Augustus John's best manner.

With more space at our disposal, we should like to single out some individual excellences among much beautiful work. But we must pass instead to a question that is really crucial if the Arts and Crafts Society is to do the work that, according to its prospectus, it aims at doing. Has it stepped down from its aloofness on to our commercial stage, or is it still retrospective and in the apostolic succession of Morris and his followers? (It is hard not to speak ecclesiastically among so many altars and apses.) We have certainly seen, outside the exhibition, handicraft of more enterprise and adventurous beauty than we see within it. One small room, however, that has excited much interest is an innovation: the very modest exhibit of the Design and Industry Association, every article in which was chosen from manufacturers' stock. Here the general public, who cannot hope to possess the luxurious works of art that surround them in the Exhibition, will find objects of daily use that are also good to look at. Here we see, on a small scale, an attempt to realize the ideals of the *Deutsche Werkbund*, which, as Clutton Brock pointed out in an excellent little pamphlet printed by the Design and Industry Association, won its victories over us not because it aimed at overcoming English industry, but because its object was the excellence of German industry. This highly coloured little room is an encouraging example of what may be done when machinery works in the service of good design. Fortunately, we have at least one object lesson outside the exhibition in Messrs. Heal's shop in Tottenham Court Road.

We wish the Arts and Crafts Society had felt it within their scope to have an exhibit of necessarily machine-made things—a motor-car, a gun, a model aeroplane—to demonstrate the functional beauty of good design and workmanship. They might in another way also have used this opportunity for influencing public taste, by offering those personally conducted tours of the exhibition such as, in the days before the British Museum succumbed to economy, did much to direct and stimulate the observation of the public; or by a few written notices have called attention to excellence of design and its cause.

EDUCATION AT THE BRITISH ASSOCIATION NEWCASTLE MEETING.

ON Wednesday, September 6, the Rev. W. Temple, President of the Education Section, delivered the opening address. He began with an apology for his own limited equipment for the task. His experience had been wholly with education of the secondary school and University type; but it was in the sphere of secondary education that our whole equipment was most conspicuously defective, and he would limit his remarks within this range.

The German Model.

The War had brought home to all the importance of German thoroughness, and in her organization of material resources she had won our well merited admiration. But in regard to moral conduct and in the art of dealing with other men and other nationalities she had provoked the horror of the civilized world. We must look to German education in order to perfect our own, not to emulate theirs.

Faults in the Past.

Our education in the past had been too bookish. We must educate all the faculties, and for this manual, as well as mental, work was needed. There was an obvious danger of attempting too much and overloading the curriculum, but literary study can be so conducted as to develop the scientific habit, and natural science can be so taught as to expand the imagination, and through that the sympathies.

Public Schools.

But what is far more important is the spiritual side, and this depends on the social life of a school or institution. He spoke with diffidence, but it was his conviction that this corporate life could not be fully realized otherwise than in a boarding school.

At any rate, that public spirit and *esprit de corps* to which all attached such weight had been best shown in those great private institutions which are called the public schools, and in the older Universities. Of that life games form a leading part. The boy who worked hard at lessons was regarded as working for his own sake, whereas the boy who played hard did so as much for his house or the school as for himself.

The great defect of our public schools was that all boys came from one social class, and that their horizon was limited to the traditional ways of that class. In the future all schools must have real playing fields, not just an asphalt yard for the children to run about in, and there must be supervision which is quite compatible with individual liberty and responsibility.

The Educational Ladder.

We must get rid of the false ideal, which offers exhibitions and scholarships to enable the pick of the elementary pupils to carry on their education from stage to stage, for in that way we shall only raise a generation of self-seekers. Instead of the educational ladder we must aim at the educational highway, a system of free education from the primary school to the University that shall exclude at certain stages those unable to profit further by school teaching and to provide for these some form of apprenticeship. All this must be a work of time, and meanwhile much has been done, and more can still be done, by University tutorial classes, a full account of which will be found in Mr. Mansbridge's book with this title.

This proved literally how much first-class ability in the country was allowed to go to waste for want of opportunity. It proved also that if a man had kept his mind alert he could take up University work without having enjoyed any secondary education.

The Curriculum of the Future.

First must come a knowledge of human nature, the humanities, a knowledge that all will need, whatever their subsequent calling or profession. The mistake of the past has been to identify the humanities with classical studies and scholarships in the narrowest sense of the word. The old race of classicists have been defiant in manner, and retrograde in practice. He would like to see as an experiment a secondary school conducted on the following lines. The staple of the school curriculum to be European History and English Literature. At the bottom, elementary Latin, which provides the best mental gymnastics, and, of course, elementary Mathematics and Natural Science. Perhaps also French, but of that he was more doubtful. For pupils who have shown aptitude in Latin, Greek should be begun at the age of sixteen or sixteen and a-half. There would be no modern side, but, at the top, specialization either in the linguistic or in the scientific branch.

The One Thing Needful.

But, after all, this was only machinery. The one thing needful was the spirit that inspires and animates the whole. Of this he need say little, for it had been admirably set forth in Mr. Clutton-Brock's recent book, *The Ultimate Belief*. Goodness, Truth, and Beauty—that was a trinity only realizable by a belief that God is at once perfect power and perfect love. This belief could not be proved, but must be accepted as fundamental; it must underlie all education, and those teachers who are unable to accept it must have the courage to proclaim themselves as Agnostics, or virtually atheistic. It followed that teachers of the future must learn the science of the spiritual world, which is called Theology. No outrageous demand if all citizens are required to learn something of the science of the material world.

[This *précis* was incidentally omitted from our last number.]

MONTESSORI SUMMER SCHOOL.

By DR. JESSIE WHITE, Hon. Organizer.

IN one way the Montessori Summer School was unique, for it was run on the lines of strictest economy, such as would certainly have commended themselves to the Chancellor of the Exchequer. As a result, many young teachers and teachers from small country schools attended it. It lasted for three weeks; it provided one lecture and one discussion every day, and a Montessori class for the village children in the beautiful recreation hall of the picturesque village of Wootton, in Berkshire, for a tuition fee of twelve shillings. The accommodation limited the number to a little over fifty. Three town children from the Society's Observation School were taken down to attend the school, and it was very interesting to observe the effect which the novelty of country life exercised on them. It was interesting to note,

too, how the bucolic stolidity of the village children melted in the freedom of the holiday school and the attraction which the various parts of the material and the instruction in domestic duties afforded them. The latter made a special appeal to the village mothers who found the whole affair a most agreeable diversion, and who were always at their gates to watch the party stream by to its lectures in the village school.

These lectures were given by Sapper C. A. Claremont, Miss Amy Clarke, Miss Blackburn, Mr. McConnell, and Miss Muriel Matters, all except Miss Blackburn holders of an International Diploma, and Miss Blackburn is noted for her very successful introduction of the method into a large infant school in Leeds. The discussions were for the most part animated, and a great deal of help was given to would-be Montessori experimenters by the experts as they went up and down the hill together, through the meadows on the way between Boris Hill and Wootton.

The school was under the direction of Miss Booth, now directress of the Society's Observation School; Miss Maitland, of Dundee; and Miss Gunn, newly back from Barcelona.

The Society owed very much to the kindness of the Vicar of Wootton, Rev. W. K. Stride, Mr. and Mrs. Mathews and their daughter, and to Miss Haig-Brown and Mr. Lynam, of Oxford, who lent chairs and mattresses.

Among those who went to Wootton was the attendant from the Society's Observation School. It was her first visit to the country, and she found it very quiet. What surprised her was that all the people did not get up early. In case she should forget her experiences she has to remind her of her happy three weeks a photo, taken by the village postman, of herself watching the children at rest in the hammock beds which had come from London. She will not soon forget the village boy's description of macaroni as "white sausages with holes in them."

It was a time for all of tranquillity and joy. There was beauty on every hand, in the quaint cottages, the fine trees that surrounded them, the fields of waving corn, and the views of the Berkshire downs which sometimes rolled themselves up in a haze of blue, or of the towns and downs of Oxford. It was hard to believe in the warfare that was deluging with blood country fields elsewhere, until on Sundays in the village church the long list of villagers who had gone forth to do battle were prayed for one by one by name.

It was well for those who were town workers to find themselves in a village in the heart of England, and, as they drank in its beauty and appreciated its kindness, to catch the inspiration which came to them through the Barcelona students from one who has roused the world to a sense of the potentialities of beauty and grace, of helpfulness and kindness to be found in little children as no one has roused it before.

OBITUARY.

ARTHUR GEORGE WATSON.

WE regret to record the death of Arthur George Watson, which took place on October 21, at his residence, the Uplands, Wadhurst. Born in 1829, he was educated at Rugby and Balliol, took a First in Classical Finals, in 1852, and was elected the next year to a Fellowship of All Souls. He was appointed in 1854 to a Mastership at Harrow, a post that he held till 1891, when he retired to the Sussex home, where he has since lived. He married, in 1864, the eldest sister of Sir Kenelm Digby, a lady endeared to all old Harrovians, whose death he survived by only two years. He leaves two sons, one of them the Head Master of Queen Elizabeth's School, Ipswich, and four daughters. As an active magistrate and J.P. for the county, his influence was widely felt, and the large fortune to which he unexpectedly succeeded, late in life, was expended mainly in works of charity and mercy. The Balliol cottages that he built at Wadhurst commemorate his attachment to the old College. His house at Harrow was deservedly the most popular, and he is almost the last survivor of the famous staff who date back to Vaughan's reign. The sobriquet of "Vanity," familiar to all Harrovians, was given solely to distinguish him from a mathematical master of the same name, and survived as a testimony that from first to last "he nothing lowly did or mean," but "bore without abuse, the grand old name of gentleman."

CORRESPONDENCE.

THE MOTHERS' UNION.

To the Editor of the Journal of Education.

SIR,—The awful wastage of human life in the Great War, which is draining our country of its manhood, calls to us in no uncertain tones to see to it that the lives so gloriously laid down shall not fail of the fruits of noble sacrifice. The attention of all thoughtful people has been directed of late to the necessity for preserving infant life, both by remedying ignorance and insanitary conditions, and by combating the menace of the falling birth-rate.

It can hardly be denied that we have to a great degree been culpably indifferent to the value of the greatest of national assets, and the time has surely come when every effort should be made towards the more efficient care of infant life and childhood generally, so that the annual loss through death in this country of something like 100,000 infants, under the age of twelve months, may be arrested.

As is well known, the Mothers' Union, established in the year 1887, stands for the uplifting of family life in the highest sense; while, through its membership of over half a million, it is in touch with all parts of the Empire.

At this crisis in our national history an imperative call has, we believe, come to the Union to use all the resources of its organization for the sacred cause of motherhood and child life.

The Council, realizing that the work is being hindered by the lack of proper accommodation for developing this practical side, earnestly appeals to all those who have the welfare of the nation at heart to contribute towards the sum of £50,000 for the purpose of erecting a central building to be called after the venerated foundress of the Mothers' Union, "The Mary Sumner House." It would be necessary for the time being to take temporary premises, which are immediately available, as it will be understood that building operations cannot begin before the end of the War.

The Institute when completed would admit of the Union taking in hand much work that is waiting to be developed. It would contain a central hall large enough for Council meetings and lectures on all that concerns women's work, and attached to it would be a large maternity centre to be worked by experts. One of the best known voluntary health associations has approached the Mothers' Union with a view to offering its co-operation, and the Institute would also form a training centre for social and Mothers' Union workers at home and overseas.

The Council feel sure that this scheme will meet with a generous and sympathetic response from the public when, as at this time, the nation is mourning the loss of tens of thousands of her sons who have given their lives for the freedom of the generations to come, and that it will bear in mind the sacrifices made by the women of the Empire, who have so ungrudgingly given of their best in the cause of honour and justice.

It being one of the chief aims of the Mothers' Union to lay the foundations of true and noble character, it follows that training in such a centre would comprise not only the care of the body, but also the care of mind and spirit, and of all that constitutes the perfect whole.

The Lord Parmoor, K.C.V.O., and the Hon. Evelyn Hubbard have consented to act as Hon. Treasurers to the fund.

Contributions may, if desired, be spread over three years, and should be paid to the account of the Treasurers, Mothers' Union Building Fund, at the Union of London and Smiths Bank, 27 Victoria Street, London, S.W., or sent to the Central President, Mothers' Union Offices, Church House, Westminster, S.W.—I am, Sir, your obedient servant,

EMILY WILBERFORCE,
Central President of the Mothers' Union
(Incorporated).

"WAR AS A TEST OF EDUCATION."

To the Editor of The Journal of Education.

DEAR SIR,—I hope you will allow space for a few lines on the subject of your note, in the last issue of *The Journal of Education* (October number), entitled "War as a Test of Education."

You have been so exceptionally fair-minded and broad-minded in your attitude towards Germany since the outbreak of the war, that I cannot but feel one passage in the note must have been written in ignorance of the facts. You say: "We [the English] may, however, fairly claim that, whatever have been our sins in the past [you are here referring to the spirit of racial hatred, arrogance, and cruelty], there has always been a saving minority to protest against them, and that this is lacking amongst the Germans may be a result of their highly centralized education" (the italics are mine).

Now, surely you must be aware that there exists in Germany at this moment a minority—quite large in numbers, and made up of some of the finest hearts and intellects in Europe—which is protesting as much as is possible against these sins of racial hatred, cruelty, &c. This minority, indeed, is protesting at risk of losing employment, freedom, and perhaps even life itself. Take, for example, the case of Prof. Förster, of Munich University, who made the most magnificent and courageous speech on July 19 last, deploring Germany's present aims and ideals. Of this a Zurich Journal says: "The academic youth of Munich has greeted the badly libelled and much abused man (i.e. Prof. Förster) with a storm of approbation. Without this rash protest it would have been impossible to break the ban of the Censorship, and to bring the fact out, that there were more people in Germany with a modern outlook than one might believe" (italics mine.—B. L.). Or will you turn for a moment to this extract from the *Népsszara*, a Hungarian Social Democratic Journal, dated June 3, 1916?

"Our hearts bleed, our souls cry, remembering the seven thousand men—of our German and English fellow-creatures, who have been drowned in the salt seas as if they were so many noxious rats—and we are told to rejoice, because this is the road to peace—woe to us that it should be thus! It is to the burning shame, to the eternal disgrace of humanity that it should be so" (and a good deal more in the same strain).

And, lastly, let me finish by a quotation from the Debate in the German Reichstag on October 11, reported in to-day's *Times*:

"Millions of men and women are looking to see whether some gleam of peace emerges from sufferings that are becoming inhuman. . . . Dreams of world domination have not been realized in this war, and they will not be realized. The whole system supported on the bayonet point has already collapsed" (Herr Haase, Socialist Minority Party).—Yours, &c.,

BARBARA LOW.

INDUSTRY AND MOTHERHOOD.

To the Editor of The Journal of Education.

SIR,—The Women's Industrial Council is undertaking an inquiry into occupations and conditions of occupations likely to prove injurious to girls or women as prospective mothers.

At present, although a good deal of information bearing upon this point must exist in official records and in the private notes of medical practitioners, none of it has been so collected and collated as to be readily accessible. Yet the guidance of ascertained facts would be of great service to parents, teachers, and advisers of girls entering upon industrial occupations, as well as to women workers of all grades, and ultimately to the country at large.

The difficulties of the inquiry will obviously be great, but the methods employed in a somewhat similar American investigation furnish useful suggestions, and the officials of two Government Departments have kindly promised advice and assistance which will be invaluable.

Our aim is primarily to ascertain facts, and secondarily to agitate for the alteration of any unsuitable conditions which may come to light.

As a general principle, we think the prohibition of any particular employment for women undesirable, but, if there does exist any employment likely to injure women as mothers, we think it important that the facts which make it so should be known to women.

How far we shall be able to carry our inquiry will largely depend upon the amount of financial support which the Council receives from the public.

Surely for a purpose of such national importance we shall not appeal in vain.—Yours, &c.,

CLEMENTINA BLACK, President.
F. V. M. TAYLOR, Secretary.

Women's Industrial Council,
7 John Street, Adelphi, Strand, W.C.

EDUCATION AFTER THE WAR.

To the Editor of The Journal of Education.

SIR,—Despite the absorbing interest of the War, and despite the political truce, the problems of National Education are appropriating a large share of public attention. They are penetrating also into the political arena: for the misfortune is that almost every step in educational progress becomes entangled with politics, and may be blocked or hampered in the House of Commons.

The Committee of the National Education Association feel that they must prepare, even during War, for the coming struggle, and they invite your readers to join them. The Association has taken a leading but unassuming part on behalf of popular education in most of the struggles since 1870; but the great result is yet to come. Our program is very simple; it is the full and free development of the intellectual capacity of all, under the guidance and maintenance of public authorities controlled by public opinion. In pressing towards this mark we are tied to no party, no creed, no sectional interest; almost alone amongst organizations we are free to pursue all developments of National Education in the public interest alone.

Whilst the War lasts we are not proposing to ask for a Campaign Fund. Our immediate purpose is to enrol men and women who care about National Education, so that we can send them our papers, receive their suggestions, invite them to our meetings, and in other ways prepare to have their co-operation at hand when the time for prompt action arises. The nominal enrolment fee (5s.) will cover the cost entailed by the effort to secure this object. Preparation and organization is our aim, so that after the War, when many other problems will force themselves upon statesmen and the public, we as a united body may be ready to keep education problems to the front.—Yours &c.,

JOHN MASSIE, Chairman.

A. J. MUNDELLA, Secretary.

National Education Association, Caxton House,
Westminster, S.W.

THE NEW HOSPITAL FOR WOMEN.

To the Editor of The Journal of Education.

DEAR SIR,—This hospital, started by Dr. Elizabeth Garrett Anderson in 1872—the pioneer of those staffed by medical women—is in urgent need of funds to carry on its work.

There is some danger that it may be overlooked at the present time, because of the pressing demands being made on behalf of wounded soldiers, but it should not be forgotten that it is, in some measure, owing to the War that the number of women seeking admission here has considerably increased, there being less accommodation for them elsewhere.

Many of these women are the wives of sailors and soldiers, and it is a national duty to see that the wife is cared for while the husband is fighting abroad.

In order to cope with an ever-lengthening list of patients awaiting admission, the Committee has been obliged to provide extra beds both here and at the Continuation Hospital at New Barnet; but the increasing cost of all the necessities of life is causing the gravest anxiety, and generous help is much needed, or it is feared that these beds will have to be given up.

Any contributions will be gratefully received and acknowledged. Annual subscriptions, which form the most reliable income, are specially desired.—Yours faithfully,
ALICE WESTLAKE,
144 Euston Road, N.W. Treasurer.

A NEW RUSSIAN DICTIONARY.

To the Editor of The Journal of Education.

SIR,—We have read with much interest the article, "Russian Grammars and Readers," by "H. A. S.," in your September issue, and note that it draws attention to the English student's urgent need of a thoroughly sound Russian dictionary on a large scale to fill the place formerly occupied by Alexandrow's work, which is now to a large extent obsolete, and the first volume of which, moreover, is out of print. We desire to inform you that such a work is in preparation by a Russian scholar resident in England in co-operation with a Cambridge scholar, and that we hope to make a formal announcement respecting the work very shortly. It is estimated that it will contain about four and a half million letters, roughly half as much matter again as Alexandrow's book, and be printed in two royal 8vo volumes in relatively large and very clear Russian and English types, with accented catchwords. Like Mr. Freese's smaller dictionary just published, it will deal in separate articles with all parts of verbs different from the infinitive, and all parts of nouns different from the nominative singular. "H. A. S.'s" suggestion that the value of such a work would be

enhanced if roots common to Russian and Greek and Latin words were indicated seems to us well worthy of consideration, and we hope to be able to adopt it.—Yours, &c.,

KEGAN PAUL, TRENCH, TRUBNER & CO.

Broadway House, 68-74 Carter Lane, E.C.

September 12, 1916.

UNIVERSITY OF LONDON—UNIVERSITY COLLEGE.

SESSION 1916-17. FIRST TERM.

PUBLIC LECTURES.

- † "Phonetics and Its Uses" (Daniel Jones, M.A.), Mondays, November 6 and 13, at 5.30 p.m.
- * "The War: The Third Phase" (Prof. A. F. Pollard, M.A., Litt.D.), Thursdays, November 9 and 23, December 7, at 5.30 p.m.
- "The Physiology of Food and War Economy" (Prof. W. M. Bayliss, M.A., D.Sc., F.R.S.), Fridays, November 3 and 10, at 5.30 p.m.
- "Some Aspects of the 'Divina Commedia'" (Barlow Lectures) (Edmund G. Gardner, M.A., Litt.D.), Wednesdays, November 1, 8, 15, 22, and 29, at 3 p.m.
- "Criminal Law: Its Latest Developments" (Prof. Sir John Macdonell, K.C.B., M.A., LL.D.), Wednesdays, November 1 and 8, at 5.30 p.m.
- * "The Churches of the South of France" (Prof. F. M. Simpson, F.R.I.B.A.), Thursday, November 2, at 5.30 p.m.
- November 7, 14, 21, 28, December 5, at 5.30 p.m.
- * "The Town Planning of Greater London after the War" (Prof. S. D. Adshad, M.A., F.R.I.B.A.), Tuesdays, November 7, 14, 21, 28, December 5, at 5.30 p.m.
- "National Economy" (Newmarch Lectures) (Henry Higgs, C.B., LL.B.), Wednesdays, November 8, 15, 22, and 29, December 6 and 13, at 6.15 p.m.
- "Hygiene: Some Lessons of the War" (Prof. H. R. Kenwood, M.B., D.P.H., F.C.S., F.R.S.E.), Friday, November 17, at 5.30 p.m.
- † "The Ergonic Theory of Colloquial French" (Harold E. Palmer), Monday, November 20, at 5.30 p.m.

All these lectures are open to the public without fee. To avoid disappointment and overcrowding, tickets will be issued for those marked *, but seats will only be reserved for ticket-holders till ten minutes before the beginning of a lecture. Applications for tickets, stating name and address of each person for whom a ticket is required, should be sent to the Secretary, and a stamped addressed envelope should be enclosed with each application.

The lectures are not intended for any persons under nineteen years of age who are not undergraduates of the University.

In order to avoid disturbing the lecturer and the audience, no one arriving more than five minutes after the time fixed for the beginning of a lecture will be admitted, and no one should leave before the conclusion of a lecture.

WALTER W. SETON, M.A., D.Lit., Secretary.

University College, Gower Street, W.C.

† For further details concerning these lectures and others open to the public, to be given in the Department of Phonetics, see special leaflet.

"IT IS CLEAR

that a capable agent who has pursued his calling for years will have gathered, by visits, by personal interviews, and by correspondence, a globe of precepts, and that his profession of recommending schools is no idle pretence."

The Journal of Education, June, 1916.

This is the definition, by a competent judge, of what should constitute a
USEFUL SCHOLASTIC AGENT.

It may be presumed that no one would knowingly make trial of the services of any other kind, but it is still true that a proportion of Principals are induced to yield to the importunities of plausible and worthless concerns, with the resultant loss and disappointment that might be expected. This is a disillusioning experience for which there is no necessity. The established, reliable Scholastic Agencies are not many in number, and they are well known, and their record and standing easily to be ascertained. As one of these we have a sufficient claim to clients' confidence. If, further, we obtain the greater share of Parents' Inquiries, we also take unusual pains to secure them. At present our advertisements are appearing in nearly 400 papers in this country alone; and, outside of enemy countries, the War has made no difference in the circulation of our List of Schools.

As a result, few days pass without at least one letter of thanks from parents who appreciate the assistance we have given them. Principals are equally generous in expressing their indebtedness, as this recent acknowledgment, amongst others, testifies:—

ED:

September 20, 1916.

"Gentlemen,—Our term has just commenced, and I feel I must write to thank you for your help in extending my Boarding Connection. I am most grateful. To-day we scored another success. Mr. H. of B. came over to see the place, and had no hesitation in deciding to send his boy to us. He joins us next Monday. I knew from his conversation that your recommendation had been the deciding factor. The Nottingham boy came on Saturday; this, too, is due to your agency. H. and R. are both with us. Owing to your splendid work, I have opened a new dormitory this term—a beautiful room; it took Mr. H.'s fancy at once. At present, of course, it is not half full, but I have no fears for the future, having unbounded confidence in you."

If you have not yet made trial of our services, we shall be glad to hear from you, with particulars of your School.

A Selection from Methuen's List.

READY EARLY IN NOVEMBER.

THE ELEMENTS OF ENGINEERING DRAWING.By E. ROWARTH, A.M.I.E.E. With numerous Diagrams.
Crown 8vo, 2s. 6d.

This is a textbook specially arranged for Day and Evening Students in Junior Technical Institutes, and for Engineering Students in Secondary Schools and Colleges. Thoroughness of treatment of the preliminary work is the keynote of the volume which has been drawn up on new and original lines. Considerable space is devoted in the earlier chapters to exercises having as their object the rapid development of the student in the skilful manipulation of instruments, squares, and scales. These are followed by a series of graduated exercises specially chosen and with a view to the practical requirements of a draughtsman. The instructions for the earlier examples are very comprehensive, and should enable the student to work independently of the teacher, and at the same time acquire the knowledge of technical details which is necessary for the more advanced exercises which follow.

JUNIOR ENGLISH. By F. J. RAHTZ, M.A., B.Sc.; Twelfth Edition. Crown 8vo, 1s. 6d.

HIGHER ENGLISH. By F. J. RAHTZ, M.A., B.Sc. Tenth Edition. Crown 8vo, 3s. 6d.

A JUNIOR FRENCH PROSE. By R. R. N. BARON, M.A. Seventh Edition. Crown 8vo, 2s. [Junior School Books.]

STORIES FROM ANCIENT HISTORY. By E. BOWYER, B.A., B.Sc. With 2 Maps. Second Edition. Crown 8vo, 1s. 6d. [New Historical Series.]

STORIES FROM ROMAN HISTORY. By E. M. WILMOT-BUXTON, F.R.Hist.S. Fourth Edition. Crown 8vo, 1s. 6d. [Beginner's Books.]

SCHOOL ANNOUNCEMENTS—
Scholarships, Official Notices, School Transfers, Partnerships, &c.—
 6d. per line; minimum charge, 5s.
Posts Wanted or Vacant.—30 words for 2s.; each 10 words after, 6d.; prepaid rate.
Lectures, Classes, Non-Resident Posts, &c.—48 words for 3s.; each 8 words after, 6d.; prepaid rate.

An extra fee of ONE SHILLING is charged on advertisements with OFFICE ADDRESS.

If a receipt is required for an advertisement under 10s., a post card or a stamped envelope must be enclosed.

[Advertisers are reminded that "Letters addressed to INITIALS or to FICTITIOUS NAMES, or to a CHRISTIAN NAME without a SURNAME," at Post Offices are not taken in, but are sent at once to the Returned Letter Office.]

All Letters respecting Advertisements and Subscriptions should be addressed—
 "THE PUBLISHER, THE JOURNAL OF EDUCATION OFFICE, 3 BROADWAY, LUDGATE HILL, E.C." Money and Postal Orders, on the Post Office, Ludgate Circus, E.C., should be made payable to WILLIAM RICE, JUNIOR; Orders and Cheques may be crossed, "The London City and Midland Bank, Ludgate Branch." Postage stamps can only be received at the rate of thirteen to the shilling.

Notice must be given of all remittances through the Post Office from abroad, stating full name and address of the sender; and all Foreign Money Orders must be crossed for payment through a Bank.

Date of publication of next issue will be found at top left-hand corner of front page.

LONDON:

WILLIAM RICE, JUNIOR, 3 BROADWAY, LUDGATE HILL, E.C.

SALARIES AND WAR BONUSES FOR SECONDARY TEACHERS.

A CERTAIN number of Local Authorities have granted a War bonus to their teachers, and at first sight it looks as if secondary teachers were included amongst these. Unhappily, however, the benefit is mostly confined to teachers whose salary does not exceed £104 a year, and, bad as is the case of secondary teachers, most of them get more than that, though the tables of the Assistant Masters' Association, to which we shall refer presently, record that the commencing salary in ten County Boroughs out of thirty-seven is below that figure. Still, with the initial salary we are not so much concerned, for, though bachelor life on two pounds a week or less gives little chance for the riotous enjoyment of life, it is more tolerable than family life on four pounds a week. Now, the Assistant Masters' Association produced in 1914 a pamphlet giving copious and valuable information on the subject of salaries, and the striking feature about the figures is the extremely small number of cases in which a man can ever get beyond £200 as an assistant—even when there is a scale, and in many cases there is no scale. Herein lies the striking difference between the prospects of the German teacher and that of his English contemporary. The two begin life much on a level, the German's modest £135 a year comparing pretty well with the Englishman's first earnings, but the former, in the large towns at all events, usually reaches the comfortable income of £360 a year, and can look forward to a pension of 75 to a 100 per cent. of that; whereas, as we say, the unfortunate Englishman seldom gets above £200, and has to provide his own pension out of it. It is this fact which has caused the War to bear so hardly on secondary-school masters. A man with a wife and children, whose income does not exceed £200 a year, must spend about one-third of it on food and coal, the cost of which has increased by, speaking roughly, 50 per

cent. This is equivalent to a clean cut of £30 out of the man's salary. In addition, there is income tax, which amounts to £9 a year, as against £2 in normal times. Our average assistant master is clearly poorer for the War to the tune of something like £40 a year. So far only one or two Authorities have recognized this and decided to help him. Birmingham has done a little. The history of the question in this town is a curious illustration of the attitude of many an average citizen towards the teacher. The sub-committee of the Education Committee recommended that all the "non-manual employees" of the Committee should have a bonus, *except the teachers*. So the War Office might recommend that all soldiers should have an increase of pay, except those engaged in fighting. Happily, the absurdity of this was too much for the Education Committee and the Corporation, and all teachers whose salary does not exceed £250 a year will get their bonus. This will include all the masters in the Council's secondary schools, for the Birmingham scale is £100, rising to £200, a rate of wage of which a city that claims to be the second in England for wealth and importance ought to be heartily ashamed. Oldham, by the way, believes in that same principle of confining benefits to soldiers who do not fight: the clerks and attendance officers are to get a bonus, but the teacher none. It is a joke with our Army in France that the farther from the front the better the pay; evidently, with some Education Committees, the farther you are from the classroom the better your prospects.

We have said nothing about assistant mistresses, but it is obvious that they are in the same case as their masculine colleagues, and, if they do not have families to support, in many cases they have other calls upon their purse.

Not only have the real wages of school masters and mistresses been substantially cut down by the rise in prices, but their work has often been substantially increased. In many cases the absence of colleagues at the War has deranged the work of the school and put a heavier burden on to the shoulders of those that remain.

The effect of the iron law of the £200 maximum—the broad fact which emerges from the tables of the assistant masters—is disastrous, and will become more disastrous, as its full significance is appreciated by the young men and women of this generation. It means that, except for a few who are endowed by nature with a passionate love for the young, no one will become a teacher who can become anything else. Education must be content with the leavings of other professions. Men especially must shun it as a calling. If any take it up, except from sheer necessity, it will be men of a rather colourless type, men who have little ambition and do not look ahead, men lacking in energy, force, and "push and go." It is not this type of man who will breathe a new spirit into education. But it is this type that the £200 a year maximum will encourage.

It is surprising that a Government which has appointed so many Committees has appointed none to consider the supply of teachers. It is all the more incumbent on the two Committees on Science and Modern Languages that they should give some attention to the question, although the limited scope of their functions will hardly permit them to discuss it fully. But the latter Committee might, for instance, consider what is the cost of a language teacher's education after he leaves school, taking into account University course, residence abroad, and period of training or apprenticeship. It cannot be less than £500, and may well be more. Add to this that, all through his life, he must keep his knowledge fresh by visits to the Continent, and it is clear that the iron rule of £200 a year maximum ought to operate as an absolute deterrent to all intelligent men. An evening contemporary some years ago started a discussion on the question: "Are Schoolmasters dull?" When we read the statistics which the assistant masters have collected, we feel inclined to answer: "Yes, or they would not be schoolmasters."

LORD BRYCE has accepted the Presidency of the Council of Humanistic Studies.

THE CENTRAL SCHOOL OF SCIENCE AND TECHNOLOGY, STOKE-ON-TRENT.

By D. MACFADYEN, M.A., F.R.Hist.S.

ONE of the first reactions of the War on English opinion has been a strong and insistent demand for scientific education. It is at least possible that we are on the threshold of an era of education much more thorough and far-reaching than any of those out of which our present educational institutions have come. Modifications in the direction of teaching scientific method will have to be introduced into all secondary schools; and there will be a movement to link foundations which have been purely academic in their aims more directly with manufacture and industry. One way of meeting this insistent demand for scientific education is by means of an institution which comes between a school and a college—taking its pupils from the upper schools of a neighbourhood and its methods and curriculum from the standard of a University College.

An illustration of such an institution is the Central School of Science and Technology, Stoke-on-Trent. The school is situated in the centre of the district where the pottery industry has been located for a century and a half. Its object is to apply scientific method to the study of the local industry. The school has no ambitions of a purely academic kind. It is no part of a ladder leading to the side-track of a University career—as the Midlander would say. The task set before the founders of the school was something more closely in touch with an immediate and practical problem. The pottery industry is one which touches several sciences, and specially requires the use of a high level of artistic and scientific method. The industry was being carried on mainly by "rule-of-thumb" methods. It was almost a tradition of the district that the manufacturer was a man who had started at the bench and made his way up by force of character rather than by any wider knowledge or outlook than that of the men he employed. It was a measure of self-preservation for the district to get access to the sciences which touched its own interests.

The school was planned to meet this practical need. The Principal has worked in close and constant touch with manufacturers, and has carried on investigations directly minimizing loss and increasing the productivity of the ovens. In its freedom from academic stiffness, its closeness of touch with a local industry, and the preparation of workers to do their work scientifically, the institution is probably unique.

What has been said chiefly applies to the Pottery Department of the College. There are others—Mining, Physics, and Chemistry—which, although quite as efficient, are much upon the same lines as institutions in Birmingham, Manchester, and Sheffield. The Mining Section is as well equipped for its work as any in this country, but in elaboration and magnitude it would be surpassed by such institutions as the Massachusetts Institute of Technology, now incorporated with Harvard University (Mass.), McGill University (Montreal), and the great Charlottenburg Institute near Berlin. But it is said by those who know that the Pottery Section is unique, and has no equal either in Germany or America. This must be regarded as an apology for giving special attention to the pottery side of the College.

The first and second years of the five-years' course may be taken in a preliminary evening school. Elder lads may take these classes during their final years at school or their first years in a manufactory. Students who come from secondary schools, after a full course, come in at the fourth year, and are required only to take the two years which form the fourth and fifth year of the whole course of study.

Inorganic chemistry runs through the three years, and there are courses in practical mathematics and physics, but the *pièce de résistance* is the three years' course in pottery. The course deals with both theory and practice, and discusses the problems of the potter from all points of view,

using the literature of pottery, both classic and modern. Here are two specimen sections of the syllabus :—

"(1) The composition of the leading types of British pottery; earthenware; semi-porcelain; granite; stoneware; bone china; jet and rockingham; yellow ware; terra-cotta; jasper; differences in the method of preparation and working properties. The compounding of a body by balancing the properties of the different compounds.

"(2) 23-27. General remarks on U.G. colours, coloured glazes, coloured bodies, and coloured saps. Flow colours. Colouring oxides, cobalt, nickel, copper, iron, manganese, chromium, titanium, uranium-chemical composition, physical properties, colours obtained with the different types of glazes; alkaline or lead; typical recipes; method of preparation."

The prospectus sets forth in leaded type that "Chemistry is not to be regarded as an accomplishment, but as a necessity." The alertness of the school with regard to improved methods is illustrated by the lecture on pyrometers, which includes the latest invented types of those ingenious instruments. There is a diploma in pottery for those who have taken both parts of the course successfully and have done some original research connected with the industry. Advanced students may specialize in subjects advised by Dr. Mellor.

The value of a school like this in a district which lives by a particular industry is cumulative. There is the direct benefit of co-operation between men who understand scientific and men who understand practical methods. The man of science begins his work with the advantage of an accumulated mass of material which may yield results as soon as it is reduced to order. The scientific knowledge acquired in the school filters through the district, and combines with inherited aptitude to make a highly specialized industry. Many attempts have been made to drive out English earthenware from European and Western countries by tariffs. They have broken down because the foreign potter could not rival the skill and adaptability of our potters. So long as we do not export our skilled workmen we can keep a highly specialized and artistic industry in the country.

The Stoke type of college or school is one which might readily be multiplied in various parts of the country. It is a triumph of co-operating factors. It owed its practical character to the voluntary educational effort of a Council for Higher Education in North Staffordshire. The site was the gift of a private individual, but the buildings were erected by public funds. Much of the equipment was given by different firms, and the studentship and prizes are maintained by the Joint Committee of Allied Pottery Manufacturers. The institution is a public one, maintained out of the rates, and forms the natural apex of the public educational system of the district.

SCHOOL PREPARATION FOR DOMESTIC CRAFT.*

By MARY E. MARSDEN

(Head of Women's Department, Battersea Polytechnic, S.W.).

THE influence of school education upon the professional training which succeeds it is subtle, deep, and far-reaching. If school education has extended until the pupils are eighteen years of age, and if they then enter upon a professional training which occupies three or four years, the outcome of the latter depends largely upon the habits of mind and of action which have been slowly but surely built up at school. Those whose work is concerned with the training of women for professional life realize that in no small degree the success or failure of their work has been fixed before the students enter upon this final phase of academic training. When right habits have been formed at school, these can be strengthened and adapted to new circumstances. When, on

the other hand, undesirable methods of work and ways of regarding things have become habitual, the short period of specialized professional training will be spent chiefly in trying to break the bad habits, and consequently in a less degree in endeavouring to substitute new and good ones. It is not an easy task for students of eighteen to begin to learn how to work. This ought to have been acquired at school.

The acquirement of skill in domestic craft depends partly upon manipulative skill built up through muscular control, partly upon the degree of accuracy in work which the student has acquired, and partly on her previous training in the sciences which form the basis of the crafts, *i.e.* physics and chemistry.

Training in manipulative skill does not fall within the scope of this paper, but, since no grounding in the sciences of which we shall speak can be given without an adequate amount of practical work in the laboratory, it follows that girls who have had good science training at school will have thereby acquired a certain amount of manipulative skill, and a certain appreciation of the necessity for neatness, cleanliness, and accuracy in practical work, which can be adapted and extended to the new demands made upon them in domestic craft. It is doubtful, however, whether in all schools the girls have sufficient time allowed for practical work in science laboratories. Science learnt by attendance at lectures, without adequate time being given to practical work, is of little, if any, value. The foundation of accuracy in work and of scientific knowledge should have been laid during school life, and their consideration concerns us this afternoon.

I am well aware that accuracy and attention to detail are not by any means easy to young students as a rule. In fact, it seems evident that, as a nation, English people compare unfavourably, *e.g.*, with Germans in their ability for patient concentration of attention on matters of detail and in the accuracy so necessary to scientific work. In addition to this, in the education of girls, there has been a tendency on the part of some parents on the one hand, and of some secondary schools on the other, not to expect girls to do anything savouring of drudgery. Arrangements have been made so that a very good margin of time has been left for pleasure, and in the actual school work the girls have not been expected to attack difficulties themselves. The result of this is that, when students embark on a professional training, they have then to learn how to grapple with difficulties, and how to concentrate their attention on things which are not at first in themselves interesting, but only become so after the application of thought and care.

Passing on to the consideration of the curricula of schools and their effect on the professional training of students in domestic craft, it is certainly advisable for those who intend to teach this subject to have a sound knowledge of mathematics—including arithmetic and algebra—up to matriculation standard. The reason is that a knowledge of arithmetic is necessary for the calculation and estimation of the various items connected with domestic expenditure, while both arithmetic and algebra are essential to the working out of problems connected with the application of physics and chemistry to the processes of cookery, housewifery, and kindred subjects. The inaccuracy of the arithmetical work of a large proportion of students, even of those who have received their education entirely at our best secondary schools, is surprising and disheartening. Inaccuracy in experimental work is also very general: *e.g.*, in weighing or measuring the ingredients or materials employed in domestic craft, it is easier to guess at the amounts required than to estimate them carefully; therefore guesswork is practised and the result left to chance. The epithet "slipshod" is the one most applicable to the type of practical work which many students do when they enter upon a course of domestic training. I do not for one moment imply that one should expect a high degree of manipulative skill from such students when they leave the secondary school, but I do mean that they should have realized that accuracy is a factor essential to success in practical work. Also, even though time is a vital factor (as is frequently the

* Paper read before the British Association in September 1916.

case in the operations of domestic craft), students usually attach no importance to it, nor to the importance of adhering to specified conditions in general.

In the higher forms of secondary schools there should be more choice of science in the curriculum. Unfortunately there is a tendency, at the present moment, in some secondary schools, for purposes of economy, to substitute botany for physics or chemistry in the higher forms, and to give the girls no choice in the matter. This is very serious from both the educational and the vocational standpoint.

Physics or chemistry provides a training in measurement, in the manipulation of apparatus, and in scientific method which cannot be provided to the same extent in botany. In botanical experiments and in botanical work, the forces at work are, in general, much more numerous and more complex than in the case of experiments in physics and chemistry. It is therefore difficult to ensure in botanical experiments that simplification of data which can be ensured in physical and chemical work; hence it is not possible to give to young students quite the same training in cause and effect in botanical work as in physics and chemistry. Further, the fundamental notions of general elementary scientific principles taken in physics and chemistry courses play a much greater part in later housecraft than does the information gained by girls from their botany course.

(One is here inclined to suggest that, as sometimes taught in girls' schools, the educational and scientific value of the botany course is not infrequently limited by the perhaps excessive worship of the beautiful and artistic note-book.)

If one may coin the word, botany may be regarded as a "derived" science. Physics and chemistry are fundamental sciences, and, if scientific work is to be done at all in the schools—as we say, and with emphasis, that it should—then physics and chemistry should claim precedence, the systematic study of botany coming at a later stage.

While it is quite true that to some girls the study of botany will appeal much more strongly, yet, to deprive *all* girls of the opportunity of studying physics and chemistry merely for the sake of economy is a real and lasting injustice. Inasmuch as in many cases the plan lessens the full utility of their previous science training, and does not offer opportunity for their own mental development on lines for which they have the greatest aptitude, it is not economy but extravagance. The nation is poorer to a degree corresponding to the incompleteness of the development of its human asset.

With regard to the subject-matter in physics and chemistry, which we should like students who are trained as domestic science teachers to have done in the secondary schools, one does not wish to make statements which are too precise and definite, because nothing should be done to cramp the treatment by individual teachers of the subjects in schools. Speaking broadly, however, it would materially facilitate the work of organization in the domestic subjects training schools if the students had attained a school matriculation standard in these two subjects.

Special stress should be laid, throughout the teaching, upon general principles rather than upon the accumulation of details, and, as far as is practical, the knowledge of the students should be based upon information which they have ferreted out for themselves in the laboratories. The school science courses should train pupils to observe and to reason logically, to do accurate work, and to gain skill in manipulation, in addition to the acquisition of new and useful knowledge. The physics course should include measurement, the general properties of matter, and heat, accuracy in observation and in measurement being one of the paramount aims throughout. The chemical portion of the course should include, among other things, such subjects as a knowledge in outline of the chemistry of air and water, their composition and properties, and those of their constituents, natural waters, hardness of waters, acids, alkalis and salts, the common acids, and their more important derivatives; chalk, lime, carbon and its principal compounds; flame, combustion and elementary chemical theory.

If time permit, and the girls are thus able while at school to pass on to the study of the outlines of the chemistry of such substances as soap, common foodstuffs, and of the more important chemical changes which take place in laundry work, so much the better. It is very doubtful, however, whether girls who are working for matriculation, or similar examination (and it is most desirable from many points of view that those who intend to become teachers of domestic craft should work with this object in view), will be able to do more than what one might term roughly the pure chemistry.

If the girls have a sound general knowledge of the fundamental principles of chemistry and physics, they will be in a much better position to profit intelligently by the more advanced work done during their domestic subjects teachers' training course than if they have had little or no grounding in these two sciences.

Even now many people, and among these are some educationists who ought to know better, fail to realize the very great part which the teaching of science must play in an up-to-date domestic craft course. People are still obsessed with the idea, more or less unconsciously, that all the knowledge that a teacher of domestic craft requires is an acquaintance with practical arts and the methods of teaching them. Without labouring the point, it is obvious that any new developments and improved implements for household work, especially with regard to lighting, heating, and cleaning, the preservation and sterilization of foods, the very important but much misunderstood question of food values, all depend upon scientific knowledge. This being so, a domestic subjects training school, which endeavours to keep abreast of the times, must devote a considerable portion of its time to science teaching in addition to the teaching of housecraft. It is therefore absolutely essential that the secondary schools should prepare the students in the general principles of pure science, chemistry, and physics before they enter a training school.

The importance of this preliminary training will be better realized perhaps by those who have not appreciated the large part which science now plays in the teaching of these schools, if I give a summary of the science courses in a typical training school, taking as an example, the one with which I am connected—Battersea Polytechnic Training Department of Domestic Science.

The physics course includes general measurement, specific gravity and heat, and is arranged so as to provide the preliminary training essential to a scientific course. The chemistry course comprises the chemistry of air, water, elementary chemical theory, acids, alkalis and salts, the common acids, and their chief derivatives of importance in daily life, coal, gas, fuel, flame, sugars, starch, alcohol, the study of the principal foodstuffs, textile fabrics, soap, the outlines of the bacteriology of the air, water, milk, meat, preservation and purification of foodstuffs, antiseptics and disinfectants. Much time could obviously be saved if the early portion of the work had been taken in the secondary schools. There are also additional courses in experimental cookery and experimental laundry work, conducted in the chemical department with the co-operation of a specially qualified teacher.

Much importance is attached at Battersea Polytechnic to the instruction given in hygiene, and its special application to the home and school. Students attend the Hygiene Department for this part of their training. Every effort is made to make them realize the importance of the subject, and that hygiene is not a collection of "fads," but a science based largely on physiology, chemistry, physics, and bacteriology, and that a real application is essential for healthy living. Students attend the physiology course for two terms. In the third term hygiene is begun and continues throughout the course. One section is taken by a qualified medical woman who deals entirely with the hygiene of the child. Every endeavour is made to teach the students how to recognize common physical and mental defects, and what necessary precautions should be taken to prevent or decrease such defects. Several lectures in the course deal with infant care and the feeding of infants. A very close connexion exists be

tween the instruction given in hygiene, physics, and chemistry, the various syllabuses having been drawn up by the lecturers concerned, after close collaboration. In the sixth term the students give hygiene lessons to classes of girls. These classes are under criticism, and have proved a most valuable part of the training. It appears to me that well trained domestic science teachers might be drawn upon much more largely than they are, to give definite teaching in hygiene in the schools, as this is often badly given, and by persons with only an elementary textbook knowledge of the subject.

For those students who show special aptitude for the scientific side of the training in domestic craft, a special course at Battersea Polytechnic has been in operation for some years. This is a one-year course of training for a diploma in "Science as applied to Housecraft." It succeeds the two-year course of craft training, which includes the physics, chemistry, physiology, and hygiene, of which an outline has just been given. This special course includes physics, chemistry, bacteriology, physiology, and hygiene. The course is run mainly on broad University lines, and chiefly by recognized teachers of the University. In years to come, the best appointments will probably go to those students who have taken this course or its equivalent. There is a large and steadily increasing demand in the best secondary schools for domestic science teachers who have taken it.

The object of the third-year course in chemistry is, as far as time will permit, to extend the student's general knowledge of chemistry—especially those portions of the subject bearing upon housecraft, upon physiology and hygiene, and also to place the students in a position to be able to follow intelligently textbooks and books of reference in chemistry, hygiene, and physiology. Considerable stress is laid in this course upon organic chemistry. The course also includes an elementary discussion of such subjects as proteins, enzymes, colloids, and vitamins. Considerable stress is laid upon theoretical and practical work in bacteriology, with special reference to housecraft.

From this outline of the science included in a course of training in domestic craft, it will be realized, as is stated in the first part of this paper, that in view of the large amount of science taken in the course, and the fact that housecraft is really applied science, a thoroughly good foundation in science should be laid in the secondary school if we are adequately to train housecraft teachers. Domestic craft is full of possibilities for invention and research.

It is a factor as essential as any, in the general reconstruction which must follow if civilization is to be established after the War. Women must take their share if that reconstruction is ever to be accomplished, and in no sphere can they do so more adequately than in that of domestic craft. They cannot, however, do this important piece of work unless they have been educated suitably for it at school, and trained in a fully organized professional course, combining both science and its application in craft work. Woman trained in domestic craft must play by far the larger part in substituting wise economy of labour, time and money for the almost universal thriftlessness of English households, in checking the appalling wastage of infant and child life, and, by improving the home conditions and knowledge of public hygiene, making it impossible for the present physical unfitness of so large a proportion of our adult population to be repeated in future generations.

CHERWELL HALL SECONDARY TRAINING COLLEGE, OXFORD.—Although the demands of the War on women's work are heavy and the need for University graduates great, there are still a considerable number of women who desire to train as teachers before taking up specific work. During the year 1915-16 fifteen students of Cherwell Hall obtained the Oxford Diploma in Education, and four, *i.e.* Misses G. Frank, F. Rudwick, M. Smith, and D. H. Wright, passed with distinction; six students obtained the Cambridge Teacher's Certificate; and three the Cherwell Hall Certificate for Junior Form Teachers. All students who left in June, 1916, have obtained good appointments, some taking posts left vacant in boys' schools by men on active service.

RESOLUTIONS OF THE HEAD MASTERS' ASSOCIATION.

THE resolutions of a special representative Committee of the Incorporated Association of Head Masters regarding education after the War are as follows:—

1. The most serious defect of English education at the present time is that the moral, physical, and intellectual education of so many boys ceases entirely at the age of fourteen. For these, some compulsory scheme for continued education up to the age of sixteen is urgently needed. Evening classes for full-time wage earners do not meet the need.

2. The efficiency of education depends primarily on the teacher, and no manipulation of subjects or improvement of buildings will be of any use without such an improvement of the position and prospects of the teaching profession as shall make it equally attractive with other careers.

It is in particular a matter of national importance that much more money should be found for salaries and pensions of teaching staffs.

3. Every elementary school should be required to furnish a list of boys of not more than eleven years of age who are of more than average ability, and fitted to pursue a secondary education; and all these boys should be submitted for examination.

3A. This examination should be conducted in such a way that the head masters of secondary schools shall have a voice in the selection of the successful candidates.

4. Free places should not be awarded on a written examination only, but considerable weight should be given to an oral test.

5. Boys should not as a rule be transferred from the elementary to the secondary school after the age of eleven.

6. No boy should be allowed to specialize in any subject until he has passed a definite standard of general education.

7. This standard should be that which a boy of ordinary ability may be expected to reach at the age of sixteen.

8. The subjects of a general education should include English, history, geography, Scripture, mathematics, science, and ordinarily two languages (other than the pupil's own), in most cases French and Latin.

8A. It is assumed that a suitable provision is made for physical training, music, drawing, and some form of manual instruction.

9. The examinations for entrance scholarships to public schools should be brought into harmony with the non-specialized curriculum recommended by the Committee as above.

10. In awarding scholarships tenable at Universities, it is important to limit the scope of the special subject, and at the same time to broaden the basis of the examination by encouraging a combination of subjects — *e.g.* (i) classics and a modern language or a branch of science; (ii) modern languages and history; (iii) mathematics and a modern language. Further, it is essential that pressure should not be put upon the scholar to take his degree in the subject or subjects in which he has gained his scholarship.

11. It is essential that the head master, with his colleagues, should have complete liberty in regard to the internal organization and control of the school. The efficiency of schools inspected by the Board of Education is adequately safeguarded by the Board's inspection. In schools, therefore, maintained or aided by a Local Education Authority, the function of that Authority should be limited to the exercise of administrative financial powers and a broad general control of the type of education provided; the administration of the individual schools should be entrusted to separate governing bodies.

THE Cambridge University Press will publish very shortly a new book by Archdeacon Cunningham, entitled, *The Progress of Capitalism in England*, which will contain the substance of the lectures which he delivered in the London School of Economics and Political Science in the Spring of 1915. In his article on "The Progress of Socialism in England" (*Contemporary Review*, January, 1879), Dr. Cunningham pointed out that even at that time the country was ripe for a remarkable development of State interference in industry and commerce, such as has occurred during the present War. In this volume he insists that in all proposals for economic reconstruction, or for the promotion of economic progress after the War, account should be taken of the experience of the past, and he endeavours to state in briefest outline what that experience has been. Incidentally, he recalls the services to political economy which were rendered by the late Dr. Whewell, and shows that, through disregard of his warnings, the study has been in danger of losing its scientific character.

OUR WONDERFUL MUNITION WOMEN.

By AMY B. BARNARD.

UNDER the auspices of the Ministry of Munitions, a few members of the Society of Women Journalists recently visited munition works in the London area and Midlands. It was an unforgettable experience: trudging miles from building to building, or being whirled from factory to factory in motor-cars, dodging lorries, trucks, engines, "steel snakes," and leather belts; trying to walk in the danger areas in rubber shoes several sizes too large, sampling canteen meals, and questioning women and girls about their work, wages, hours, meals, housing, and welfare generally.

The impression I received—confirmed since by the Munitions Department of the Women's Service Bureau—is that the majority of the women munition workers are inspired by genuinely patriotic motives, especially those better educated. There is another incentive. Bullets, fuses, shells mean the saving of life, a protecting curtain fire between the frail body of some loved one and death. The vision of that dear one in mortal combat is ever before the mind's eye of our huge army of non-combatant munition women. You know this instinctively when you say to a row of them, in their blue overalls and quaint mob caps, "Doing your bit?" There is a flash of understanding in the eyes as they look up from their work an instant—just one brief instant, for well the women know what tremendous issues depend on their output. Family needs also impel the mothers to exertion. Their courage is really superb. In a danger building, where a clumsy movement may bring disaster, I have seen four or five girls filling and finishing fuses, their faces swathed, but their eyes merry; their hands as steady as a surgeon's. No tremor of nervousness here.

A fact that adds to their confidence is that in an instant a lady doctor in whom they place implicit trust, with a nurse and an excellent ambulance, could be on the spot. That lady doctor is worth knowing. She is a Scotswoman, trained at Edinburgh and Cambridge, and her great ambition is to render the work of the munition maker safe and perfectly healthy. She described to me how, by laboratory investigation, she had discovered a solution which, when added to the water with which she washed, protected a girl's skin from the rash that besets the careless worker. When performing certain operations with fuses the face is dabbed with a white powder. The result is there are no "canaries" among her charges.

"I tell the girls," she said, "if they have only a pinprick, not to think it too little a thing to tell me about."

The deadly T.N.T. and fulminate of mercury have no terrors. Every new worker who comes into the factory has a record of her health made, and the doctor goes the round of the factories daily. The clever little woman is kept busy, not so much curing and mending bodies, but advising how to keep in health, and interesting herself in the workers' diet and recreation.

These particular works stand where cornfields waved a year ago, and buildings are still being added. When the writer visited them, accommodation was contemplated for 12,000 women workers. Those engaged in the explosives buildings are required to live in adjoining attractive hostels—low structures with single and double-bedded rooms ranged down either side of a central passage, with linen room by the entrance, bathrooms at one end, and a matron—preferably an ex-sanitary inspector—over the hostel. Around the building garden plots were being laid out, while a library and cinema are being planned for diversion during the winter evenings. Everything connected with this factory, a model in its way, is a fine instance of the manner this country has quietly, hardly known to itself, organized munition making.

A large percentage of the munition women belong to the industrial classes and are ex-elementary schoolgirls, but there are workers from all social grades. There are teachers, often nursery governesses, but, as a rule, members of the teaching profession have taken less kindly to the work than domestics, shop assistants, dressmakers, and others. Widows with young children leave these with a granny, send them to a

crèche, or, if old enough, to school. By June this year 450,000 women were employed by the Ministry of Munitions, and 2,250,000 men.

The superintendents and foremen spoke with warm approval of the industry of the women. Whether they work side by side with men and boys, four in a room, or dozens together in a large shop, they set an example in adaptability, obedience, and keenness. In one place there are three national units—English, Scotch, and Irish, but their only rivalry is over the largest output.

As to wages, the majority of those questioned earned from 30s. upwards, and quite young girls were earning 23s. or 28s. a week. A wage of £1 appeared to be quite small, and that of the less skilled operatives. Rates are highest in Government works, and among the most highly skilled and overlookers of rooms. There have been complaints of low pay in certain controlled works, but such did not come under my notice, and there is an effort to secure a universal minimum rate of £1, whether for time or piecework, bonus or overtime.

Since the educated girl of leisure is greatly needed in munition works, it should be known that the operations do not all involve standing, for some sitting is necessary; also that only some shops are noisy and oily, and, even concerning these, disagreeables have been exaggerated.

One foreman, whom I questioned, considered the girls had a refining influence over the men. "And another thing," he remarked, "you don't hear a cross word, and the men don't swear now."

After that, it might not be inadvisable to have a few women onlookers, while some non-commissioned officers are drilling nice-minded lads from colleges and Christian homes!

Any girl of sixteen upwards wanting information about the free training centres for munition work should write to The Training Section, Ministry of Munitions, Whitehall Gardens, London, S.W. Training is necessary for skilled and semi-skilled work, and the Ministry of Munitions wish it to be known that there is a great opening for women of leisure and well-educated girls to serve their country in munition making, both as skilled workers and overlookers, or superintendents. The normal free course in London lasts six weeks, six days a week, four hours a day. It includes simple exercises in bench and vice work, and turning, drilling and milling, to impart "machine sense," and give some preliminary idea of engineering factory conditions. Special instruction for particular work is given to those showing aptitude for it. There are now some sixty-four training centres in various parts of the kingdom. Thus, the munition net is a big one.

JOTTINGS.

THE Banca Commerciale Italiana has made arrangements with the Education Officer of the London County Council whereby the Bank has set aside a capital sum of £1,000 to be invested in British Government Stock, the interest on which will form an annual prize for a student of the Italian language in the commercial institutes. It is estimated that the annual value of the prize will be £50. Only British-born subjects will be eligible.

TRAINING COLLEGES.—Next month we hope to have more to say on training colleges and the future supply of teachers. The effect of the War so far has been not only to reduce and impoverish the staffs of our schools, but virtually to empty our training colleges and the training departments of our Universities of men students. Eleven Church of England colleges for men have been temporarily closed, and the students are admitted to St. John's College, Battersea. In mixed colleges the men's side has dwindled to a skeleton, and the same, or a diminished, staff of women lecturers are instructing a largely increased number of girls.

THE *Oxford English Dictionary* is making steady progress towards completion, and a new section containing the words "stead" to "stillatim" has now been published, for which Dr.

Henry Bradley is responsible. It includes a total of 1,837 entries, of which 135 are marked as obsolete and 36 as alien.

THE following important resolution has been passed by the Committee appointed by Section L (Educational Science) at the Newcastle meeting of the British Association: "That in order to secure freedom of action for teachers of science in schools, and to prevent the instruction from becoming stereotyped, it is undesirable for any external authority to prescribe a detailed syllabus in science for use in schools, whether intended as the basis of examinations or otherwise."

WE have received a prospectus of a new language school for missionaries in China at Peking, in the founding of which American and English missionary societies have combined. The Director, Mr. W. P. Pittus, is a strong advocate of modern methods. The institution of this school shows that missionaries are at last realizing the need for reform in this branch of their curriculum.

MESSRS. JACK announce the publication next month of the authoritative *Life of Theodore Watts-Dunton*. The whole of the correspondence and private papers have been placed at the disposal of the editors, Mr. Thomas Hake and Dr. Compton-Rickett. The former was an intimate friend of Mr. Watts-Dunton, and of Rossetti, Borrow, and Morris. All the great contemporary literary figures were friends and correspondents of Watts-Dunton, and the *Life* (which will be in two volumes, with portraits) will be one of quite extraordinary interest.

ROLL OF HONOUR.—Captain Keith Lucas, D.Sc., F.R.S., has died in consequence of injuries received while flying. He was a Fellow of Trinity College, Cambridge, and a gifted and promising physiologist. Others who have fallen are Captain G. Warre Cornish, Somerset Light Infantry, son of the late Vice-Provost of Eton; Captain E. J. Smith, Duke of Wellington's Regiment, Assistant Master at Nantwich Grammar School; Captain Edward Harris, of New Zealand, son of Archdeacon Chambers Harris, formerly Head Master of Christ's College Grammar School, New Zealand; Second Lieutenant H. D. Keigwin, Lancashire Fusiliers, formerly Director of Music at Trinity College, Glenalmond; Second Lieutenant G. E. Elliott, Duke of Wellington's Regiment, son of the Head Master of Rishworth Grammar School, Halifax, and Assistant Master at Wadham House, Hale; Second Lieutenant F. L. Henley, Sherwood Foresters, Assistant Master at Kilburn Grammar School; Second Lieutenant A. G. J. Alderson, Machine Gun Corps, Master of Sherborne School; Second Lieutenant John Handyside, Liverpool Regiment, Lecturer in Philosophy in the University of Liverpool.

THE governing body of the School of Oriental Studies, London Institution, have appointed Mr. Edward Denison Ross, C.I.E., Ph.D., to be Director of the school. Dr. Ross went to Calcutta in 1901 to be Principal of the famous Madrasah for Moslem Education, and during ten years there he greatly improved the school. For three years he was officer in charge of the records of the Government of India and an Assistant Secretary in the Education Department. He came home in 1914 to be Keeper of the Stein Antiquities in the British Museum, but soon after the outbreak of War was selected to organize the War Translation Bureau at the War Office. He will take up his work almost immediately.

THE John Curwen centenary will be celebrated by a festival service at St. Paul's on Saturday, November 4, at noon. The musical portion of the service will be rendered by a school choir of several thousand singers, conducted by Mr. Charles Macpherson, the Cathedral organist, and the address will be given by the Bishop of Barking. No tickets are required.

THE first autumn meeting of the Music Teachers' Association will be held on November 25, when Miss Eggar will lecture on "The Music of Our Future."

APROPOS of a Note on "Juvenile Delinquency," a correspondent informs us that a play centre in the Woolwich district, where she was assisting, was temporarily broken up by an effraction of young barbarians. It appeared that a gang of these had possessed themselves of a key to the iron gates and raided the classes at will.

THE REV. HAROLD A. P. SAWYER has been appointed to the Head Mastership of Shrewsbury School in succession to the Rev. C. A. Alington, and will take up his post at the end of the present

term. Mr. Sawyer was a scholar of Queen's College, Oxford, and took a Second Class in Classical Moderations and in the Final School of 1887. He was for three years a master at St. Dunstan's College, Catford; for eleven years at Highgate School, before his appointment to the Head Mastership of St. Bees School, where he has been since 1903.

At a recent meeting of the Governors of Bishop Auckland County School for Girls, Dr. Alexandra Fisher, M.A., D.Litt. (London), at present Head Mistress of the County Secondary School for Girls, East Dereham, Norfolk, was chosen out of 101 candidates to be Head Mistress in succession to the late Miss Ashworth.

THE Head Masters' Conference will hold their annual meeting at Rugby School at 2.15 p.m., on Thursday, December 21, and on Friday, December 22.

MR. JOSEPH EDWIN BARTON, M.A., Head Master of Wakefield Grammar School, has been appointed to the Head Mastership of Bristol Grammar School, in succession to Dr. Cyril Norwood, now Master of Marlborough College. Mr. Barton, who was born in 1875, was a scholar of Pembroke College, Oxford, where he obtained Firsts in the two Classical Schools and the Newdigate Prize for English verse. He was Head Master of the Crypt Grammar School, Gloucester, before going to Wakefield.

Two lectures will be given by the Rev. Father Nicholas Velimirovic, Professor of Theology in the University of Belgrade, at King's College, Strand, at 3 p.m., on November 4, on "Serbian Architecture and Poetry," and on November 11, "The Russian Democracy," in aid of the funds of W.E.A. For price of tickets apply to Mr. S. Furniss, 14 Red Lion Square, W.C.

SAFE NOVELS.

Salt and Savour. By Mrs. ALFRED SIDGWICK.
(5s. net. Methuen.)

Of course it is bad that salt should lose its savour. But a worse thing still may happen to salt. It may be used immoderately and produce a dish that nauseates. *Salt and Savour* is an English hymn of hate in the form of a novel. The shades of night, which are Germany, are peopled by caricatures of men and women, almost all of whom are wilfully insulting, vilely ill-mannered, and preposterously clothed; figureless if women, bull-necked if men. Fortunately the arch-villain—a Prussian officer, of course—is caught signalling from a London hotel during a Zeppelin raid which leaves the naturalized English girl, who married him for no conceivable reason save that the plot required it, free to marry the patient Englishman whom she loved from the beginning.

Olga Bardel. By STACEY AUMONIER. (5s. Methuen.)

This is apparently Mr. Aumonier's first novel, though not his first essay in fiction. There is no immaturity in the treatment or weakness in the writing. It is a sincere and thoughtful story of an artist's life, from her childhood in an obscure slum to middle age. There is humanity and understanding in this study, and a curious quality of beauty and strength arising from its directness and sincerity.

The Great Tradition. By KATHARINE FULLERTON GEROULD.
(5s. Methuen.)

All the stories in this volume are interesting. Two of them, the first and the last, are perfect. The balance of inner and outer is exquisitely achieved. In both a strong and joyful purpose to freedom, slowly unfolded during years of baffled life, is arrested on the wing of flight, and forced to droop again in bondage, never to soar "where that immortal garland is to be run for." To attempt a description of the plot would be an injustice, for the theme lives only in its treatment. But in both these stories, by a curious coincidence, an honourable escape is meditated from an unhappy married life—in one case by the wife, in the other by the husband. Only one story, *Leda and the Swan*, seems to be psychologically false; all are admirably written. We hope that another volume of Mrs. Gerould's stories will follow on this.

1914. By JOHN OXENHAM. (5s. Methuen.)

A story of the outbreak of war, in which scarcely an obvious detail is lacking. We have the girl studying in Germany brought home by her fiancé at circuitous length through Switzerland; war marriages between two suburban families; the German doctor and family friend caught red-handed among his wireless apparatus on the roof; the shirker who is making large war

profits. All the Germans commit characteristic atrocities; all the English, except the shirker, are patriots. The two young men who were married on the outbreak of war are kindly preserved; both suffer foul treatment at the hands of the Germans and are safe till the end of the War. The younger sons, who can be better spared, are killed instantaneously in each other's arms—a fact which the parents bear with extraordinary fortitude as they had "forecasted" it. One wonders how, at this date, such a superficial version will satisfy.

Redwing. By CONSTANCE SMEDLEY. (6s. Allen & Unwin.) This story is really about the growing-up of Mimsy, and the people she knew. Redwing, the most significant of these, gives his name to the book. He is the only child of distinguished and adventurous parents who have fallen into proud obscurity in consequence of the father's imprisonment for responsibility in a financial swindle. Mimsy, a girl of seventeen, goes as governess to Redwing, aged fourteen, and is herself educated by the proud, precocious, intellectual boy, with his unquenchable sincerity and strength, and merciless gift of analysis. This is only the beginning of Mimsy's adventures. She is an inspiration to many people, and particularly to a former lover of Redwing's mother, who tries in vain to marry her. It is only on the last page that Redwing claims her. There are some false notes in the story, but it is well written, and shows some really interesting character study. We must congratulate the publisher on the effective design and colouring of the paper cover, a thing most rare.

The Vermilion Box. By E. V. LUCAS. (5s. net. Methuen.) These letters, written between the later part of 1914 and the middle of the present year, exhibit most of the rare gifts which have made Mr. E. V. Lucas a familiar name in the literature of the day. Had he lived in the eighteenth century he would have given us, not one volume that may be read in a long winter afternoon, but a dozen that Macaulay himself would have taken a week to devour; but in these days of storm and stress, when few, if any, have "leisure to be wise," he is content to provide his readers with a guide to the characters, and plunge them *in medias res*. None of the letters is dated, and there is a lack of gradation. Mothers are gradually reconciled to the enlistment of their sons, and the sons develop more serious qualities, though preserving to the end the frolic temper of the public-school boy; but the changed aspect which the two fateful years have wrought on English society is barely indicated. Richard Haven, the shrewd and sober bachelor uncle, who acts as the consulting barrister of the family, is an admirable portrait, and the romance is supplied by two sporting advertisements inserted in the *Times* by "Lonely Subalterns," with two marriages, and a V.C. as a finale. Mr. Lucas gives us, as he promises, a glimpse at "the social life of England during the War," and he amply fulfils his promise. It would be ungracious to complain that of the working multitude—the toilers in schools and colleges, in the factory, and on the farm—we hear nothing.

COLONIAL AND FOREIGN NOTES.

UNITED STATES.

We return to the meeting (mentioned in our last number) of the National Education Association at New York. "Preparedness" is foremost among current topics in the United States. Last year the Association declared emphatically against military training in schools; this year, whilst recognizing the right of States and communities to prescribe it, the Associates laid down that it must be subordinated to the real mission of the school. Of the resolutions in which their opinions were formulated the seventh runs thus:—"Resolved, That the National Education Association gives expression again to the consciousness that the school is an institution developed by society to conserve the wellbeing of humanity, and that on this solid foundation all subordinate aims and uses of the schools should be made to rest. Assembled as it is in a time of worldwide disturbance, doubt, and uncertainty, and of consequent national concern, the Association affirms its unswerving adherence to the unchanging principles of justice between persons and between nations. It affirms its belief that the instruction in the school should tend to furnish the mind with the knowledge of the arts and sciences on which the prosperity of the nations rests, and to incline the will of men and nations towards acts of peace. It declares its devotion to America and American ideals, and recognizes the priority of the claims of our beloved country on our property, our minds, our hearts, and our lives. It records its conviction that the true policy to be followed, both by the school and by the nation which it serves, is to keep the American public school free from sectarian interference, partisan politics, and disputed public policies, so that it may retain unimpaired its power to serve the whole people."

The N.E.A. on Military Drill in Schools.

While it recognizes that the community or the State may introduce such elements of military training into the schools as may seem wise and prudent, yet it believes that such training should be strictly educational in its aim and organization, and that military ends should not be permitted to pervert the educational purposes and practices of the schools."

The Department of Science Education was agreed that science teaching in schools should be reorganized, but discordant as to the methods and extent of reorganization. It is, however, in the general Resolutions of this representative body of American schoolmen that English readers will take most interest. They included one creating a committee to ask President Wilson to appoint a Commission of Five to investigate and report upon the condition of woman on the farm and in the rural home; one urging an appropriation of 50,000 dols. to disseminate information concerning the education of immigrants; one favouring woman suffrage, and one making the following significant demands:—1. The powers and duties of Superintendents of Schools should receive definition by legislative enactment; definite professional qualifications should be required of all appointees to office. The term of the Superintendent of Schools should be not less than three years; the power of nominating all teachers and members of the education staff should be given to the Superintendent. 2. The tenure of office of teachers should, after a probationary period, be permanent. Removal should be possible only for inefficiency, immorality, or grievous neglect of duty. Salaries should be fixed so as to ensure to teachers a standard of living in keeping with the professional demands made upon them. Retiring allowances or pensions should be provided either by State or local action.

Security of tenure is as urgently needed in the United States as in England, of which statement the case of the Chicago teachers may be adduced in evidence. Last autumn it was proposed to dismiss teachers who belonged to the Chicago Federation of Teachers, a trade union associated with the National Federation of Labour. Courts of Law put a veto on the proposal. Lately the School Board arbitrarily dismissed sixty-eight teachers, most of whom had been employed in the schools for many years. The party on the Board led by President Loeb asserted that this action was taken in order to get rid of incompetent and insubordinate persons. Now since it was admitted that forty of the cast-off teachers were "good, superior, or excellent," these at least must have been discharged for insubordination. Thirty-eight of them had been active members of the Federation, their connexion with which was clearly the head and front of their offending. Formerly Chicago teachers could expect continued tenure of office if they had not been charged with inefficiency during the previous year; according to the precedent now set, all of them are dependent on annual election. We incline to the opinion that, the teacher being something more than a working man, the affiliation of a Teachers' Union to a Labour Union is inadvisable. The summary dismissal of teachers who think otherwise is a high-handed proceeding—a blow that reaches the children and recoils on the State.

In the old days—of to-day we elect to be mute—teachers of English in England were men or women incapable of teaching either classics or mathematics. Teachers of English in the United States have asserted their rank and their unity, having a National Council and an official organ, *The English Journal*, published by the University of Chicago Press. The National Council of Teachers of English held a special meeting at New York during the sitting of the N.E.A. In the discussions stress was laid on the advantage of separating the instrumental elements of English instruction from the æsthetic, and on the need of agreement as to the essentials of grammar and composition. A resolution was passed which demanded for the English classroom an equipment including a mimeograph, a duplicator and supplies, stereopticon, curtain and slides, a projectoscope (to take postal cards), an unabridged dictionary on stand, a lantern to throw on a screen a page of written composition, pictures, a victrola and educational records, rugs, potted plants, vases and busts. The old-time teacher, whose qualification was ignorance, would have wondered what use could be made of these strange implements. American teachers, we observe, continue to urge the importance of oral composition, neglected because examinations impose only written exercises.

The General Education Board (a private body) announces that it will complete the examination—in which educational experts have already been for five months engaged—of the Gary system, and will issue the results in a comprehensive volume. Again, seeing that, whilst much labour has been given to the devising of special education for defective children, little scientific attention has been paid to those of unusual talent; the Board has made an appropriation to Prof. Guy M. Whipple of the University of Illinois, to enable him to study certain questions relating to these—how soon in life they may be

Some Work of the General Education Board.

discovered, how their energy may be best employed and their time economized, what the school can do for them more than for the average child. Lastly, there is in the United States a movement in favour of the Junior High School, which comprehends the seventh and eighth grades of the elementary school and the lowest of the present high school. [But see more in *Educational Administration and Supervision*, ii, 7.] The Board has resolved to investigate the curricula, methods of teaching, and results obtained in the Junior High Schools now in operation. The inquiry will be conducted by Prof. Thomas H. Briggs, of Teachers College, Columbia University, New York.

GERMANY.

In France, in the United States, in England, and elsewhere, the War has set many inquiring what the education has been that made the Germans German. Let us report objectively what they themselves have to say on the subject. The year in which the War broke out happened to be the centenary of the death of Fichte, the philosopher who yielded so much formative inspiration to Germany, and *Pädagogisches Archiv* (LVI, 1) published then an article, "J. G. Fichte als Schöpfer des modernen Erziehungsideals" (J. G. Fichte as Creator of the Modern Educational Ideal), by Oberlehrer Dr. Polykarp Hauck, of Essen a.d.R. The matter of the article may be recalled instructively.

According to Fichte, the essence of man is his free deed, his freedom—his free deed done in an external world not free, but controlled by the chain of causation. It is the individual that creates humanity, that is to say, free activity. But in his conception of the individual (*Individuum*) Fichte went a step beyond his predecessors. For them the *Individuum* was a single person; he, impelled by the circumstances of his time, became the discoverer of the Nation, of the people as a necessary *Individuum*. He could find only one people that was a real *Individuum*, namely, the German, all others having lost their original and characteristic natures. The German people alone had still its character and personality. It had kept its language as a witness to its individuality. In the hour of its peril it became plain what a loss to mankind its destruction would mean; for the ideal of humanity would remain unrealized if the German people could not realize it. All other nations were Epigoni; they had taken over the language of antiquity, and so also its circle of thoughts and its intellectual limitations. None but the German could safely appropriate antiquity and build anew from it, because the German had retained with his own language his original mode of thought.

To promote humanity (*humanitas*, in Fichte's sense) or free activity is, then, the task of a definite people, upon which lies the duty, not to be repudiated, of preserving and diffusing among its members a receptivity for *humanitas*. This can be effected only by a suitable education. The aim of this education is *die Bildung des Menschen zum Menschen*, the forming of a man into a man—into one who makes use of his freedom and brings into play his higher nature. The means will be to accustom a child to observe the fundamental law of his nature, freedom. This can be done only through the use of freedom—through true self-activity. The acquisition of knowledge is *subsidiary* and an effect of continued intellectual activity.

So may be condensed Dr. Hauck's able article. We content ourselves with the briefest commentary. Education through self-activity is the cry of most modern reformers. That the end is free action, bodily and mental, not knowledge, is a noble and imperishable thought! The enlargement of the idea of the *Individuum* forms the basis of that subordination of the individual to the State (the Nation in its executive capacity) with which German education is continually reproached, as by M. Emile Boutroux: "elle travaille à former, non des hommes, mais des instruments"; the State having the mission, the men are its tools. Nationality is not a closed circle. Nations perish, after having lived spiritually by an exchange of cultural elements. The doctrine that there is any One, or Chosen, nation all history has shown to be absurd. A belief in it did not save the Hebrews from dispersion—a belief in it has to-day cost Germany her colonies, her seaborne trade, and the flower of her manhood.

FRANCE.

To commemorate the historic day, August 4, 1914, when Britain declared her solidarity with France, a Comité de l'Entente Cordiale was formed. This committee, consisting of eminent persons, changed its name soon afterwards to Comité franco-britannique. Its object is no longer merely to celebrate an anniversary, but to draw closer the bonds which "unissent dans l'héroïsme et qui uniront dans la victoire les deux grandes nations voisines désormais inséparables." Illustrious names give it sanction. With one of the sections we are concerned—the Section littéraire et pédagogique, over which M. Alfred

Croiset, Doyen de la Faculté des Lettres de l'Université de Paris, presides. To unite the two nations mutually in the study of language and institutions will be found to be as efficacious a means as any reciprocity of trade.

CEYLON.

The new Report covers the period from January 1 to December 31, 1915, and naturally exhibits some results of the War, which caused the opening of new buildings to be delayed and drew children prematurely from school owing to the need of economy on the part of their parents. In 1914 the number of pupils in the schools of Ceylon was 385,334; in 1915 it was 384,533—a decrease of 801, the loss being in Grant-in-aid and Unaided, not in Government, schools. Our interest in the education of girls is lively and we look to see how they are faring in Ceylon. The total number returned of those attending Government and Aided Schools was 109,779, which made an increase of 2,642 for the year. In Unaided Schools, moreover, there were 8,602 girls; so that, in all, it is computed that 39 per cent. of the girls of school age were receiving instruction. According to a New Code those in secondary schools had to take lessons in domestic science, and so in elementary experimental science; but the War hampered the supplying of them with chemicals and apparatus! Ceylon girls, when they sew, will, it seems, wear a thimble without using it; in the villages they let the clothing be made by a man, except when it is necessary to show the Inspector what can be done. We observe with pleasure that drill is taught in all the Government Schools of Ceylon, and that physical training is compulsory in all Aided secondary schools.

A little picture of a "religious difficulty" is interesting. The Tamil class in the Government Training College having been closed, Hindus had no longer the opportunity of training themselves there, and difficulties stood in the way of their establishing an institution of their own. A conference was ultimately held, at which representatives of the Education Department, of the Christian Missions, and of the Hindu community were present. It was proposed to organize in the Jaffna district a joint institution, the Hindus being granted a share in the management, and Hindu students allowed to attend lessons on the theory and practice of teaching and in non-religious subjects. The Catholics, while willing to admit Hindus to the secular lessons at their own institution, were not willing to unite in carrying on a joint institution. The other three Christian bodies—viz., the Church Missionary Society, the Wesleyan, and the American Mission—and the Hindus were ready to make an attempt at working in concert. A joint Training School, situated in the Church Missionary compound at Copay, will, as it is hoped, be at work in the present year.

UNIVERSITIES AND SCHOOLS.

OXFORD AND CAMBRIDGE DURING THE WAR.

The Universities are now beginning their third academical year of the War. Every term the process of "carrying on" becomes more difficult and seems more unreal. It was said of a former Principal of a Scotch University that he would think the University perfect if only there were no undergraduates. Oxford and Cambridge are rapidly approaching that blissful state, but none can pretend that they like it. There are about 450 undergraduates at Cambridge this term, and about the same number at Oxford. If they could be got together into one or two colleges in each University, they would make respectable societies, with some life and character of their own, but there is no prospect of that being done. All colleges are now run by a small minority of the usual governing body; the young dons are, of course, away on military service, many of the others are working in Government offices, and the remnant are getting on in years, and often immersed in keeping up little bits of administrative work for those who are away, and no such revolution as that of making many fragments of colleges into one college is to be expected from them. Properly, no doubt, the colleges should give place to the University and the Universities grapple with the problem of their changed conditions themselves. Serious consideration might then be given to the question whether it is worth while keeping up the Universities for the sake of a few invalids and visitors from abroad. Perhaps it is, perhaps it is not; but, as things are, the Universities are not asked to face the situation. The colleges go on making arrangements with their members for terms ahead, secure in the view that a lion with only a very little kick left in it is better than a live dog. The Universities have to make the best of it, and there is not really much ground for complaint. Whatever some may think of

Universities, there is no doubt that colleges cannot be expected to flourish without undergraduates, and we need not forget the advantages of the college system because its skeleton is bony. Our abandoned state, for we all feel that we are abandoned, is evidence of how largely we are teaching Universities. For, if the business of a University is to produce learning or research, there is much to be said for an academic life untroubled by pupils. Those that are left might be engaged in "settling *tri's* business" and other such pursuits. I doubt if anyone in either University has cultivated such detachment from the fortunes of his pupils and of his country. The scientists have, many of them, their research work for Government; the doctors have, unfortunately, only too much to do in the Army hospitals; but the members of other faculties who remain are busy mainly in tying up the little ends of college business that are always coming undone, and discussing what changes we shall make when the young men come back and we have a University again. There were no less than three conferences on Education in Oxford in August, and discussion is not confined to conferences. It will be very interesting to find, after the War is over, whether compulsory Greek and all the other last ditches of before the War will be as stubbornly defended as ever. Cambridge has apparently found a way of dodging compulsory Greek for those who have been serving, but that will not take us very far. Compared with the changes that may be wanted, the abolition of compulsory Greek is as nothing. Will the Universities be ready to meet the altered circumstances, or will they use the splendid services that their members have rendered to their country as an argument for opposing all change?

Leaving these remote speculations, there is a more immediate problem which grows more acute the longer the War lasts. What are the Universities to do for the large number of men who went to the War in the middle or the beginning of their course? They have already given most of them a degree, but they will have to think of giving them some education as well. Men will not be able to take the full course as they would ordinarily have done, but they will many of them want some period of training before they take up their profession. How are the Universities going to provide for them? Men's needs will be very various, and no University scheme is likely to be sufficiently elastic. The question is being taken up by the different faculties. It might well be tackled by combinations of colleges.

In the meantime, Oxford and Cambridge are still great educational centres. Lecture rooms and college halls are full, and most college rooms have four occupants instead of one. If I were to give elaborate details of these new educational centres which are in the Universities but not strictly of them, I might come under the operations of the Defence of the Realm Act. It is, however, common knowledge that most of the colleges in both Universities are now the home of Cadet Battalions or other Army schools of instruction. The War must have made all educationists realize that the Army is one of the greatest educational forces in the country. In the last two years the Army has given more instruction than all the educational institutions in the country put together, and almost all University men, Scholars and Fellows of colleges included, have undergone instruction at its hands, done its examinations, and been told how to take notes, even had their notebooks inspected. Army methods of teaching are not pedagogically perfect, but they are very different from the ordinary methods of Academic teaching, and their differences are sometimes instructive. It will be interesting to see how far they will leave their trace on the University after the War. In any case, while mourning the ancient Fellowship, whose ranks are daily being thinned in all parts of the world, it is some consolation to see the members of this "temporary" University sitting about in the Quad, or enjoying their scanty leisure on the river. They form a University whose course is, indeed, the shortest, but which, nevertheless, is more democratic and more truly representative of the nation than any University that there has been at either Oxford or Cambridge for many a long day.

CAMBRIDGE TRAINING COLLEGE FOR WOMEN.

Scholarships for September have been awarded as follows:—The Gilchrist Scholarship of £30 to Miss D. K. Jewell, B.A. Bristol (Honours, History, Class I); College Scholarships of £25 and £20 respectively were awarded to Miss D. Sutcliffe, B.A. Leeds (Honours, History, Class I), and Miss E. E. Bearsley, M.A. Aberdeen (Honours, English, Class I). A Bursary was also awarded to Miss M. Herbert, B.A. Leeds (Honours, History, Class II).

COLOUR CHEMISTRY AT LEEDS.

The national urgency of the need for scientific research in colour chemistry and dyeing has led the University of Leeds, acting on the advice of its Textile Industries and Dyeing Committee, to re-organize upon a larger scale its Department of Colour Chemistry

and Dyeing, which was endowed by the Clothworkers' Company of London. The staff of the Department will now be as follows:—

1. Mr. Arthur G. Perkin, F.R.S., F.R.S.E., F.I.C., Professor of Colour Chemistry and Dyeing and Head of the Department. Mr. Perkin comes of a distinguished scientific family, being a son of the late Sir W. H. Perkin, the discoverer of the aniline dyes, and brother of Prof. W. H. Perkin, of Oxford. He has for many years rendered distinguished service to science while Lecturer and Research Chemist in the University of Leeds, and possesses an extensive colour works experience, having been for six years senior chemist and for four years manager of the Alizarine Works of Hardman and Holdens, Manchester.

2. Dr. J. B. Oesch, Ph.D. Zurich, a well known Swiss chemist, will in future be in charge of the laboratories of colour chemistry. He was for many years a colour chemist in one of the chief Continental factories, and has made important contributions to the chemistry of his subject.

3. Mr. G. H. Frank, M.Sc., F.I.C., remains for a further period in charge of the Experimental and Practical Dye Houses. Mr. Frank is an experienced research chemist, whose work in the past has added largely to the success of the department.

4. Mr. P. King, formerly a student at the Yorkshire College, has for several years been chemist to Messrs. Courtaulds, Ltd., Braintree, Essex. At the request of the University, he has obtained permission from his firm to leave their service in order to take up teaching work in the department. Mr. King, who has extensive dye-house experience, will be subsequently in charge of the Experimental and Practical Dye Houses.

5. Lieutenant A. E. Woodhead, M.Sc. Lieutenant Woodhead has been relieved by the War Office from military duties elsewhere, in order to act as Commanding Officer of the Leeds University Officers' Training Corps, which will now be reopened in accordance with the recent Army Council regulations.

In addition to a course of systematic instruction, the University desires to give its students an opportunity of hearing at first hand from technical chemists of eminence some account of the work in which they are specially engaged. The University feels it a privilege to have obtained as external lecturers for the coming session the following well known technologists:—

6. Mr. C. F. Cross, B.Sc., F.I.C., of Messrs. Cross & Bevan, the well known authority on cellulose and the cellulose industries, discoverer of viscose. Mr. Cross will give a special course of lectures on "Cellulose in relation to the Textile and Paper Industries," and on "Cellulose Derivatives and their Industrial Application."

7. Mr. H. P. Hird, of Messrs. Hird, Chambers, & Hammond, Huddersfield, specialist in the distillation of coal tar, will give a special course of lectures on "The Methods of Coal Tar Distillation."

8. Prof. E. R. Watson, M.A., D.Sc., Professor of Chemistry at Dacca University, India, is well known for his contributions to the chemistry of colouring matters. Prof. Watson, who is on leave from India, will give a special course of lectures on "Colour and its Relation to Constitution."

The University is now in a better position than ever to render help to the whole of the dyeing and colour-making industries of the country. It is gratified to have been able to comply with the request that it should provide laboratory accommodation for the use of a staff of chemists working on behalf of British Dyes, Ltd. The work of these chemists will be done under the general supervision of the Professor, and will be exclusively in charge of a member of the University staff. The University welcomes the opportunity of co-operation with this large and important factory in carrying out the national purpose for which it has been created and subsidized by Parliament.

The following gentlemen are members of the Textile Industries and Dyeing Committee of the University of Leeds:—Mr. Joseph Lowden (Chairman), the Pro-Chancellor (Mr. A. G. Lupton), the Vice-Chancellor (Mr. M. E. Sadler), Mr. H. E. Aykroyd (Bingley), Mr. Alfred Barran, Mr. J. G. Chadwick, Mr. Francis Davis (Halifax), Mr. George Garnett (Apperley Bridge, Bradford), Mr. Percy Gaunt (Farsley), Mr. J. F. Greenwood (Haworth, Keighley), Mr. Fred Kinder, Mr. Herbert Kitchen, Dr. A. Liebmann (Weybridge), Sir W. H. Marling, Bart. (Stroud), Mr. Oliver Marsden, Mr. Jonathan Peate (Guiseley), Mr. Rufus D. Pullar (Perth), Mr. J. Harold Smith, Prof. A. Smithells, F.R.S., Mr. Marshall Stables, Mr. Jeremiah Whitaker (Burley-in-Wharfedale), Mr. John R. Willans, Mr. C. J. Wilson (Hawick).

SCOTLAND.

At a recent meeting of the University Court, the Principal announced that Mr. William Weir, of Glasgow, who represents the Ministry of Munitions in Scotland, has given to the University a sum of £2,500, for

Glasgow.

the purpose of maintaining a Lectureship in Russian. The gift will provide an adequate stipend for five or six years. The lectureship will have an important place in the scheme for establishing a Russian Institute in Glasgow, which is being promoted by the Lord Provost, in co-operation with the University, the Athenæum Commercial College, the Chamber of Commerce, and other institutions. It is proposed that the University Lecturer should also be the Chief Lecturer at the Commercial College, that there should be a bureau for providing information on all matters concerning intercourse with Russia—e.g. trade, finance, travel, openings for enterprise, employment, law, economic conditions, credit, banking, &c., and that travelling scholarships of £150 a year should be established, on the lines of the proposed Kitchener Scholarships, to enable young business men and other students to reside for a year in Russia, after having received the necessary instruction in the Russian language, &c. The scheme of the Institute, which has been very carefully considered, is most comprehensive and full of promise. The annual cost will probably be between £2,000 and £3,000, and it is expected that an appeal will presently be made to the people of Glasgow and the West of Scotland to provide the money. Since the end of September the D.S.O. has been awarded to three Glasgow graduates, one of whom is a son of Prof. Sir Henry Jones, and nineteen former students and graduates have received the Military Cross. A second issue of the University "Roll of Service" has appeared. It contains the names of 2,243 commissioned officers, 151 non-commissioned officers, and 412 privates. The casualties recorded are: Killed, 165; wounded and missing, 5; wounded, 160; missing, 5; prisoners of war, 4. The comparatively small number of wounded is doubtless due to the difficulty of tracing all the cases. Two have been awarded the Victoria Cross, thirteen the D.S.O., and thirty-eight the Military Cross, in addition to those already mentioned. Several men have also received French, Russian, and Serbian decorations, and 108 have been mentioned in despatches. Mrs. Gwynne Vaughan, widow of Prof. D. T. Gwynne Vaughan, has presented to the University her husband's collection of over two thousand anatomical slides. There is probably no collection of like quality in existence.

At the opening of the Winter Session of the University, sixty students enrolled in the German classes, the largest number since the institution of the Lectureship in German. It may safely be said that

Aberdeen.

this is due, not to any pro-German feeling, but to Aberdonian intelligence and foresight. The General Council has resolved not to proceed with the election of two Assessors to the University Court, but to ask the Secretary for Scotland to make an Order continuing in office for another year the present Assessors, and empowering the University Court to deal with any casual vacancy during that period. The Council also, on the understanding that the Preliminary Examinations Ordinance has been withdrawn, resolved to request the University Court to reconsider the recognition of an appropriate school certificate as a normal channel of entrance to the University in any Faculty, the University to reserve the power to demand proof of proficiency in any subject before admitting to the classes in that subject.

The number of matriculated students in 1915-16 was 1,811 (1,330 men and 481 women). The number in 1914-15 was 2,415; and in 1913-14, 3,282. The number of women medical students has increased

Edinburgh.

from 78 in 1913-14 to 146 in 1915-16. Up to October 16 in the present year, 176 women have matriculated in Medicine, the highest number in any one year. The "Roll of Service" now contains 4,986 names, including those of 460 O.T.C. Cadets preparing for commissions. The total number of commissioned officers is over 3,400. The number of those who have been killed or died of wounds is 211. The distinctions which have been awarded include: D.S.O., 20; Military Cross, 54; Distinguished Service Cross, 2; D.C.M., 2. Ten have been honoured by our Allies, and over one hundred have been mentioned in despatches. The new hostels for women students, provided by the Carnegie Trust (for the University) and the Education Department (for the Provincial Committee) have now been opened. The hostels are already well filled, and only a few of the places reserved for University students remain unoccupied. The cost of the three blocks of buildings, which have so far been erected, is between £50,000 and £60,000. The fee for board-residence is £1 per week.

The number of students in attendance at the College has decreased since 1913-14 by almost 50 per cent., and there has been a corresponding decrease in the revenue from fees. The College has been doing a great deal of work for the Government in the departments of Chemistry, Metallurgy, and Engineering. The "Roll of Service" contains 2,180 names, and the honours conferred include two Victoria Crosses, one D.S.O., and twenty Military Crosses, as well as several other medals and decorations.

Royal Technical College, Glasgow.

IRELAND.

The opening of the academic year in University College, Dublin, was celebrated, as usual, by High Mass in the University Church in St. Stephen's Green on Sunday, October 22. Dr. Walsh, the Roman Catholic Archbishop of Dublin, presided, and a large number of professors and students attended. An appropriate sermon was preached by the Rev. P. Walsh, M.A., Dean of Residence.

The National school teachers have been carrying on an active campaign during the month to secure a War bonus on their salaries. As the starting salary of a male teacher is 23s. 4d. per week, and out of the 13,000 teachers in the country over 5,000 receive that sum and only a few hundreds have salaries amounting to 50s. a week, in view of the fact that the cost of living has increased some 60 per cent. since the War began, the demand does not seem unreasonable. A public meeting was held in the Mansion House in Dublin at the beginning of the month to state the teachers' case, followed by meetings in Belfast and elsewhere. A good many were of opinion that the teachers should agitate for a permanent increase of salary, and not merely a War bonus. The teachers' demand was supported by resolutions passed by the Board of Education of the General Assembly of the Presbyterian Church in Belfast, and by the Diocesan Synods in a recent meeting in Dublin. Dr. Bernard, the Archbishop of Dublin, who presided at the Synod meeting, said that he believed the day was coming when a schools rate would have to be levied in Ireland as in England; it was hopeless to expect the Treasury to do more at the present crisis, when the national resources were so heavily taxed. Dr. Bernard professed himself one of those who thought that the National Board system was a very good system, and he doubted if the teachers would be much better off by a change of paymasters.

Subsequently a deputation from the National School Teachers' Association waited on the Chancellor of the Exchequer in London to lay their claims before him. It is now reported that the Government have decided to grant a bonus of 4s. a week for those in receipt of a salary not exceeding £100, and 3s. a week for those with a salary of over £100, with half rates for women.

This decision has not met with general satisfaction, and meetings have already been held in Belfast and elsewhere to protest against it, on the double ground that the bonus is inadequate and that it differentiates unfairly between men and women. Out of nearly 10,000 members of the organization, one-half are women, and if their Central Executive Committee insists on equal treatment for men and women, as was suggested at a meeting of the Birr Teachers' Association the other day, there ought to be some chance for the women teachers to enforce their claims.

The question of the loyalty of National school teachers still continues to be discussed in some quarters. In an article in this month's *Blackwood's Magazine*, Dr. Mahaffy, the Provost of Trinity, returns to the attack, and declares that the National schools have been, and are still being, largely used to foment disloyalty; the great majority of them are managed by priests, a considerable number of whom are *Sinn Féiners* and a still larger number afraid of that organization.

Accusations of disloyalty, however, are very easily made, especially in an atmosphere so charged with passion and mutual distrust as that in which we live at present. Some little stir was created recently by the report which appeared in the *Irish Times* of the meeting (already referred to) of the National Teachers' Association in the Mansion House, to press for a War bonus. One of the speakers, Father Byrne, who spoke of the "fine young fellows who were now at the front gaining glory for their country," was (according to the report) received with hisses and interruptions. This statement, which drew forth, of course, a good deal of comment unfavourable to National teachers, was contradicted in a letter to the Press written jointly by Prof. Culverwell (the Chairman) and the Rev. Denham Osborne (a speaker at the meeting), who declared that Father Byrne's words had been received with "loud and general applause," and that a slight indication of dissent, coming from a few men at the back of the hall, was not necessarily to be set down to the National teachers, as the meeting was a public one and open to all comers.

The scheme which has been adopted in Belfast of giving higher grade certificates on examination results to pupils leaving National schools, seems to be working satisfactorily; at the examination in June, 615 pupils were sent forward for the examination, of whom 499 passed, 198 with honours. The Post Office authorities are giving preference to those who have the higher grade certificate, and the Technical Institute accept it in lieu of examination for entrance to trade classes.

Temperance reformers are working a movement to have temperance teaching made a compulsory part of the program of National schools. The Catholic Total Abstinence Federation, in its annual meeting held in the Mansion House, and some of the

Diocesan Synods have been urging the step, and it is understood that a deputation has been sent to Dr. Starkie, the Resident Commissioner, on the subject.

STUDENTS IN CAPTIVITY.—The first meeting of the newly formed Committee for the management of the British Prisoners of War Book Scheme—a War Charity hitherto carried on by Mr. A. T. Davies at the offices of the Board of Education, but now being registered under the War Charities Act, 1916—was held on September 22 at Whitehall. A letter was read from the Marquis of Crewe, President of the Board of Education, expressing his appreciation of the work done in the past and of the invaluable services which the organization could render to British prisoners of war by giving them the opportunity of developing serious interests in different directions during the hard and dreary months of their detention. A gratifying report was read from the Principal Examiner to the Board of Trade (Marine Department) on the result of the recent examinations held at the Camp at Groningen in Holland. Nineteen candidates presented themselves for examination for the second mate and other certificates, and all passed, in a highly creditable manner, a searching examination, a fact which, the Principal Examiner stated, bore eloquent testimony to the value of the opportunities for self-improvement afforded at the Camp. As a result further classes are now being formed at Groningen for candidates for certificates of competency in the Mercantile Marine. Evidence is also coming to hand from Camps as far distant as Asia Minor of considerable development in the organization of educational work among the men interned there. From these Camps a continuous stream of applications for books for serious study was reported to the Committee, who expressed the hope that the public will continue, by offers of suitable books (new or secondhand), to support a War Charity the need for which was daily becoming more and more evident. Further particulars respecting this War Charity and its work can be obtained on application to Mr. A. T. Davies, at the Board of Education, Whitehall, London, S.W. All communications should have the words "Prisoners of War" written in the left-hand corner of the envelope.

PRIZE COMPETITIONS.

A Prize of Two Guineas is offered for the best translation of the following passage from Alfred de Vigny :—

Quatre-vingt-quatorze sonnait à l'horloge du dix-huitième siècle, quatre-vingt-quatorze, dont chaque minute fut sanglante et enflammée. L'an de terreur frappait horriblement et lentement au gré de la terre et du ciel, qui l'écoutaient en silence. On aurait dit qu'une puissance, insaisissable comme un fantôme, passait et repassait parmi les hommes, tant leurs visages étaient pâles, leurs yeux égarés, leurs têtes ramassées entre leurs épaules, reployées comme pour les cacher et les défendre. Cependant un caractère de grandeur et de gravité sombre était empreint sur tous ces fronts menacés et jusque sur la face des enfants ; c'était comme ce masque sublime que nous met la mort. Alors les hommes s'écartaient les uns des autres, ou s'abordaient brusquement comme des combattants. Leur salut ressemblait à une attaque, leur bonjour à une injure, leur sourire à une convulsion, leur habillement aux haillons d'un mendiant, leur coiffure à une guenille trempée dans le sang, leurs réunions à des émeutes, leurs familles à des repaires d'animaux mauvais et défiants, leur éloquence aux cris des halles, leurs amours aux orgies bohémiennes, leurs cérémonies publiques à de vieilles tragédies romaines manquées, sur des tréteaux de province ; leurs guerres à des migrations de peuples sauvages et misérables, les noms du temps à des parodies poissardes.

Mais tout cela était grand, parce que, dans la cohue républicaine, si tout homme jouait au pouvoir, tout homme du moins jetait sa tête au jeu.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners will be required to send real names for publication.

All competitions must reach the Office by November 15, addressed "Prize Editor," THE JOURNAL OF EDUCATION, 3 Broadway, Ludgate Hill, E.C.

Teachers Registration Council

Representative of the Teaching Profession
(Constituted by Order in Council, Feb. 29, 1912).

In accordance with the above-mentioned Order, a
REGISTER OF TEACHERS
is now maintained by the Council.

For information apply to The Secretary,
Teachers' Registration Council,
47 BEDFORD SQUARE,
London, W.C.

For a Select List of
**HOSTELS FOR TEACHERS,

VENUS PENCILS

"ECONOMY IN SCHOOL SUPPLIES."

THIS is the
title of a
Booklet which
every Teacher
should possess.
It illustrates
and describes
the famous
"VENUS"
Perfect Pencils,
price 4d. each,
3/6 per dozen.

Made in seven-
teen grades,
6B to 9H (and
in three styles
of Copying
Ink); "Vel-
vet" 2d. and
"Forum" 1d.
Pencils;
"Alpco" Pas-
tels, Erasers,
&c.

Copy of this Booklet and samples of the above lines
will be sent free to applicants. Please mention name of
School, and to avoid delay quote Department number.

"VENUS" (Dept. 54), 173-5 Lower Clapton Rd., N.

GIRLS' SCHOOL TRANSFERS AND PARTNERSHIPS.

Messrs. GABBITAS, THRING & CO., 36 SACKVILLE STREET, LONDON, W.,

have a large number of **GIRLS' SCHOOLS** on the books of their Transfer Department, but **ISSUE NO LIST.**

On learning a Purchaser's qualifications and requirements, they will send to her notices of opportunities likely to suit her. The following are examples of the Schools now on their books:—

No. **TRANSFER** of old-established Middle-class Boarding and Day School near London. 88 Girls. Gross receipts about £1,000. Rent £112. About £250 required.

No. **TRANSFER** or **PARTNERSHIP**. Boarding and Day School of the highest class, in the West End of London. Old-established, and giving a very good return. £800 to £1,000 capital required.

No. **TRANSFER** or **PARTNERSHIP**. High-class Girls' School in healthy Suburb of London. Accommodation for several more Boarders. Very little capital required. Percentage of receipts term by term accepted for goodwill.

No. **TRANSFER** of Boarding and Day School in a healthy suburb of London. 41 Girls, of whom 5 are Boarders. Gross receipts about £1,600. Very moderate sum accepted for goodwill.

No. **TRANSFER** of well-established and successful Day School of the highest class, in one of the best parts of **THE WEST END OF LONDON**. Principal retiring for personal reasons. Only £500 Capital required. Part of this might be left over.

No. **TRANSFER** of exceedingly flourishing Boarding and Day School in the Southern Midlands. Gross receipts over £3,000. **NET**

PROFIT ABOUT £1,000. 70 Boarders and 50 Day Girls. Very suitable for two ladies to take over in Partnership.

No. **TRANSFER** of old established and successful Boarding and Day Private School for gentlemen's daughters, in the West of England. Between 60 and 70 girls, 20 of them Boarders paying up to 54 guineas per annum. **GOOD PREMISES**, standing in 3 acres of grounds. Only £500 required for goodwill.

No. **TRANSFER** of old-established and successful Boarding and Day School in a healthy residential locality near London. 49 girls. Gross receipts for the last year £2,790. Net profit £800. House stands in 4 acres of grounds.

No. **PARTNERSHIP** in one of the best-known Finishing Schools, of the highest class, near London. Between 40 and 50 girls. Fees up to 120 guineas. **MAGNIFICENT PREMISES**, standing in 36 acres. Partner need not invest more than £1,000.

No. **TRANSFER** or **PARTNERSHIP**, with a view to Succession. **SMALL HIGH-CLASS FINISHING SCHOOL**, close to London, in a fine house, with over 3 acres of beautiful Grounds. Accommodation for 24 Boarders; at present contains 10. Suitable for a lady **WISHING TO MOVE**, or with a **GOOD CONNEXION**.

No. **PARTNERSHIP**, suitable for a **WELL-QUALIFIED MISTRESS**, in Boarding School at **EXCEPTIONALLY BEAUTIFUL SPOT** on the South Coast. 35 Boarders. Prospectus fees 90 guineas per annum, many paying considerably more. From a well qualified partner, especially with a little general connexion, **LARGE CAPITAL NOT REQUIRED**.

No. **TRANSFER** of first-rate Boarding School of highest class, near London. Magnificent premises. Over 40 Girls. Gross receipts about £6,000. About £1,500 necessary to negotiate.

No. **TRANSFER** of very flourishing School, for the daughters of gentlemen, in a healthy suburb of London. About 70 Girls, chiefly Day Girls. Gross receipts nearly £3,000. Net profit about £1,200. Exceedingly good premises.

No. **TRANSFER** or **PARTNERSHIP**. Old-established Boarding and Day School in Sussex. 20 Boarders and 15 Day Girls. Goodwill about £500.

Further information will be sent to applicants, but Messrs. GABBITAS, THRING & Co. will require **full particulars** before arranging introductions to their clients. No charge is made to Purchasers.

These School and Teachers' Advertisements are continued from page 631.

BOOKS FOR SALE.

Arnold (Matthew, D.C.L., LL.D.)—A French Eton or, Middle-Class Education and the State, to which is added Schools and Universities in France, a valuable account of French methods of education. Post 8vo (pub. 6s.), post free, 3s. 6d. 1892.

Quick (Rev. R. H.)—Life and Remains. Comprising an interesting life of the author as schoolmaster and educational reformer; also a valuable selection from his essays and records mainly on educational and literary matters, &c., including a detailed study of the mental growth of his two children from birth to the age of seven and four respectively. Edited from his biographical notes and miscellaneous unpublished writings by Francis Storr, portrait. Crown 8vo, cloth, pp. viii, 544 (pub. 7s. 6d.), post free, 3s. 6d. 1899.

4 Scott and Jones's First Latin Grammar. 1s.
3 Wells's Latin Prose, Composition Exercises. 6d.
3 Longman's Geography Series. Part II. 1s. 3d.
3 Carey's Physical Geography. 9d.

New Volumes of

Bell's Mathematical Series.

DYNAMICS.

By R. C. FAWDRY, M.A., B.Sc., sometime Scholar of Corpus Christi College, Cambridge; and Head of the Military and Engineering Side, Clifton College. A companion volume to the "Statics" by the same author, also included in the series. Price 3s.

A SHILLING ARITHMETIC.

By JOHN W. ROBERTSON, M.A., B.Sc., Mathematical Master, Robert Gordon's College, Aberdeen, and Lecturer at Aberdeen Technical College; formerly Assistant Lecturer in the Mathematical Department of Aberdeen University. Crown 8vo, 1s. net; or with Answers, 1s. 4d. net.

YORK HOUSE, PORTUGAL ST., LONDON, W.C.

BOOKS FOR PRIZES. CERTIFICATES.

PRIZES.

At the outbreak of the War a strong patriotic feeling manifested itself throughout the Empire. Animated by this spirit, the scholars in Secondary Schools frequently urged that the money usually spent in Prizes should be devoted to one of the War Funds. Owing to the action of the State, the need for this is not now so great; and as the cost of Prizes is not relatively heavy and their value in stimulating effort and keenness is apparent, a number of Heads have decided to again give Prize Books, this term. We have received already a number of Prize orders.

REWARD BOOKS.

The E.S.A. has in stock a very large selection of standard and other notable Books bound in choice leather and other fancy bindings; the prices ranging from 1/9 to £3 3/-. The Books are genuinely hand-bound in our Factory in London, and are of guaranteed excellence in style, quality, and durability.

Books are kept in stock in every branch of literature, including Biography, Travel, Romance, History, Poetry, Science, Belles Lettres, Fairy Tales, Natural History; also books specially suitable for French, Music, and other special subjects.

CERTIFICATES.

For those who decide to give Certificates in lieu of Prizes, we should be pleased to send a few suggestions and samples from our stock.

A full range of Specimens can be seen in our Book Room, where hundreds of volumes of Cloth and Leather Bound Books are also on view.

An illustrated Catalogue of Books in Leather Bindings, the largest and most comprehensive of its kind, will be sent free on request.

WILLIAM RICE, Junior, 3 Ludgate Broadway, E.C.

THE MIGRATION OF PLANTS AND ANIMALS.

VIRGIL taught us long ago that in the blessed Saturnian age, when the ideal of the greatest happiness for the greatest number shall be realized, when crops shall spring up from the root unbidden and the lion and the lamb shall lie down together, the lamb not reposing in the lion, *omnis feret omnia tellus*. Every land is in that happy period to produce everything. If this ideal goal have not yet been attained, it may be said with truth that it is to the credit of the human race that each country has had the intelligence to borrow freely from all other countries within its cognizance as many of its products as it needed for its support or comfort, and that each country has been generously disposed to aid the rest of humanity to develop its civilization by lending its productions to its neighbours. This healthy spirit of give and take has resulted in the most manifold and continuous migration of plants and animals, which migration has taken place on such a gigantic scale that most civilized countries can boast to have received and assimilated the greater part of the flora and fauna which would suit their climate. Few, indeed, are the countries which at the present time have not been affected by the immigration of plants and animals originally foreign to the region into which they have penetrated; indeed, the degree of a country's civilization may be judged to a large extent by the success attending its efforts to assimilate the foreign elements necessary to its development. It may prove of interest to our readers to endeavour to follow some of these plants and animals in their wanderings, and thereby perchance to realize the great debt which we owe to our ancestors for introducing them, and to many far-off lands for rearing them for our benefit. Sometimes it has happened that exotic fauna and flora have completely taken possession of a new country, transforming the whole aspect of the land, and ousting to a large extent the products of home growth. The most striking instances of such successful invasions are probably to be met with beneath the Southern Cross. New Zealand, before the advent of the first settlers, actually possessed no animals at all, but at present can boast to contain within its borders not merely all those that Europe owns, but many of the deer species imported from India and elsewhere, and likewise several kinds of birds, such as the beautiful Californian quail, while the trout fishing is admittedly unsurpassed in any country in the world. Australia, in which almost every native animal is marsupial, has now, like New Zealand, received all that the civilization of older countries has to give in the way of plants and animals, and indeed has in many cases had good reason to wish that some of the new immigrants had been content to stay in their own country, such as the wild rose of our hedges and the thistle, both of which have flourished and spread with a luxuriance unknown in less favourable climates.

It is not known generally that Australia can boast, among other non-indigenous animals, the buffalo, which is now found in enormous numbers in the north coast, especially in the York peninsula. Hunters are making a good living by killing these animals for the sake of their hide and their horns, and it is safe to affirm that hunters are now getting better prices than ever, for hides have more than doubled in value since the beginning of the War. Many even of the Australians are ignorant of the existence of these magnificent animals upon their continent, but they have been tamed in the neighbourhood of Port Darwin and are used as beasts of burden. The buffalo was introduced to Australia by the soldiers who once formed the British garrison at Port Essington, on the north coast. This was abandoned in 1849, and the soldiers were removed to Sydney. But they left behind them the buffalo, which had been procured from Timor. The buffaloes have now spread all over the north coast and have even been seen in Queensland. They are of

the same kind as those which are so much prized in Italy for their great strength, where they draw, as travellers will recollect, huge waggons laden with stones or wood, and yield milk and the cheese so much valued in Naples, the muzzarello, while their hides afford the toughest of all leathers. The early home of the buffalo seems to have been in Arachosia, in Afghanistan, near the modern Cabul; at least Aristotle, in his history of animals, knows them as natives of that locality, whence they must have spread over all Asia. We are in possession of the date of their first arrival in Italy, from which country we have received so many of our flora and fauna: we are expressly told by the great Lombard historian, Paulus Diaconus, that the buffalo appeared in Italy about 600 A.D. under the reign of the Lombard King Agilulf, and we may be grateful to the monk for imparting to us a scrap of such information in the place of the doings of kings and of theological controversies with which monkish chronicles are too often occupied. It has been conjectured that the buffaloes were probably a gift to the Lombard king from the Avars, a nation of Turkish origin, who were settled on the Danube and were on terms of intimacy with the Lombard court.

Australia has paid part of its debt to the countries which have enriched its civilization by transferring some of its flora to them: notably the numerous species of eucalyptus, known as red gum, blue gum, stringy bark, &c., many of which produce valuable timber, and each has special qualities adapting it for special uses. The gum tree has taken firm possession of Italy, and its beneficent influence is especially evident at the Tre Fontane, the Trappist monastery about six miles from Rome, where malaria used to be so prevalent that it was a constant terror to the monks. These have now planted a regular forest of eucalyptus trees near their monastery, and the consequence is the complete absence of malaria. One monk told the writer that his special charge was to master all that could be known on the cultivation of the eucalyptus; he knew accurately the special virtues of each kind, and had introduced as many species as possible into his eucalyptus plantation. The old idea was that the gum tree got rid of malaria by its odour: it is now known that it really benefits us by the fact that its stout tap roots drain the marshy soil, rendering it no longer a haunt of the mosquito (*Anopheles*), which has been proved to be the conveyor of malaria. The Trappist monks extract from the eucalyptus a very palatable liqueur, and the oil made from the tree is now universally used as a remedy for influenza. Probably Italy more than any other European country has cause for gratitude to foreign nations for their contributions to her civilization, and owing to her climate she has been enabled to acclimatize flora from cold and warm regions with equal success. The picture of Italy as it meets the eye of the traveller to-day is very different from that which met the eyes of those tribes who some two thousand years ago settled on its shores. Its present aspect (and, of course, the same holds good of our own island) is the result of centuries of unremitting toil and skill employed in the reclamation of forests and swamps, planting, sowing, and acclimatization. The saying "God made the country and man made the town" is only true in the sense that God made the soil and gave man the sense and the means to transform it. Italy has been for many centuries, so to speak, the clearing house of the chief flora and fauna of the world, receiving them, acclimatizing them, and distributing them to other countries. She was especially enabled to act in this way owing to her geographical position, possessing, as she does, windows looking out on the Occident and Orient alike. Other aiding causes have been the repeated incursions at different epochs of tribes from the north, the commerce from Tyre, the early Greek settlements on her coast, and the vicinity of Africa, which lies over against her shores. The widespread Roman Empire facilitated the import of the products of Eastern civilization and ended by rendering them indispensable. Then came the sway of the Byzantines and the Arabians, the Crusades and the commerce between the Italian coastal towns and the Levant,

and, after the discovery of America, the close political union with Spain. Such historical and geographical factors have made Italy of supreme importance as a recipient and as a main distributor of many products essential to our civilization. It is not a little significant of the way in which foreign plants have made themselves a part and parcel of Italian scenery that Goethe refers to the orange trees, the myrtle, and the laurel as the three trees which made the glory of Italy. All alike are immigrants, the orange probably from Persia, the myrtle from Asia Minor, and the laurel from Thessaly. Both of the latter trees owe their introduction into Europe to the sanctity with which they were invested as the favourites of Aphrodite and Apollo respectively. They were planted round the temples of the deities who loved them. The myrtle and the laurel alike are prominent in classic lore and are bound up with numerous legends. Pelops, the son of Tantalus, made a statue to Aphrodite out of a living myrtle tree, to ensure the aid of the goddess to his suit for the hand of Hippodamia. So, again, when the three ancient towns—Sida, Etis, and Aphrodisias—united in founding a new town, Boae, a hare (an animal connected with the worship of Aphrodite) showed them the appropriate spot and then was metamorphosed into a myrtle bush; this bush was consecrated and regarded as a divinity, and Pausanias saw it standing under the name of Artemis Soteira. The constant mention of the conversion of human beings into trees, many of which became objects of worship, seems to be a relic of the primitive age in which trees were actually worshipped, as indeed they are to the present day by some of the hill tribes of India.

(To be continued.)

A CANVAS SCHOOL AT DOTHEBOYS. MR. SQUEERS UP TO DATE.

By SYDNEY WALTON.

ON this stretch of heather, a stone's throw from Dotheboys—and Squeers was a pioneer of open-air schools—we are spending the first days of summer. The breezes which come across the heather are blowing the dust of cities from our souls.

Wordsworth, the singing priest of Nature, lived just beyond the hills; and somehow or other the winds bring snatches of his song. Can it be that his pages seem strange to us city-born when we read them by gaslight, and now are clear and wonderful on this lonely heath? Perhaps Nature is acting the priest to him. I have never learned from harsh chalk-dusty blackboards what I am learning now from the pages of earth's green book, and the souls of all of us are smoothing out with health and mystery—"a long cramped scroll freshening and fluttering in the wind."

That is a rare night, never to be forgotten, when first the stars serve you for candles, and the daybreak and the dew are beholden not as in a glass darkly, but face to face. In bedrooms, says our "Head," men simply become unconscious, and busy care draws phantoms and fantasies in their brains; but with no other curtain than the distant horizon and the closed eyelid, sleep is a draught of Elysian wells. One night a passionate wind came down from the mountain brow and lashed the frail tents in its wrath. The masters among us had to keep vigil with our lanterns, and in more than one tent we found boys sleeping through the storm—that young, careless sleep which

the thunders cannot break.

"The sleep amid the lonely hills." The grandeur of that experience is ours at every fall of night, and sometimes at noon. This is the stretch of mountain landscape which a painter peopled with angels, and dubbed "The Plains of Heaven." I prefer boys to cherubs; but it is easy to dream at sundown that those stray fleeces of white cloud, gold-tinted, are the wings of an aerial company which whisper

peace to men. Perchance these same stirred the waters of Bethesda.

I must tell you how it all came about that we are up here, beyond Barnard Castle and its hoary walls; up where the heather will spread a purple mantle at our feet and drench it with incense. Our "Head" is a son of the hills, and, though now he teaches in a city school, the poetry of his cradle is still part of him. The honeysuckle calls him—the honeysuckle about these white cottages which mark the feudal lordship of the Barnards, and stretch in a white string from Caldron Snout to Stockton-on-the-Tees. "A sunset touch, a fancy from a flower-bell," and this exile in the market-places of cities fills with longing for the native hills, fair with flower in midsummer and beautiful with snow and moonbeam in December. So he called us together one night, and poured out his heart. "These lads of mine," he went on passionately, "never see the country, the river in its purity, and the trees standing by knee deep in flowers; they never scent the new-mown meadows, and wrestle with the invisible wind as the patriarch wrestled on the bleak moor; and is it not vain to introduce them to literature which they cannot understand within the space of four walls? Great poetry is read and written under the open sky." And much more to the effect of a blurred birthright, and industrial ugliness to gaze upon instead of the architecture of God. Finally, he proposed a canvas pilgrim-school—this Borrow of a schoolmaster—and asked our assent. We cried a glad "Yes!" and next morning a gale of excitement swept the school when the whisper went round.

There were details to arrange. For one thing, red tape is as strong as a serpent's coil, and it took days before the Local Authorities—if ever a spelling were a picture those two words with capital letters present the stubborn front of a pyramid—could be convinced that real learning sometimes dwells in unlikely places, gracing a bit of tattered canvas or a hut of straw. But indeed that is the battle of the ages to convince men that truth may enter in at lowly doors, a casual wayfarer, and that it is not always found in the synagogues. Dr. Rouse is pleading for school colonies, for garden cities of childhood, and so, too, in a memorable book an American educationist is pleading, and all the gipsy blood in your veins pulses in response. And Matthew Arnold, H.M. Inspector of Schools, did not he sing of that scholar truant of whom "the grave Glensvil did the tale inscribe"?

After the twenty-fifth letter and a series of importunate interviews we prevailed upon Pharaoh and made ready for the wilderness. "I would have no school indoors from April to October," said our "chief," as we sometimes call him, to the astonished committee. "I would get out into the country and let the boys glean the lore of nature and dream old battles back again, and a vanished history, in the fields of their island-home. In the winter they can come back to their books and with them they will bring a thousand torches." And amid a stately rubbing of eyes our Art Master spoke up and told of fishermen he met yester-year who had no trace of bookishness but were learned in the mysteries of land and sea, and truly cultured therefore. The restoration of wonder, that was the key-note of this scholastic heresy, and I could not but remember the late Mr. Watts-Dunton's famous essay in which he shows that what the Elizabethans had and the eighteenth century rhymers had not was simply large wonder-eyes which looked out upon the sky as if it were symbolic tapestry and upon man no less. "Wander School" and "Wonder School"—such shall we call these flimsy tents on the fringe of Westmorland where "there's a wind on the heath, brother, and life is sweet."

We got into touch with local farmers, and they have welcomed us with their best true rustic hospitality—silent, but deep. Dickens is a favourite in our city school, and we do his *Christmas Carol* every December: and this nearness to Dotheboys, a sombre old farmstead from which at night one seems to hear a ghostly sobbing still, makes us feel that the spirit of Dickens is in our midst. We followed as nearly as we could the path of Squeers and Nickleby, from the old inn

at Barnard Castle up the steep white ladder of road to these glorious hills. And the villagers tell us that the old pedagogue was not so bad as he was painted; and, indeed, I met an old lady whose mother, she said, would have nought to do with Dickens after that disgraceful travesty. One of those pale-cheeked city lads rioting about me at this moment, to whom the rose of health is coming back, told me he himself would have forgiven Squeers in gladness for being brought here; and, truly, this sweet mountain air, which turns everything to music, would have softened to melody the shrill tongue of Mrs. Squeers even in moods most violent.

The brimstone and treacle we have not forgotten from our chest of homely medicines, and sometimes a dose of brimstone and treacle is put in among the precepts, and we have the scene of the Dotheboys all over again, save that Mrs. Squeers is not there in her nightcap. Our curriculum is life and play, and bivouacking when the sun goes down. There is a stretch of hill and dale; here beautiful caprice of cloud and sun, with rivers in their faint first beginnings, and all the geological warp and woof of which these hills are built—that's for Nature study, for geography if you will; and heaps better it is, and livelier and healthier, than reciting the capes of Britain. And in history this Westmorland is rich enough. We have begun to interrogate names of places, and that final "by" in Kirkby and a dozen others which brings us upon an ambush of Danes. For literature we are wandering to the Lake District; and for imagination, which is the blue bird of literature, its wing is over us all the while. The great glad earth itself is our Wonder School.

THE CHOICE OF MUSIC FOR TEACHING PURPOSES.

By PERCY A. WHITEHEAD.

ONE of the chief difficulties which confronts the music teacher at the present time is unquestionably that of finding suitable teaching material for the purpose of carrying on his educational work. In this, as in some other respects, Germany has for many years past undoubtedly had a monopoly, and there has been little fault to find—at any rate, from the point of view of general utility—with the various editions of the Classics which have formed the basis of our music teaching. The excellent quality of the paper and printing, and, what is of no small consideration, the cheapness of many of the editions, undoubtedly helped to create a demand which, in the present condition of things, it is not easy to supply all in a moment. The stocks which were held by many music retailers at the outbreak of the War are rapidly becoming used up, and some works are already unobtainable.

This means, of course, that other works must be sought for until such times as German editions are replaced by native products. Let us hope that these, when they do appear, will have the same virtues of clearness, cheapness, and good style to which we have become accustomed. Meanwhile, some guidance is wanted, especially by music teachers in schools, who of necessity use large quantities of music in their work from term to term.

The "school parcel" system, on which many teachers rely for their supplies, while being very convenient and saving the teacher a lot of trouble, is not without obvious drawbacks; in fact, I have heard many good teachers condemn it altogether. Where requirements are not specifically stated—and often they are not—the parcel appears at the beginning of each term, as a mixed collection of the publications of one firm alone, sometimes including, but not often, a few foreign works, for which the firm is the agent.

To satisfy real educational requirements, no teacher or school should be bound to the publications of any single firm, excellent though their catalogue may be. I am referring more especially to instrumental music; of choral music I shall have more to say on a subsequent occasion. With the "parcel system," there is often the temptation to the

teacher to give to the pupil material which lies most ready to hand, often without regard to its real suitability for overcoming the difficulties—be they mental, muscular, or musical—under which the pupil is at the moment labouring. Some teachers, of course, make their own list, and add to it from time to time, as new pieces and studies make their appearance. I strongly urge every teacher to do this, and if, in addition to the title of the composition and the composer's name, they were to note the *opus* or catalogue number, they would save both themselves and the London collectors much time and trouble.

The free parcel of new publications which some publishers now send out to teachers of standing is of very great help, especially to those whose field of labour is in the provinces, where the stock of the average music shop will be found to consist for the most part of a choice selection of rag-times, waltzes, and ballads. Anything in the educational way, they have to "get for you." I say these parcels have been of very great use in keeping one in touch with new publications; but their circle of distribution is, perhaps, after all, not a very large one, and for the favoured few who receive them there must be thousands who don't, and it is to the latter especially that I wish to be of some use. That invaluable little paper, *The Music Student* (and it is a real music paper, conducted by musicians for musicians, and not the organ of some publishing firm who exploits its own wares to the exclusion of everyone else's), has for some time past published a monthly list—which is graded, by the way—of the best music received. The compilation of this list is in the capable hands of Mr. Ernest Fowles, F.R.A.M.

The Society of British Composers, about the beginning of the War, also issued a small graded list of British pianoforte works, recommended for high-class teaching purposes. This list was no doubt found useful by the society's members, and it is to be hoped that, if a new and enlarged edition is printed, it may be made available for the use of music teachers generally. The idea has often occurred to me that what is really needed is a kind of "clearing house," where one could go and examine the publications of the various firms at one's leisure, without always having "our own edition" pushed down one's throat. Such a "house"—which will obviously be of great benefit to both publishers and teachers—has quite recently sprung into existence. It could not have come at a more opportune moment, and, provided it is conducted on right lines, it should do much to minimize many of the difficulties of selection I have mentioned. It is called "The Anglo-French Music Company," and its Office is 31 York Place, Baker Street, W. To quote from the "Foreword" in Catalogue No. 1:—

The selection of works by British composers is, it is believed, the most complete example of its kind, and, while it cannot pretend to be an exhaustive list, has been made thoroughly representative of all classes of native work. . . . Thanks to special arrangements concluded with the most important French publishing houses, the Anglo-French Music Company is in a position to offer to the attention of British musicians . . . the remarkable editions of the classics published by the firms of Durand, Hamelle, Leduc, Lemoine, &c.

The Anglo-French Music Company have been appointed sole agents in Great Britain for the French Syndicate which is issuing the *Edition Nationale Classique*—an edition which, under the direction of the principal French musicians, will eventually comprise all the productions of the great classical masters.

Teachers who desire to examine any of the works in the Catalogue . . . are invited to visit the Company's premises, where a room is set aside for that purpose, or, if desired, any work will be sent on approval on payment of carriage. . . .

Of the *Edition Nationale Classique* before-mentioned, I shall have something to say in a future issue, but meanwhile I would venture to point out to some of our English publishing houses that the edition will be under the direction of the principal French musicians. The list of names I have seen well warrants the supposition that the work of editing will be well and truly done; so that in this, as in many other directions, we in England must exert ourselves, or the foreigner will, in days to come, still keep the lead in matters musical.

REVIEWS AND MINOR NOTICES.

Germany, 1815-1890. By Sir ADOLPHUS W. WARD, F.B.A., Litt.D., &c. Vol. I: 1815-1852. (12s. Cambridge University Press.)

Very few, if any, Englishmen have so thorough a knowledge of German history during at least the last two hundred and fifty years as Sir Adolphus Ward, and this addition to the Cambridge series of Histories of the countries of modern Europe has therefore an especial claim to our respectful attention. The present volume was, we are told in its preface, written before the War broke out, and, as it was intended to promote a better understanding between Great Britain and Germany, and owes a heavy debt to the works of German historians, readers will not be surprised to find that the steps in the accomplishment of German unity are treated in it "with whole-hearted sympathy," though to those who regard German history in another light it appears under the guise of the triumph of Prussian particularism achieved by blood and iron. This standpoint must be kept in mind, for it has some effect on the author's view, as, for example, with reference to the Schleswig-Holstein question. On a point of some importance connected with this question we venture to think that he has been misled by his German guides, for he condemns the assertion that "in duchies the succession was subject to the Danish *lex regia* of 1665" (page 288). This way of writing of the Duchies confuses the question. Holstein, as a German fief, was a member of the Confederation, and Denmark did not dispute the right of the male line to the Holstein succession. The position of Schleswig, or South Jutland, was altogether different; from remote days it lay outside the Empire and belonged to the Danish kingdom—"Eidera Romani terminus imperii." It was conquered by Holstein, united to it under the Oldenburg dynasty, and in the sixteenth century the succession was confined to the male line. But Denmark regained Schleswig after the war which ended with the Peace of Fredericksborg, 1720, when England and France guaranteed its incorporation with the Danish crown, Prussia having already done so; and the oath of allegiance taken the next year to Frederick IV expressly recognized the right of succession as governed by the *lex regia*. The volume before us extends to the events immediately consequent on the humiliation of Prussia at Olmütz, and is to be followed by another ending with the dismissal of Bismarck; if that is on the same lines the whole work will be much longer and more expensive than at least most of the books in the same series. It deals with a highly complex subject, one that could not be dealt with adequately in a small compass, and its author's talents do not include that of saying much in few words. He has met the complexity of his subject by well devised arrangement, but he has not been equally successful in his choice of what he would tell his readers; for one thing, his book contains too many names of men of whom, doubtless for lack of space, little if anything more is said. This defect in selection, and a certain flatness of style, combine to make it unusually heavy reading for a book of history.

The opening chapter is introductory; it points out the rise of the *dualism*, the double leadership of Austria and Prussia, which, in itself a bar to German unity, was a necessary step in its accomplishment. The theory of Prussia's German "mission," as existing from the earliest days of its political existence, or even from the reign of Frederick II, is disposed of by an able examination of Prussian history before the War of Liberation, as to which we would only remark that in the statecraft of the Great Elector perfidy was not less conspicuous than resolution. After a statement of the defects in the Confederation which took the place of the German Empire, we have an account of the political condition of the principal German States at the time of its establishment. The third chapter deals with the period of reaction which followed the opening of the Federal Diet; the assembly disappointed

the hopes entertained during the war, it had no power to decide any question of importance, each sovereign remained master in his own State. Some, especially in the south and south-west, as the rulers of Württemberg, Bavaria, Baden, and Nassau, granted constitutions providing for territorial estates, in accordance with the plain intention of the Federal Act, though they had no intention of limiting their own power by parliamentary government. The Grand Duke of Saxe-Weimar alone adopted a more liberal course, and obtained, not without difficulty, the guarantee of the Diet for the constitution of his little principality. Others, especially in the north, simply ruled through assemblies of notables without pledging themselves in any way to their subjects; while Austria and Prussia remained strongholds of absolutism, and by their agreement made the authority of the Diet subordinate to themselves, and thus stultified the scheme of the Confederation. Much is told us of the various unsuccessful attempts at reform, especially of that made by University students associated as the *Burschenschaft*, which was crushed by the Vienna decrees. Metternich was supreme, Frederick William III of Prussia followed his lead, and the Tsar encouraged the German sovereigns in their fears of demagoguery. Differences as regards foreign policy, sufficiently indicated here, weakened Metternich's influence at Berlin; and meanwhile a step was taken by Prussian statesmen which proved to be of the first importance in the advance of Germany towards a union exclusive of the Austrian dominions. From 1819 onwards Prussia drew other German States into its customs system, and, chiefly owing to the able and steadfast policy of Eichhorn and Motz, founded and gradually developed the *Zollverein*.

The French Revolution of 1830 caused an increase of liberal activity in Germany, which was met by repressive measures, and constitutional government was reduced to a mere pretence. A full account is given of the repeated disappointment of the hopes of the Liberal Party in Prussia by that incompetent dilettante, Frederick William IV, whose instability, shiftiness, and lack of courage are not to be palliated by his enjoyment of art and literature, his love of meddling in religious matters, or the esteem of "Queen Victoria's gifted consort and his wise counsellor, Baron Stockmar"—words that carry us back to early Victorian days. The revolution of 1848 came upon the absolute rulers of Germany like the fall of an avalanche, though, as is pointed out, it was preceded there, as in Europe generally, by a presentiment that political changes were impending; in Bavaria, indeed, where the Government had been shaken by the scandals of the Lola Montes episode, there was much agitation, and the King resigned as soon as the news of the Paris revolution was received. Metternich fled for his life from Vienna, and his example was twice followed by the Emperor. Austria struggled desperately with the revolution in the non-German nationalities subject to her, and crushed it in Lombardy, in her Slav provinces, and with the help of Russia in Hungary. Military force also crushed it in the capital. Something, however, was gained by the movement, for the peasants were freed from their former subjection to the landowners, and equal civic rights were secured to all classes in the monarchy. In Berlin the causes of the revolutionary outbreak, to which, after an exhibition of hesitation and feebleness, the King yielded everything, are not distinct, and it is interesting to find that our author thinks that it may partly have been due to the insolence and tyranny of the military, the Guards especially being regarded by the civilian population "as types of an odiously arrogant caste." After a short final struggle with the Chambers, the King was persuaded to give way, and in 1850 Prussia, "in name at least, definitely became a constitutional state." With the struggle for constitutional government, the movement in favour of German unity under the hegemony of Prussia was closely connected; it failed, and Schwarzenberg humbled Prussia to the dust at Olmütz. The old system of the Confederation was restored, and the two leading Powers—the Prussian government following the lead of Austria—made unscrupulous use of it against the democratic element which had found its way into the constitutions of some of the smaller States.

A History of Sculpture. By H. N. FOWLER, Ph.D.
(7s. 6d. net. Macmillan.)

This book follows the usual divisions of the subject. It is not so discursive as the older *History of Lübke*; the illustrations (in the text) are all based on photography. Beginning with early Egyptian and West-Asiatic art, it reviews the Antique, passes through Byzantine to medieval work, and so to the Renaissance and sculpture of modern times, which are reckoned from the classical revival of Canova. The Medieval and Renaissance sections are treated under nationalities: Italy, France, Germany, England, Spain, the Netherlands; modern sculpture is traced further, in Scandinavia, Russia, and the United States. A single brief chapter, added for completeness' sake, gives a summary of that voluminous subject, the sculpture of the Far East.

A history of this kind is a study of evolution; it is also a record of achievement, a chronicle of works and workers. Both aims are kept in view in this book; it is part history, part guide-book. As a study of evolution, neither uniform nor precisely continuous, it follows the growth, the disintegration, the modification, the revival of many ideals, religious, æsthetic, national, as art tries to express these. Creative energy appears at some periods to be a diffused force, a social will-power, expressing itself through the common spirit of a multitude of unnamed craftsmen; now local schools flourish their brief life-time; now the dominating influence of one will supplant all the rest; again, the insistent personality of a single genius will compel all the world to follow it, whether for good or for evil. Such lines of development, pushing out here and there, broken, interrupted, crossed and changed; such action and reaction of creative ideas and technical skill constitute history properly so called. They may be found traced in this book, not in any new or markedly original way, but soberly, diligently, and dispassionately; and the immense field of research is carefully surveyed and mapped out for the learner. It is in his pursuit of the second, what we may call the guide-book, aim, that we think the author, in his desire for completeness of survey, has over-weighted himself.

In æsthetic judgment Dr. Fowler follows fairly safe lines and usually accepted generalizations. He is no partisan; we might call him almost coldly impartial; he can find merit in Bernini and the Baroque as "the proper expression of the spirit of the time"; he does not, like some modernists, reject Canova and all his works as insipid pseudo-classicism; he endeavours always to appraise fairly; he is temperate in eulogy, and very sparing of condemnation. Thus the book gains in level equanimity, but forgoes, doubtless by set purpose, that style of criticism which is the expression of personality. It is a careful, dispassionate chronicle of honest, journeyman workmanship. The author has compiled a guide as complete as his limit of space allows; and, considering the immense range of the works of art brought under review and the mass of critical material indicated by the carefully indexed bibliography, it must be pronounced a work of devoted and conscientious labour.

Dr. Fowler says, in his preface, he "has attempted no detailed criticism," and has "included a considerable number of names." There are too many names, often running to mere lists, especially as the author comes to modern times. It is not fair to find fault with a book for not being what it does not profess to be; yet a critic may be allowed to suggest that the really stimulating book for young students would be one which worked on opposite principles, selecting a few acknowledged and representative masterpieces, subjecting them to artistic analysis, showing how and why they are representative, and rigidly excluding all but the greatest names and works—a book which criticized nothing which is not shown by illustration to the eye, and named no sculptor whose work is not held important enough for illustration. In such a book one would welcome the personal element, the point of view, even the prepossession, of an enthusiastic teacher. Even dogmatism, such as Ruskin's, stimulates while it irritates.

As it is, one presumes that the work is meant for such young students, and "general-publicans" as can travel with the book

in hand, or have access to some museum adequately stored with casts, drawings, and photographs. The book has nearly two hundred illustrations in the text, all by photographic process; but they differ greatly as useful accompaniments to the written matter. No indication of relative size is given, and large works appear so reduced that details, often essential to the points made in the text, are lost.

The book, then, is a learned book: a painstaking review of a mass of material too extensive and too manifold to be treated except in a general way. The author has endeavoured to omit nothing which could possibly be brought within the compass of his pages. If he had omitted a great deal, and treated what was left with more detail and personal appreciation, we think he would have produced a more attractive book. Whether it would have been more useful is a point which individual taste and need must settle.

The date of publication is indicated by some melancholy notes. Of Reims we read "nearly all these beautiful works were destroyed in 1914"; of the Netherlands, that "many of the works to be mentioned are certainly no longer in existence."

The many names and dates appear to be printed with great accuracy. In the note to page 212 the date 1531 is evidently wrong.

A Classical Dictionary. Edited by H. B. WALTERS, M.A., F.S.A. (21s. net. Cambridge University Press.)

This dictionary attempts to include in one volume articles on Greek and Roman Antiquities and on all proper names coming under the headings of Geography, Biography, and Mythology which are likely to come before the notice of the ordinary reader. It is intended for students at public schools and the Universities, and is compiled in view of the lack at the present time of any complete, yet handy, Classical Dictionary, and in particular of any up-to-date Dictionary of Antiquities suitable for use in schools. There is a certain inconvenience in the combination of Greek and Latin words in one alphabetical arrangement, particularly when the former are printed in Greek letters and (e.g.) *χορπυία* is found under C; but the system followed is clearly explained, and the reader will probably get used to it without difficulty. The volume has a very useful index of classified headings, it is well printed and not inconvenient to handle, and the illustrations are numerous and clear.

No single writer is competent to criticize the whole of such a work as this, and the present reviewer has ventured only to notice certain general points, and to give his impressions on certain groups of articles which he has read with special care. The lower chronological limit of the work is not stated, but there is no article on Plotinus or on Dio Chrysostom, though many writers later than the last-named are included. A somewhat serious omission is that of the writers so constantly named in commentaries and so meaningless to schoolboys—Hesychius, Photius, Suidas and the rest. A few lines (even a few words) on each of these would just give the young student what he so often wants to make his "notes" intelligible.

The articles on Antiquities, and particularly on Art, are generally very good and as full as could reasonably be expected. Those on Greek Legal Antiquities are also very satisfactory, brief, clear and accurate, though the articles on the Trierarchy and connected subjects evade (perhaps necessarily) the discussion of formidable difficulties. But the philosophic and literary articles are much more meagre and often of a very inferior quality. Thus the account of Demosthenes is very inadequate; the speech "De Falsa Legatione" is not even mentioned in it. (There is some inconsistency in regard to this speech in other articles. Thus in art. *παρρηγορεία* it is stated definitely that the speech was not delivered, and a very doubtful theory of the trial is given dogmatically; while in art. Aeschines it is assumed that the speeches of both orators were actually spoken.)

The most unsatisfactory article which the present reviewer has read is that on Plato. The existence of the Theætetus-group of dialogues is not so much as hinted at, and the

description of the Symposium as "a survey of the educational theories of the day" gives no inkling of the true value and character of the dialogue. Again the account of the "ideas" as "a universe of 'ideal' thoughts or conceptions from which emanates" (italics ours) "the universe of natural things," suggests a quite different theory from that of Plato. The account of the Sophistae is also misleading. "They had no doctrines in common, but agreed in disliking philosophy. Their moral principles were not very high, and their exclusive study of style and method, and persistent practice of oratory and debating, tended to a dangerous disregard of truth." This is far too indiscriminating, and the services rendered by the greater Sophists to human progress are not recognized in the article at all. The article on Parmenides gives a condensed account of his philosophy which is almost unintelligible and certainly misleading.

Several of the articles on the Greek drama contain assertions whose truth is more than doubtful. Thus the art. Dithyrambos states that "a dithyrambic Chorus, personating Satyrs, became a principal feature at the Athenian festival of the Dionysia." Some readers will inevitably infer from this that the performers of the cyclic dithyrambs were dressed as Satyrs. Again, what evidence is there that Thespis invented an "improved form of dithyramb Chorus"? Nothing in any passage about Thespis connects him with dithyramb. The articles on Tragedy and Satyric drama contain all manner of disputable statements. There is no article on Pratinas at all. In art. Comoedia, when speaking of the Middle Comedy, the writer has forgotten the definite statement that a principal theme of this period was the criticism of other authors, and the article does not even mention the persistence of certain stock types in Comedy throughout its history.

Most of the articles on Roman authors which the reviewer has consulted appear to be good so far as they go, though they are very brief as a rule in comparison with the articles on Antiquities, which constitute the most valuable part of the book.

A later edition of the Dictionary will, no doubt, benefit by further revision. It may be found that it is really better to offer two Dictionaries, as Dr. Smith did in his smaller series. If that were done, the information, without being brought up to the scale of large dictionaries, might be made at least as full as ordinary University students require. At present it is not so, at least on the literary side. But the attempt made was worth making and succeeds on the whole, and we have no doubt that the volume has a long future of usefulness before it.

The Rt. Hon. Sir Henry Enfield Roscoe, P.C., D.C.L., F.R.S. A Biographical Sketch by Sir Edward Thorpe, C.B., F.R.S. (7s. 6d. net. Longmans.)

This sketch of Sir Henry Roscoe is based on an obituary notice prepared at the request of the Councils of the Royal and Chemical Societies for publication in their respective *Proceedings* and *Transactions* by his old pupil, his fellow-worker and lifelong friend, Sir Edward Thorpe. It will appeal mainly to chemists and to those who take an active interest in the extension and popularization of Universities and higher technical education. It supplements the autobiographical reminiscences published in 1906, under the title of *Life and Experiences*, and tells us much that the author's modesty prevented him from saying of himself. The photograph that serves as a frontispiece is a telling likeness of the genial, broadminded, shrewd yet honest politician, the trusted confidant and adviser in educational matters of both parties, whose lineaments for the last thirty years have been as familiar to the learned and political world of London as they had been to the narrower circle of Manchester where he had made his mark as a teacher and a pioneer.

Where the material is so abundant it is hard for a reviewer to choose the topics which most deserve comment, but we select that which is likely to provoke the most adverse criticism, and one that, had Roscoe survived to these evil days,

would undoubtedly have exposed him to the charge of being a false prophet and no true friend of England.

It was in 1904 that his old pupils determined to celebrate his jubilee, the fiftieth anniversary of his graduation as a Doctor of Philosophy in the University of Heidelberg; and in acknowledging the address, signed by three hundred of his former students, he wrote: "If I succeeded in forming a School of Chemistry at Owens, it was because, in the first place, I learnt from Bunsen how the foundations of such a school must be laid; secondly, because I fortunately secured the co-operation in the task of good men and true, like Schorlemmer and Dittmar." Still more significant are the articles that he contributed in later years to the *Deutsche Revue*, in which he strove to remove misunderstandings between England and Germany. His latest communication, declined by the *Revue*, but published in *Nord und Sud*, is here reproduced in full. The event has falsified Roscoe's predictions. The *All-Deutschen*, whom Roscoe dismissed as "a somewhat insignificant clique" with no following in the nation, have proved the dominant factor; the old game of war is *not* played out; the great men of science—men of the stamp of Helmholtz—in whom Roscoe confided have utterly failed to persuade Germany to pursue her true ideals—i.e. to take the foremost place in the conquest of the world by those arts of peace in which she has shown her pre-eminence.

The article is out of date. The whole nation has gone mad. Yet we cannot but believe that this madness is temporary, and it behoves those of us who are most convinced that a strait jacket is the only cure for this madness, to lay to heart Roscoe's wise and temperate appeal, and to treat our enemies as men who will one day be our friends when this mad devil has been cast out.

His philosophic calm and gay humour he preserved to the very end. In the last letter quoted (February, 1915) he writes from Woodcote Lodge to his old friend asking him whether he has joined the Navy and taken command of his requisitioned boat, and warning him that he will find all the garden vegetables destroyed so that the Hun may be an hungered, and proposes, like Sir Wilfrid Lawson, to empty his large wine cellar down the drain or into the duck-pond.

To Roscoe's labours as a Royal Commissioner, and the part he played as the promoter and modeller of the new Universities, and in particular as Vice-Chancellor of the University of London from 1896 to 1902, we hope to return, but we may notice in conclusion what is here related of his action during the twenty-three years that, as representative of the Royal Society, he served on the Governing Body of Eton. He lectured himself, and secured the provision of two chemical laboratories and one small physical laboratory, but he failed to overcome what he termed "the enormous inertia of this ancient machine." No one felt more keenly than himself that the results had not been commensurate with all the hard work he put into it, and more than once he considered the advisability of resigning his Fellowship as a protest.

Conscience and Christ. By Canon H. RASHDALL, D.Litt., &c. Being the Haskell Lectures delivered in the Theological Seminary of Oberlin College, Ohio, U.S.A. (5s. net. Duckworth.)

The question which Dr. Rashdall proposes in this series of lectures is: What is the sanction of Christian morality—the authority of conscience or the authority of Christ? Roughly, there are three possible answers. First, that of the present Bishop of Oxford in his book on *The Sermon on the Mount*, that, though conscience approves of the Christian law of conduct, the fact that it is given us by the authority of the Incarnate God is of primary importance; secondly, that of Mr. Bernard Shaw, expressed in his recent preface to *Androcles and the Lion*, that it matters not at all what is the source of the Christian ideal—that, in fact, the characters of fiction have had more influence on human conduct than the characters of history; the third, that of Dr. Rashdall, that, though the authority of Christ matters somewhat and secondarily, that of conscience is primary and supreme.

It will be noticed that none of them ignores the authority

of conscience in the matter. Paley, indeed, ignored it, or did so to all practical purposes; but then all are now agreed that Paley's position is impossible. The ultimate supremacy of conscience in the matter is easily proved. If someone claiming Divine authority orders us to act in a way which conscience does not approve, we are bound to question the source of the authority. If the answer is an appeal to supernatural powers and external marvels, we reply: "But these may be the works of a malign power masquerading as good." If the rejoinder is, "But the motive of them is good," here again is an appeal to conscience, for we can only judge of a person's motive by referring to his moral character in general. This, indeed, is the sort of line that Dr. Rashdall follows.

It is not difficult to discover what first suggested the subject of the lectures. Dr. Rashdall gave evidence before the Royal Commission on Divorce, and when he claimed for the moral consciousness a right to "have a say" in the matter, he was severely cross-examined by a high ecclesiastical authority "who had sat at the feet of Edward Caird," as to whether such a claim was not "dangerous." Of course it is; so are all claims worth making. Perhaps Dr. Rashdall may seem to spend too much time in attacking a hopeless position, but it is a position which is only too common in theological circles, and is assumed, as he remarks, in the majority, if not all, of the orthodox ecclesiastical journals. Having attested the supremacy of conscience in the matter, Dr. Rashdall naturally spends a good deal of time in the effort to show that the ethic of the Gospels is in all respects in accord with the deliverances of our moral consciousness—a consciousness which ultimately he holds to be capable of attaining to objective moral truths.

One cannot help wondering whether, in view of this supremacy of conscience (whose authority, if objective, must be less individual and more collective than Dr. Rashdall's treatment of it would lead us to suppose), this detailed inquiry is worth while. Perhaps here Mr. Shaw may help us. If Jesus was a discoverer of new and revolutionary ideas as to life and its relation to God, what matters is the thing discovered. If we have thoroughly exploited the discovery, the credit and authority of the original discoverer matter no more than Newton's credit and authority matter to the Laws of Gravitation. But if we had lost or perverted Newton's principles, and found that in consequence our calculations in mechanics were going wrong, it would be important to look again into the *Principia* and rediscover Newton's discovery—to find out what he really did say or mean, not because he was bound to be right, but with a view to giving his theories a real test.

If there is a difference between the case of Newton and of Christ it is this: that Christ's discovery was made by means of dynamic experiments carried out in his own person, Newton's by means of dynamic processes tested through impersonal agents. As Gore puts it, the Christian Law has all the limitations of Law—it only convicts man of Sin. But the Christian power is something personal, and thus the personality, if not the authority, of the discoverer matters a great deal. But the "Grace" which comes of Christ is not something apart from the message; it is simply the power and appeal of a message embodied in life and action. And that is how the *élan vital* is always conveyed, whether through the pen of a Dickens or the Cross of a Redeemer.

Short History of the English People. By JOHN RICHARD GREEN. Revised and Enlarged, with Epilogue, by ALICE STOPFORD GREEN. (5s. net. Macmillan.)

A *Short History of the English People* was first published in 1874. As all serious students of history know, it marks an epoch in the study and appreciation of the subject. It is the people, the nation, who are really important. The impulses of national feeling, the growth, development, social conditions, industry, commerce of a nation are the real subjects, the *raison d'être* of history; the doings of kings

and statesmen are of minor importance. "A State is accidental," said Green, "it is no real thing to me. But a nation is very real to me. That you can neither make nor destroy." Those who know the part the Congress of Vienna is playing to-day in the Great World Conflagration can best realize that the base, aim, and scope of history have changed and will change; the end is not yet.

It was a last charge of a dying historian to his wife that she should rewrite this history and correct certain details; fuller knowledge and deeper research had shown such correction to be necessary. Mrs. Green has added an Epilogue of 150 pages, dealing with the period 1815–1914; she is to be congratulated on the thoroughness with which she has done this admirable piece of work, the sense of proportion she has preserved, the power to evoke and maintain interest, to marshal and summarize great forces—such as trade unionism, the co-operative movement, the emancipation of women—which are transforming the England of 1815. One of these brilliant summaries occurs on the first page of the Epilogue: "In that hundred years every order and class in the State has been profoundly changed, and with these the State itself transformed in the theory of government, the source of power, and the exercise of authority." Indeed, the marvel is that the expression "British Constitution" can still connote what has varied so profoundly at different periods of our history.

The Epilogue is divided into two sections, the first dealing with the Social Revolution, the second with Foreign and Colonial Policy. The key-note of the first is the onward sweep of democracy, its determination to share in the government of the country, the titanic struggle waged by the Have-nots and the Haves. In 1815 there was not a single Act on the Statute-book to protect labour in its bargain with capital; the Six Acts made it penal to attempt such bargain. Justice was administered, as indeed it still is, to a large extent, in the interests of a narrow caste or oligarchy, who considered that they alone had a stake in the country, and who had in truth made England great. One hardly knows, in the struggle, whether more to admire the tenacity of the ruling caste or the determination of Demos; their interplay makes a great epic. Reform in Britain is slow; Mrs. Green holds that it usually takes seventy years for an agitation for any reform to achieve the end. In the case of the "climbing children" it required a hundred and fifteen. In her summary of the humble beginnings of a system of national education, allusion is made to that magnificent dole of £20,000 to educate a nation, and Place's observation is quoted, "Men in power dread the consequences of teaching the people more than they dread the effect of their ignorance." In the middle of the century England permitted children of twelve to work sixty-nine hours weekly, when an adult negro worked only forty-five. The impassioned apostle of State for the weak, Lord Shaftesbury, inveighed against this hideous blot on our civilization, and against the tyranny of the Lords who blocked equitable legislation: "The Peers," said he, "act as breakwaters, and think as such."

Mrs. Green comments on the general perplexity that exists as to the true road of constructive reform. The working classes lack thinkers. "Their political activity has so far outstripped their zeal for education." By accepting the system of the middle-class, their intelligent youth has been drawn into a middle world of salaried teachers and clerks, whose services and leadership are thus lost to the workers. A word of caution concludes the first section—a call to union and unity of action: "At no time in the history of England were the issues of constitutional changes so momentous, or the claims so great on the wisdom and mutual allegiance of the English people. The defection of any class may ensure failure." After dwelling on the noteworthy loss of power sustained by the House of Commons of recent years, a loss by which the Cabinet has profited unduly, and which synchronizes with very little reverence for tradition, we are reminded of the dangers which beset free peoples, dangers foreseen by President Lincoln: "It has long been a grave question whether any government not too strong for the liberties of

the people can be strong enough to maintain its existence in great emergencies."

In the second section, Mrs. Green has probably accepted her "reference" from the important Conference of the Historical Association held in London University last January. Colonial representatives complained that our history books conclude with Waterloo; that no shadow of an idea of the meaning of Empire ever falls on the reader's brain through perusing our histories. Our author contrasts for us the immense varieties of constitutional government affected by Canada, Australia, New Zealand, South Africa. Each has its own peculiarities, and is resolved to work out its destiny in its own way. The story is necessarily brief; but the main lines are there, as well as India's special difficulties; it leaves on the mind the impression of something great, tremendous—of large variety and infinite possibilities.

On the German mind the impression left by this vast Empire, five times greater than Europe, has been one of indiscipline, disorder, ignorance, and amorphousness; no conscript army exists to defend it; no fiscal agreement binds the parts together; no central control can call colonies, dominions, and dependencies into line. Our Empire has been "a standing outrage to the Prussian sense of organization." At the moment it is in the crucible, and we know not what will emerge finally. We are reminded, by two quotations (from letters) which close the Epilogue, that J. R. Green held the same faith with regard to Liberty. We have found Liberty good for ourselves; good for our great Empire. We are now facing a power that challenges us and those other nations that have built high hopes on France and Britain; and the challenge is: "Is liberty good for all?"

Selected Poems of Thomas Hardy. (2s. 6d. net. Macmillan.)

Whether Matthew Arnold will live in memory as a poet or a writer of prose is still a disputed point among critics. In the case of Thomas Hardy no such question is likely to arise. Before his latest and greatest work, *The Dynasts*, few even of the reading public were aware that he wrote verse at all. The length of that epic drama has confined his audience to the "fit, though few." Yet we welcome this latest volume of the "Golden Treasury Series," which will make the poet known to numbers who were familiar with Thomas Hardy only as the Wessex novelist, the author of *Under the Greenwood Tree*, *Far from the Madding Crowd*, and the unforgettable *Tess of the D'Urbervilles*.

Poetry was not with Mr. Hardy a second nature. He did not, like Pope (and Ovid before him), "lisp in numbers," but, as he tells us himself, he "practised writing in verse from 1860 to 1868," while still an architect serving under Sir A. Blomfield—a practice that he "resumed later." At the same period he "read Latin and Greek with a fellow-pupil," but the impression left on him by this study was faint and is hardly perceptible. We might safely guess that he had studied Shelley and Swinburne even without the tribute he pays to these poets of the last century; but of the poetry of Greece and Rome there is hardly an echo. The one note in the volume refers us to Hor. Epis. i, 12, but without it we should fail to recognize Horace in

Why the All-mover,
Why the All-prover,

Ever urges on and measures out the droning tune of things.

Of poets ancient and modern the one to whom he shows the closest affinity is undoubtedly Lucretius; but there is no verse that recalls the "rise and long roll of the hexameter"—the golden work that wooed the passionless bride, divine Tranquillity." His ghostly world is still the world of the *Odyssey*, the *ἀμεινὰ κάρηνα*, whose voice is shrill and weak as that of bats. None, either dead or living, bids us "faintly trust the larger hope."

Yet, as in the Wessex romances, despair itself is mild, and now in a vignette, now in an epithet, we have glimpses of pastoral life and woodland ways that made the early romances a household word. The narrative poems are nearly all of them tragic: of love frustrate or deceived; of infinite passion, and

a heart that yearns for the impossible. But the poet himself never rails or utters one complaint; the earth as he sees it is very good, and he is content to look around him and view the pageant as it passes. The world is a comedy to those who think. We would gladly have quoted one of the longer poems—for instance, *The Souls of the Slain*—but must content ourselves with a shorter specimen, *The Division*:

Rain on the windows, creaking doors,
With blasts that besom the green;
And I am here, and you are there,
And a hundred miles between!

O were it but the weather, Dear,
O were it but the miles,
That summed up all our severance,
There might be room for smiles!

But that thwart thing betwixt us twain,
Which nothing cleaves or clears,
Is more than distance, Dear, or rain,
And longer than the years!

The Fourfold Gospel: The Law of the New Kingdom.

By E. A. ABBOTT. (12s. 6d. net. Cambridge University Press.)

This volume forms Section IV of Part X of Dr. Abbott's great work, *Diatessarica*. It displays the same width of learning, minuteness of scholarship and imaginative historical sympathy, which we have grown accustomed to look for in his writings. Detailed criticism of a book which is essentially one for the scholar and expert must be left to the theological reviews. All we can do here is to indicate in outline the main positions of the author. Two subjects are discussed, Christ's teaching by parables and His object in using this method of teaching; and the precept, "let him deny himself and take up his cross." "There are few synoptic traditions," says Dr. Abbott, "that are more obscure as to their meaning and origin than these two." St. Mark's Gospel is taken as the starting-point of the discussion, not only because it is the basis of St. Matthew and St. Luke, but also because it has been less altered by early editors, and so lies nearest to the original thought. St. John's Gospel is throughout used by Dr. Abbott as explaining St. Mark. He is concerned to maintain the thesis that St. John frequently intervenes to interpret and supplement the Marcan tradition, and to place it in its right order. It is true that St. John nowhere mentions the word "parable," using instead the word "proverb," and also never mentions the word "cross"; but he constantly refers to the religious significance of the term, and thus helps us to understand St. Mark's teaching. Dr. Abbott argues that the Fourth Gospel regards all Christ's teaching to have been of the nature of parables and dark sayings, until the Spirit was given to the disciples after the Resurrection. "According to this view, Mark's tradition needed to be placed later . . . Mark's tradition is based on fact. But he has placed it before its time. The fact became fact after the Lord had risen from the dead."

The meaning of the command to take up the cross or yoke is really this—do service to the Son of Man and to all men. It is not a call to asceticism or death, but to a service of love. Now it is St. John who records the incident of the washing of the feet, and frequently in the Johannine writings Christians are reminded that they "owe it as a debt" to love one another, to lay down their lives for their brethren, and to bear the infirmities of the weak. "Are we not thus brought round by these stages of tradition from the Johannine precept, 'wash one another's feet,' to the Synoptic precept, 'take up the cross'?"

The substantial results which have been achieved in the matter of the Synoptic problem by years of patient study provide good grounds for hope that further assured conclusions will be reached, and that in particular the problem of the Fourth Gospel and its relation to the other three may be solved. Many will doubtless think that some of Dr. Abbott's suggestions are far-fetched and savour too much of subjective criticism, but none can deny that he has

made in *Diatessarica* a real contribution to New Testament scholarship. In particular has he taught us that the writings of the Evangelists can never be understood aright unless we set them against the background of contemporary thought and belief out of which they arose.

SCRIPTURE.

The Books of Chronicles. With Maps, Notes, and Introduction. By W. A. L. ELSMLIE, M.A. (4s. 6d. net. Cambridge University Press.)

The latest addition to the Cambridge series of commentaries on the R.V. deserves a cordial welcome. It is a scholarly and well written commentary on the *Books of Chronicles*. Mr. Elmslie has succeeded in a by no means easy task. It is somewhat difficult to make such a book as the *Chronicles* live and glow with interest; but Mr. Elmslie has achieved no less than this. An interesting section in the Introduction discusses the characteristics of Ancient Historical Writings, and the editor points out that *Chronicles* belongs to the didactic type, i.e. its author uses history in the interests of a religious theory. Mr. Elmslie shows that, though the chronicler's work is of no great value (though it possesses some value) for the period with which it professes to deal, its indirect value for the time in which its author lived (i.e. 300-250 B.C.) is very great. In this way it sheds abundant light on the growth of the religious institutions, the Temple worship, the development of popular religious instruction, &c. of the chronicler's own time. Another interesting point brought out by Mr. Elmslie is that the chronicler's work is probably dominated by a polemical aim: it seems to have been largely directed, as a vindication of the supremacy of Jerusalem and its worship, against the Samaritans. There is a good section in the introduction on the religious value of the book, and there are four excellent maps. We cordially commend the volume.

CLASSICS.

The Greek House. By BERTHA C. RIDER. With 53 Illustrations. (10s. 6d. Cambridge University Press.)

The content of this book is wider than the title implies. Based on a theory that one general type of house prevailed from the earliest Neolithic to the Hellenistic age, it studies the evidence between those remote periods. Much space is devoted to the Minoan and Mycenaean palaces. As an archæological monograph on the early house, it has a value apart from the theory which it endeavours to prove. Only the last two chapters deal with the houses of historic Greece. Here the interest of the chapter on the fifth- and fourth-century house lies in the rejection of the double court, the familiar arrangement of Becker and the *Classical Dictionary*, and the substitution of a single-court house giving access to both *andronitis* and *gunaikonitis*. The type of house revealed by the excavations at Priene and Delos (third and second century) is shown to support this view. A similar scheme is propounded for the Homeric house, and shown to fit archæological and textual evidence better than the double-court reconstruction familiar in ordinary textbooks.

ENGLISH.

Shakespeare's Industry. By Mrs. C. C. STOPES. (7s. 6d. Bell.)

This is a monumental work, showing great erudition, scholarship, and research. Teachers especially will find it a mine of wealth, and no student of Shakespeare and contemporary life can afford to neglect the book. Mrs. Stopes disclaims any intention of dealing with what she calls the "higher textual criticism," and in what is half an apology—surely quite unnecessary to any one who knows the patient care with which this lady has studied Shakespeare—she says, "I called for Shakespeare before I was able to pronounce his name." Although no defence of the book is needed, as it abundantly justifies its existence even in War-time, we take it Mrs. Stopes is fully conscious that many of her comparisons and elaborately built-up arguments have very little that may be called evidence in support of them, and many of her ingenious theories with regard to the dates upon which different plays—as, for instance, *A Midsummer Night's Dream*—were written, and the occasion, will be hotly contested by the school of pedants to whom such points are of supreme importance. Probably the most interesting chapter in the book to all readers except the Shakespearean scholar will be the one entitled, "Is Lady Macbeth really a Fiend-like Queen?" Mrs. Stopes's view of her as a "sunny little woman—bright, dainty, graceful, tender," has the merit of originality, for scarcely one of the great actresses who have essayed this creation has abandoned the traditional conception of a tall, dark, queenly, tragic being. Yet, though we are not able to accept Mrs. Stopes's view in its entirety, there are "points" in her plea, as the lawyers say, which "give one to think." On the whole we think, however, it is not

easy to accept her psychology. If we are to allow her standpoint, Lady Macbeth's share in the crime was due to the intense and passionate love she bore Macbeth, and her part in the tragedy would assign her from this standpoint that of the accomplice; whereas surely it is impossible to escape from the conclusion that Shakespeare designed to draw her as the stronger character, more driven by one overmastering impulse than Macbeth, and we feel this, too, is truer to human nature as we know it.

MATHEMATICS.

Improved Four-figure Logarithm Tables. By GEORGE McLAREN. (1s. 6d. net. Cambridge University Press.)

The author claims for his tables that they are simpler to manipulate and ensure, moreover, a closer approximation to accuracy than those in ordinary use. Obviously there is a gain in finding three out of the four digits of a given number on the left of the page in a four-figure table, since this arrangement makes it possible to do away with the "difference" columns; and this advantage in Mr. McLaren's form of tabulation is but slightly neutralized by the additional number of pages that the computer may have to turn over. The principal disadvantage in the new system arises from the fact that, unless and until it is generally adopted, a student accustomed to employ it would be seriously hampered if confronted in the examination room with the ordinary tables as his sole means of reference. A close comparison of the author's results with those of other lists of logarithms must be made before the claims to a higher degree of accuracy can be confirmed or refuted, but from random tests it appears that the *mantissae* given are reliable.

Elements of Algebra. Part I. By G. ST. L. CARSON, M.A., M.Sc., and DAVID EUGENE SMITH, Ph.D., LL.D. (3s. Ginn.)

This small volume, bearing the cachet of names so well known in the educational world, will commend itself to the notice of many. It is, moreover, a useful course in the subject, and aims at counteracting the tendency to "lowering of scholarship and an unhappy want of system" which has been a natural result of the reform movement, valuable as that has unquestionably proved itself. The authors have made a salutary experiment, seeking to combine the good in both the older and the newer methods of mathematical teaching, and it may well be anticipated that the new publication will supply a real need. The idea of building up a structure of algebraic knowledge on an arithmetical basis is by no means a novelty, but the prominence given to the formula in contradistinction to the equation is a characteristic feature.

Examples and Test Papers in Algebra. By W. J. WALKER, M.A. (With Answers, 1s. 6d.; without Answers, 1s. 3d. Parts II and III. Mills & Boon.)

A continuation of a series of similar exercises and test papers compiled to suit still younger pupils than those for whom the volume before us is intended. The range covered in the present little book includes those portions of a school course in algebra which follow the study of quadratic equations in one unknown, and are limited by the binomial and exponential theorems. The compilation places in the hands of teachers a quantity of material valuable for class purposes.

Hydrodynamics. Fourth Edition. By HORACE LAMB, M.A., Sc.D., F.R.S. (24s. net. Cambridge University Press.)

In the fourth edition of this standard work no change has been made as regards the general plan and arrangement, but occasional passages have been rewritten, and various interpolations and additions have been made, more especially in those parts dealing with physical applications.

Mathematics, from the Points of View of the Mathematician and of the Physicist. By E. W. HOBSON, Sc.D., LL.D., F.R.S. (1s. Cambridge University Press.)

An address delivered to the Mathematical and Physical Society of University College, London, giving a brief account of some of the causes which during the last century have brought about the separation of mathematics and physics. Essentially a claim based on historical grounds for the study of pure mathematics, not only for pure mathematics' sake, but also because of possible applications at present quite unforeseen.

Quartic Surfaces with Singular Points. By C. M. JESSOP, M.A. (12s. net. Cambridge University Press.)

In this work the author has rendered a valuable service to further research in this special branch of mathematics by co-ordinating the results at present known concerning quartic surfaces possessing nodes or nodal curves. Ruled quartic surfaces have been omitted in this account, and for Kummer's Quartic Surface and its special forms the reader is referred to the classic memoir of the late R. W. H. I. Hudson.

Biometrika. May, 1916. (10s. Cambridge University Press.)

Multiple Contingency with special reference to Partial Contingency (Karl Pearson)—Criteria for existence of Differential Death

Rates (Pearson and Tocher)—Probable Errors in Multiple Skew Regression (L. Isserlis)—Correlation of Cancer and Diabetes Death Rates (C. A. Claremont)—Homotoposis (J. A. Harris)—Probable Error of a Coefficient of Contingency (Young and Pearson)—"Goodness of Fit" in Statistics and Physics (Karl Pearson)—Novel Properties of Partial and Multiple Correlation (Karl Pearson)—"Best" Values of the Constants in Frequency Distributions (Kerstine Smith).

Alternating Currents in Theory and Practice. By W. H. N. JAMES. (10s. 6d. net. Cambridge University Press.)

This book has been written particularly for students, and with their limitations and requirements in view, the fundamental principles of the alternating current circuit are fully described before passing on to a consideration of the several types of machines and other appliances in which such circuits are employed. The calculus has not been used in the body of the book, but the author, in a laudable attempt to stimulate interest in this branch of mathematics, has used it in various foot-notes to illustrate the simplicity with which many problems can be thus attacked. The author, after dealing theoretically with inductance, resistance, capacity, power, and multiphase currents, passes on to describe the chief instruments concerned. Alternators, transformers, induction, motors, converting plant, switch gear, and the methods of high tension transmission are in turn brought under review. The book is admirably written, and is illustrated in the clearest possible way with 236 excellent figures.

ARITHMETIC.

- (1) *Workshop Arithmetic.* By FRANK CASTLE, M.I.M.E. (1s. 6d. Macmillan and Allied Houses.) (2) *Arithmetic and Accounts.* By S. CARTER, B.Com., B.Sc., and H. GARRATT, B.Sc. (1s. 6d. Macdonald & Evans.) (3) *Arithmetic.* Part I. By F. W. DOBBS, M.A., and H. K. MARSDEN, M.A. (3s. G. Bell.) (4) *A First Book of Arithmetic.* By S. LISTER, B.Sc. (1s. 6d. Macmillan and Allied Houses.)

(1) Mr. Castle's little work has been written specially for students training as engineers or as members of one or other of the building trades. The pages contain a small proportion of text for the guidance of the reader, but consist principally of a large collection of carefully selected and classified exercises, those suitable for students of a particular type being indicated by a distinctive letter. Clearly executed diagrams add to the value of the volume.

(2) *Arithmetic and Accounts* is another publication dealing with arithmetic in its practical aspect and enabling its readers to acquire much useful information in the subjects treated. With regard to the teaching of contracted methods in connexion with decimals, many will prefer to use the principle of reducing all operating decimals to their standard form in the first instance. The authors are to be congratulated on the interesting manner in which business and banking transactions are described.

(3) *Arithmetic, Part I*, by men engaged in the work of one of our principal public schools, seeks to make what is often looked on as a dry branch of study "useful, simple, and interesting." It is left to the teacher to furnish most of the necessary explanations, and we receive from the writers a valuable volume filled with exercises varied in character, and adapted for oral and written solution by the pupil. A large number of revision papers, the questions of which deal (a) with some particular portion of the subject, (b) with recapitulatory exercises and miscellaneous problems, correspond to the "extra works" of Eton.

(4) *A First Book of Arithmetic*, by S. Lister, B.Sc., is another of the many useful school textbooks issued by Messrs. Macmillan. An excellent special feature of this small volume will be found in the examples which lend themselves to the provision of subjects for discussion by the teacher with his class.

MUSIC.

Very First Violin Lessons. By JASPER GRAHAM. (J. Williams.)

A very useful book for beginners. The little tunes are at times rather over-burdened with accompaniment.

Forty-five Exercises (Spohr). (J. Williams.)

A reissue of some of the exercises from the well-known Violin School. Hans Wessely is responsible for the editing.

Norwegian Fantasia. For Violin, Solo, and Orchestra (or Piano). By ADAM CARSE. (J. Williams.)

An interesting work, based on three Norwegian folk melodies. Mr. Carse has given the solo instrument plenty to do. In the hands of an experienced player it should prove most effective.

Country Life. A Set of Easy Dances for the Pianoforte.

By ERNEST NEWTON (J. Williams.)

Mr. Newton always keeps educational requirements well in view when writing for children. A very effective pictorial cover adds to the attractiveness of this little volume.

Two Album Leaves. For the Pianoforte. By ALEC ROWLEY. (J. Williams.)

Two pieces of a conventional type. In the middle section the composer anticipates the return to the tonic key too soon. The result is far from pleasing.

Six Easy Pieces. By FRANK JEPHSON. (J. Williams.)

An issue in album form of Mr. Jephson's popular little pieces for the pianoforte.

A Mood-Phantasy. For the Pianoforte. By TOBIAS MATTHAY. (J. Williams.)

Some pianoforte players would find it difficult to follow Mr. Matthay in his varying moods, while others—provided they have the requisite command of tone, colour, &c.—will revel in unravelling the intricacies of this, his most recent composition. Given a good piano (and a good pianist), its effect is certain.

Beethoven Sonatas, Op. 90 and Op. 31, No. 2.

Two more numbers of the Analytical Edition which Mr. Stewart Macpherson is editing for Joseph Williams & Co. We wish Mr. Macpherson's endeavours had been more ably seconded by the printers and engravers. Faulty alignment, overcrowding, and indistinctness (this latter probably due to the paper), are some of the blemishes in what ought to be a first-class edition. It is not easy to understand why this should be so, other work by the same firm being excellently done—to wit, the *Mood-Phantasy* reviewed above; but then the price of that is 5s., while the two Beethoven sonatas are retailed at 1s. and 1s. 6d. respectively.

We have received from the firm of Joseph Williams:—School Examinations of the Associated Board, Primary and Higher Divisions; Advanced Grade; Local Centre Examinations:—*The Land of Joys* (Song), by LIONEL ELLIOTT; *Dreams in the Twilight* (Song), by ESTING WAYLAND; *Pierrot* (for the Piano), by ERNEST FARRAR; *Waltz-Melody* (for the Piano), by ERNEST AUSTIN; *L'Espérance* (for the Piano), by FELIX CORBETT; *Impromptu in F Minor*, by EDITH M. SAUNDERS.

From the Yearbook Press:—Two-part Song (*I have Twelve Oxen*), music by CHARLES WOOD; Unison Song (*The Holly and Ivy Girl*), arranged by CHARLES WOOD; Two-part Song (*Under the Green Hedges*), by F. W. WADELY; Three-part Song (*Spring*), by G. H. SMITH. We cordially recommend the above part-songs to the notice of schools.

HYGIENE.

- (1) *The Eyes of our Children.* By N. BISHOP HARMAN, M.A., M.B. (2) *The Prevention of the Common Cold.* By OLIVER K. WILLIAMSON, M.A., M.D. (1s. each vol. Methuen.)

(1) Both these books of Methuen's Shilling Library are adequate for the purpose, clearly printed, and their contents can be easily assimilated by all who possess average intelligence. There is a very great tendency to throw too much upon teachers; intelligent mothers should really also devote attention to books of this kind, for, as Dr. Scholfield observed recently, "women are the natural guardians of the health of the community." They have yet to wake up to the truth of this statement and to the necessity of their work embracing active surveillance of the food of the community in order that right nourishment be more prevalent and faked food less common. This, of course, should not excuse teachers in having insufficient knowledge of what average sight should mean, and how it should be protected in the schools by sufficient and correct lighting; by good print, including the right sort of paper and proper spacing; by plain colouring on the walls and such colours that shall neither tease nor afflict the eye (pale grey and green are best). The eye in children, like the rest of the body, is immature, and much can be done to develop it rightly. Poor feeding works out in poor eyes; there is every reason for levelling up children's diet and for levelling down grasping London dairies, who at the moment demand 6d. a quart for milk, the best food for producing good bodies—and eyes. Mr. Harman is struck by the coincidence of bad sight and malnutrition. He recommends sleeping in the dark. All observant persons know the need for this; all dullards, male and female, place the bed in front of the window, and some boast that they pull up the blind and draw back the curtains to enjoy their folly to the full. By so doing they not only fail to rest the eye, but positively fatigue it. The eyes of all children should be examined before they go to school and at regular intervals afterwards. A sick child should have recourse to books in great moderation; other amusements, such as clay-modelling, would rest the eye. The common notion that short sight is good sight and improves with age needs knocking on the

head; in especial, school life is apt to increase it. Sports are excellent for the eyes. Too much light, such as we suffered from in pre-war days from street lamps, shop windows, motor lamps, &c., is most injurious; it has a benumbing effect. Of course, lighting from the left is established, and school furniture should be light in colour. Mr. Geo. Jackson's rules for good writing receive the commendation they deserve.

(2) *The Prevention of the Common Cold* is a timely little volume, for rarely have cold and catarrh been so prevalent as in the winter of 1915-16. We suspect the aggregation of enormous numbers of men in camp has something to do with this prevalence, coupled with our ignorance of how to treat colds at the beginning, and of their real causes. No child should be allowed to attend school with a cold in the head. He needs to be segregated, the nose and throat to be treated with an alkaline solution to kill the wicked microbe he is harbouring in the upper parts of the respiratory tract. Cold is not entirely due to low temperature; as a matter of fact, Arctic explorers never have it, in spite of 50 deg. below zero, for the simple reason that the microbe cannot flourish in the Arctic zone. It is an infection of the mucous membrane, induced by mouth breathing, by some error in the surroundings, or mode of life. The micro-organism has not yet been discovered; it is probably one of an association of organisms of the so-called diphtheroid group. Where there is low nutrition—and there is a great deal in Britain owing to faked food, dear milk, wrong mixtures, too much sugar and salt—the conditions must be altered. To treat a cold is always unsatisfactory; the real aim must be to prevent it. Dr. Williamson lays stress on the eternal need of fresh air, baths, exercise, suitable clothing, especially thick boots and warm socks. He declares that the boots and socks have far better effects on a cold on the chest than the so-called protector. For that vast number of persons who cannot correlate cause and effect, and who will only go the length of removing a cold when it makes them (and others) uncomfortable, perhaps a nasal douche, the thorough cleansing of the nasal cavities, will be as good as anything. But it will resemble a recurring decimal until the real cause is hunted out. Teachers and parents who desire immunity from a tiresome malady, which reflects on the management of schools and similar institutions, may note that Dr. Williamson seems to agree with a well known American authority, Dr. Daniel Sagar: too much starch and sugar in the diet tends to produce catarrh. Young people should take their sugar in honey, dates, raisins, figs. Natural sugar is fairly easy to digest; artificial sugar presents grave difficulties, and is one cause of catarrh.

(1) and (2) *Luciani's Human Physiology*. Translated by FRANCES A. WELBY. Vols. II and III.

These two volumes continue the translation of *Luciani's Physiology*, which was begun by Miss Welby a few years ago, and they leave only one volume more to make the treatise complete. The translation is very good, the volumes are excellently printed and provided with numerous and admirable illustrations, so that they might be thought to offer everything that the advanced student of physiology could desire. Such a supposition is supported by the fact that this treatise has enjoyed a wide reputation on the Continent, and was translated from the Italian original into German many years ago. Unfortunately it suffers from a grave and irremediable defect. It is out of date. Anyone who wished to inform himself of the extent of our physiological knowledge some twelve years ago, when the book was first written, could not do better than consult this work, and he would find it afford him a reliable and extensive guide of the history of physiology up to this point. But physiology is a very rapidly extending subject, and most of the new results obtained by original investigation during the last ten years find no mention. A feeble attempt to bring the book up to date has been made by introducing a bibliography of recent literature at the end of each chapter; but even these bibliographies are very incomplete, and they are of very little use, as, with few exceptions, no mention is made of their contents in the text. To come to detail. Vol. II deals with the internal secretions, digestion, excretion, and the skin. The chapter on Internal Secretions is particularly incomplete, as this subject has made such tremendous strides within recent years. For instance, no investigations relating to the pituitary gland of a later date than 1905 are mentioned. The chapters on digestion are more satisfactory and include an account of the action of secretin on pancreatic juice flow, though it is true that some of the statements made are biased and incorrect. Still, no mention appears to be made of the fact that the trypsinogen of the juice is activated by enterokinase. In the chapters on excretion we are treated to the old and erroneous views concerning the creatinin excreted, and no literature of a later date than 1889 appears to be referred to. Vol. III deals with the physiology of muscle and nerve and of the nervous system. The chapter on muscle is specially out of date, and it makes no mention in the text of the recent work of the Cambridge School on the physiology

of muscle, and only a very incomplete mention in the bibliography. The physiology of the central nervous system is described very thoroughly, especially that of the cerebellum, on which Luciani has himself made many important investigations. It appears to be brought up to date more successfully than other subjects.

(3) But few words of reference are necessary to introduce the new edition of Huxley's well known *Lessons in Elementary Physiology*. The fact that the book has passed through six editions, and has been reprinted some forty times since it was first issued in 1866, is sufficient testimony to its merits. The present edition has been carefully and adequately brought up to date by Mr. J. Barcroft, and so may be regarded as a reliable guide to the present condition of our knowledge of physiology and histology. Doubtless its circulation will continue to extend for many years to come.

TECHNICAL.

Rutley's Elements of Mineralogy. Revised by H. H. READ, A.R.C.S., B.Sc. With an Introduction by G. T. HOLLOWAY. (3s. 6d. net. Murby.)

This excellent book has long enjoyed a high reputation and a steady sale among students of mineralogy. In recent years, however, it had fallen behind the rapid advances of that science, and the new points of view of economic workers were not reflected from its pages. It has now been practically rewritten, only a small number of paragraphs remaining unaltered, and, by the able hands of Mr. Read, has been transformed into what is easily the best small textbook of mineralogy on the market. The chapter on Crystallography, which formerly followed the German model, is now rewritten in accordance with the methods that find most favour among English and American teachers. A useful chapter on Optical Properties has been added, thus adding microscopical methods to those usually described in elementary books. In the description of Mineral species, the silicate, or rock-forming, minerals are all grouped together, and other minerals are dealt with under the heading of their chief metallic constituent. A valuable feature is the introduction to each group of minerals, which consists of a description of the element concerned, with special reference to its economic importance. In place of barren lists of localities, stress has been laid on the mode of origin and occurrence of minerals, and throughout the book the economic status of each mineral is brought into prominence. To students, prospectors, and mining engineers alike, this little book will prove a valuable companion in their work whether it be in the classroom and museum, in the field, or in the mine.

"Cambridge Technical Manuals."—*The Development of English Building Construction*. By C. F. INNOCENT, A.R.I.B.A. (10s. 6d. net. Cambridge University Press.)

The author of this work is Honorary Lecturer in English Architecture in the University of Sheffield. He has extended and amplified a series of articles which he wrote a few years ago for the *Building News*, and the result is a volume of extreme interest and merit. Apart from Mr. Addy's work on *The Evolution of the English House*, we know of nothing which gives a more adequate treatment of what may be called minor architecture as distinct from that associated with the ecclesiastical and fortified structure. Beginning with the simplest forms of primitive building, the development of modern construction is clearly shown. The same plan is followed in the treatment of walls, roofs, doors, and windows, and the final chapter treats of modern materials and methods. Throughout, the illustrations are of a most interesting and helpful kind, and the fact that Mr. Innocent has been able to obtain so many of these from the neighbourhood of Sheffield suggests the wealth of unregarded interest which may be found in the apparently commonplace houses of our villages. Presumably, the volume is intended for technical students, but we commend it to the notice of all who are interested in architecture, whether from the professional or amateur standpoint.

"Cambridge Technical Series."—*Domestic Science*. Part II. By C. W. HALE. (4s. net. Cambridge University Press.)

This volume forms the second part of a work which is intended to provide the groundwork of science required by students of domestic subjects. Such topics as fuels, ventilation, heating, lighting, water supply, foods, and cooking are adequately treated, no attempt being made to deal with them more exhaustively than will be necessary for a pupil in a senior school. The author provides many simple experiments in illustration of the subject, and shows throughout a competent knowledge of the requirements of those for whom the book is intended. A useful set of questions is appended to each chapter, and at the end of the volume a full set of examination questions will provide excellent practice ground for those who use the volume as a textbook. This is a purpose for which it is admirably fitted.

ECONOMICS.

- (1) *Business Methods and the War.* By LAWRENCE R. DICKSEE, M.Com., F.C.A. (2s. net. Cambridge University Press.)
- (2) *The Principles of Apprentice Training.* By A. P. M. FLEMING and J. G. PEARCE. (3s. 6d. net. Longmans.)
- (3) *Handbook of Employments in Liverpool.* Edited by F. J. MARQUIS, M.A. (1s. net. Liverpool Education Committee.)

(1) One of the most pressing problems after the War will surely be to increase the national efficiency. Already there are signs that the Government, no less than the industrial and commercial circles in the country, are keenly alive to its importance, and there can be little doubt, therefore, that the question of apprenticeship and vocational training will loom large in the public interest. Consequently it behoves teachers, who will clearly be greatly concerned in the matter, to be cogitating upon it; and they will find in Prof. Dicksee's four lectures much that is helpful for an appreciation of the importance and urgency of training. Prof. Dicksee, by reference to army methods, draws conclusions for the procedure which business and industry should follow. Drill is what he lays stress on, and drill is but another word for training.

(2) Only the general and broader aspects of the subject are dealt with in Prof. Dicksee's pages. A more detailed consideration will be found in Messrs. Fleming and Pearce's treatise. These two writers survey the present conditions of apprenticeship in this country, and suggest how they can be best improved. They are primarily concerned with the engineering trade, but their book applies to technical training generally. Apprenticeship, as it exists in England to-day, they describe as "chaotic," and any one who is at all acquainted with the facts will agree that the term is not too strong. Nor will their strictures on our elementary schools be regarded as unjust. English elementary education, they point out, does not provide a good training for artisan life, and one of the ways in which it errs is its utter failure to develop the co-operative faculty in children. Criticism, however, is only of value when improvements are suggested, and Messrs. Fleming and Pearce undoubtedly set forth some exceedingly useful proposals. The chapter reviewing the methods of industrial training in vogue in this country, the United States, Germany, France, Switzerland, and Norway is among the best in the book.

(3) Side by side with training there must also be direction. To this end publications such as that issued by the Liverpool Education Committee will serve a useful purpose. In this alphabetical list of *Liverpool Trades and Occupations, with a Schedule of Wages*, much valuable information has been collected. Turn to the entry "Bricklayers," and you find particulars of the number of Liverpool firms concerned in the industry, the number of their employees, the nature of the work, the conditions of apprenticeship, wages, hours of labour, and lastly, the classes available in Liverpool which would be of assistance to the budding bricklayer. So with scores of other callings. Teaching is of the number.

Industrial Law. By FRANK TILLYARD, M.A., M.Com. (10s. net. Black.)

Teachers and students of economics and economic history often come across many references to particular pieces of legislation that affect the lives of the workers. But the scope of the ordinary textbook does not allow of a more or less full treatment of legislative enactments such as, say, the Truck Acts, or the various Acts governing the employment of women and children in mines and factories, or even the Trade Union Act of 1871. The history of factory legislation has certainly been thoroughly well done, but a book treating of the Acts themselves was a desideratum. Prof. Tillyard has supplied such a volume. Industrial law has many points of contact with economic problems, and the book is intended primarily for economists. In addition to a general introduction to the subject of industrial legislation as a whole, various Acts are dealt with in detail, e.g. those relating to employers' liability, minimum wages, health and unemployment insurance, and industrial disputes. These will give some indication of the ground covered in the text; while in the appendixes, which take up nearly one half of the volume, there are actual quotations from the Acts themselves.

Trade Unionism. By C. M. LLOYD. (2s. 6d. net. Black.)

Mr. Lloyd has given us here a brief but interesting study on Trade Unionism. The book is likely to prove most useful as a book of reference, and contains a full bibliography and a wealth of information. Mr. Lloyd gives many interesting examples of the needs and difficulties of workmen of which Trade Unionism was the result. For instance, the Combination Acts passed in 1799-1800 show how men were persecuted and punished if they dared to bind themselves together to better their conditions. In 1810, nineteen

printers employed on the *Times* newspaper were sentenced to imprisonment, varying from nine months to two years, for quitting their work because they could not get an increase in their wages. A few years later seven scissor grinders of Sheffield were thrown into jail for three months for belonging to a club which gave out of work benefit and tried to keep up wages. Mr. Lloyd gives a most interesting résumé of the fight to remove this ban from the Trade Unions carried on by Francis Place, Hume, Owen, and others, and, although it was a Liberal Government in 1871 who passed the Trade Union Act, it was the Conservative Party in 1875 who really made this Act workable by withdrawing all the penalties for peaceful picketing, intimidation, and the like. From 1875 he traces the ebb and flow of the movement, the advent of Socialism, the investigations of Charles Booth and others, the rise of the Labour Party, and strikes, until he comes to 1900, when the great Taff Vale Railway dispute occurred. The High Court here decided that a Trade Union could be held liable for an act committed by any of its officials, the effect of this being that employers could soon smash up the different Trade Unions by collaring their funds. This was put right in 1906, when the Trades Disputes Act was passed freeing a Trade Union and its funds from such possibilities. Mr. Lloyd, however, is somewhat mistaken in giving all the credit of these victories to the Labour Party, when, as a matter of fact, it was the Liberal Government in 1906 (who were returned with a very large majority, which freed them from any necessity of propitiating the Labour Party unless they chose to do so) who passed the Trades Disputes Act. Two or three years later we had the famous Osborne Judgment, and here again we find ourselves unable to agree with Mr. Lloyd as to the claims of the Labour Party to having carried this reform. Mr. Osborne—a Liberal in politics—strenuously opposed the right of his Union to levy its members or contribute from its funds in support of the Labour Party.

MISCELLANEOUS.

Finn and Samoyad, the Bear Hunters of the North. By L. EDNA WALTER, B.Sc. (Black.)

This book is one of a series, *Life and Legends of other Lands*. The Chief Inspector of Reformatory Schools has recently recommended that up to the age of fourteen the literature should be the same for both sexes; the namby-pamby, goody-goody books provided for girls are calculated to bring religion into contempt. Girls often prefer boys' books. Now, Miss Walter's *Finn and Samoyad* is excellent for both sexes, for young and old. The twelve coloured illustrations arrest attention, especially that of the bear chasing the poor seal, whose expression betrays that he has realized his fate.

The Fascination of Belgium. By L. EDNA WALTER. (1s. 6d. net. Black.)

This little book is memorable chiefly for its architectural illustrations from photographs taken before the War. Thus, the frontispiece presents the Louvain Hôtel de Ville, and half of them are now relics of the past. There is a refined sketch of the political history of Belgium, but more space is devoted to the growth of the guilds, of town halls, and belfries. This is mixed with gossip on town life and industries. As the author suggests, the advent of peace will need a new and wholly revised edition.

The Girls' School Yearbook. The Official Book of Reference of the Association of Head Mistresses, 1916. (5s. net. Yearbook Press.)

Besides the schools represented by the A.H.M., Part II contains other public secondary schools, defined as those which possess a governing body. We take it that the reason for its not appearing before August is in order to include a report of the Annual Meeting.

The Holidays: Where to Stay and what to See. (1s. 6d. post free. Walter Hill.)

A useful compilation, including in its two thousand pages some hundreds of illustrations, and, besides much statistical matter usual in guide-books, a good deal of interesting information for the angler, the antiquary, and the artist. A preface claims that the book has been in past years the means of solving many holiday problems, and the claim is not unjustified.

"Courtenay Pollock" War Game.

This consists of a set of models to represent armies and navies and their units, together with a "battleground" in the form of maps mounted on wood. The game can be played by individual opponents or by "alliances," and will be a valuable adjunct to the work of an O.T.C. or a School Cadet Corps.

Great Annual Sale

OF

SECOND-HAND BOOKS

AND

NEW COPIES OF RECENT BOOKS.

The Annual Sale at The Times Book Club is the book-lover's opportunity. It is the largest sale of the year, more than 150,000 volumes being offered at prices which are usually one-third and often only one-quarter of the original cost. There will not be for another year such an opportunity of filling your shelves with the best books at bargain prices.

HINTS ON FRENCH SYNTAX.

By **FRANCIS STORR**, B.A. Camb., Officier d'Académie, Occasional Inspector to Board of Education, Scottish Education Department, and Central Welsh Board; Examiner to Oxford and Cambridge Joint Board, Cambridge Higher Locals, Scottish Education Department, Civil Service Commission University of London, &c., &c.

"A capital little book, which we have no hesitation in recommending to French students."—*The Pall Mall Gazette*.

"Mr. Storr's Hints are to the purpose. They are intended for schoolboys, but grown-up people who wish to avoid making elementary blunders in either writing or speaking may use them with advantage."—*The Athenæum*.

Extract from Author's Preface.—At the request of several Masters and Mistresses, who have used the *Hints* with their classes, I have added an Appendix with easier examples. In them more French words are supplied, and more references are given to the rules which they illustrate. The method of pitfalls is rightly discredited, and it is generally allowed to be a more fruitful discipline to prevent a pupil from making blunders than to rap him over the knuckles for making them. Even with the references the happy-go-lucky boy and the cocksure boy will both be caught tripping.

L.L.A. DIPLOMA FOR WOMEN.

THE attention of Candidates is
drawn to the ordinary and Honours Diplomas
for Teachers, which are strongly recommended as
suitable for those who are or intend to be teachers.

Examinations are held at Aberdeen, Birmingham,
Blackburn, Brighton, Bristol, Cardiff, Croydon,
Devonport, Edinburgh, Glasgow, Hull, Inverness,
Leeds, Liverpool, London, Manchester, Newcastle-
on-Tyne, Norwich, Nottingham, Oxford, St. Andrews,
Sheffield, Swansea, and several other towns.

Information regarding the Examinations may be
obtained from the SECRETARY, L.L.A. Scheme, The
University, St. Andrews.

**THE ASSOCIATION OF UNIVERSITY
WOMEN TEACHERS.**

59 CAMBRIDGE STREET, HYDE PARK, W.

Recommends highly qualified Teachers and Lecturers
with University qualifications (Degree or equivalent).

Secretary—Mrs. B. BROUGH.

Calling hours—Wed., 3 to 5 p.m.; Sat., 11 to 1 p.m.

TEACHERS' DIPLOMAS

The COLLEGE OF PRECEPTORS holds Exam-
inations of Teachers for the Diplomas of Associate,
Licentiate, and Fellow of the College in London,
Belfast, Birmingham, Bristol, Cardiff, Cork, Dublin,
Glasgow, Leeds, Liverpool, Manchester, Newcastle-
on-Tyne, and Plymouth. The Theory and Prac-
tice of Education is an obligatory subject for
each grade. For Regulations apply to the SECRE-
TARY, College of Preceptors, Bloomsbury Square,
London, W.C.

PRELIMINARY EXAMINATIONS
FOR
MEDICAL, DENTAL,
AND
PHARMACEUTICAL STUDENTS

The COLLEGE OF PRECEPTORS holds Pre-
liminary Examinations in March, June, September,
and December. All the Examinations are held in
London, Birmingham, Blackburn, Bristol, Cardiff,
Edinburgh, Glasgow, Leeds, Liverpool, Manchester,
Newcastle-on-Tyne, and Nottingham. For the June
and December Examinations there are other Centres,
including Aberdeen, Blackpool, Brighton, Carmar-
then, Cheltenham, Croydon, Ealing, Exeter, Margate,
Plymouth, Portsmouth, Sheffield, Southampton,
Southport, Sunderland, and York. For Regulations,

THE
BERGMAN ÖSTERBERG
PHYSICAL TRAINING COLLEGE,
DARTFORD HEATH, KENT.

Trustees:

Sir GEORGE NEWMAN, M.D. (Chairman).
 Major WALDORF ASTOR, M.P.
 Dr. CHRISTOPHER ADDISON, M.P.
 Lord SHAW OF DUNFERMLINE.
 The Marchioness of SALISBURY.

Principal:

Miss M. H. MEADE, B.A. (Moral Sciences Tripos).

Vice-Principal:

Miss A. WIKNER (Royal Cent. Inst. of Gymnastics, Stockholm).

The College was opened in 1885, and was the first of its kind in England. Students are prepared to be teachers of Scientific Physical Education on Ling's Swedish System. The Course extends over two years. It includes the study of Anatomy, Physiology, Theory of Education; the Theory and Practice of Gymnastics, Massage and Medical Gymnastics, Dancing and Outdoor Games. Students practise teaching in schools in the neighbourhood. The College stands in its own ground of 15 acres, in a beautiful and healthy locality close to Dartford Heath.

The demand for mistresses of physical training holding the Diploma of this College is at present far in excess of the supply.

The course begins in September. Further particulars may be obtained on application to the SECRETARY.

BERGMAN ÖSTERBERG
UNION OF TRAINED GYMNASIAC TEACHERS.

Ling's Swedish System.

Aim of the Union: To advance the cause of Physical Education on scientific lines.

In placing members of this Union as Teachers in Schools, careful and discriminating choice is exercised, and the exact requirements of each School specially considered.—PHYSICAL TRAINING COLLEGE, DARTFORD HEATH, KENT.

SOUTHPORT PHYSICAL TRAINING COLLEGE.

Beautifully situated near the Sea in healthy surroundings.

President:

Admiral Lord CHARLES BERESFORD, K.C.B., M.P.

Principals:

A. ALEXANDER, F.R.G.S.; Mrs. ALEXANDER.

The Staff consists of Medical Lecturers and experienced teachers in every branch of Physical Training, including a Swedish Mistress from the Royal Gymnastic Institute, Stockholm.

GIRLS of good education are trained as scientific teachers of Physical Training to qualify them for appointments as Gymnastics, Games, and Health Mistresses in schools and colleges. The course, extending over two years, includes:—Physiology, Anatomy, School Hygiene, First Aid and Sick Nursing, Remedial Exercises and Massage, Swedish Educational Gymnastics (Ling's System), Outdoor Games (Hockey, Net-Ball, Cricket, Tennis, Badminton, &c.), Dancing (including Old English and Morris Dances), Swimming and Rowing, Organized Recreative Games for School and Play-Ground.

Diplomas and Gold Medals are awarded to successful students.

The demand for capable teachers of Physical Training is steadily increasing, and students of this College frequently obtain appointments before completing their training.

HEALTH STUDENTS.

Cases of spinal curvature or general physical weakness are received in residence, and treated under medical supervision.

For Ladies as Gymnastic and Games Mistresses, and Medical Gymnastic Teachers and Masseuses.

THE Course is two years, and includes a large number of subjects, making the training very valuable and enabling each Student to specialize in some particular branch.

It includes Educational and Remedial Gymnastics, Fencing, Rowing, and Swimming. All Games are taken to a very high standard, and Dancing is also made a speciality. Also it includes two subsidiary subjects—Needlework and Elocution.

Lectures and lessons are given in Anatomy, Physiology, Pathology and Orthopedics, Ambulance, Home Nursing, Theory of Movement, &c.

For prospectus apply—COLLEGE SECRETARY.

THE INCORPORATED BRITISH COLLEGE of PHYSICAL EDUCATION.

5 & 7 Johnson Street, Notting Hill Gate, London, W. (Founded 1891.)

EXAMINATION for MEMBERSHIP (including the Theory and Practice of British and Swedish Educational Gymnastics), LICENTIATESHIP, and for the **SCHOOL TEACHERS' DRILL CERTIFICATE** are held thrice annually—in February, June, and November respectively but additional (Local) Examinations for School Teachers are held under certain conditions. Full particulars to be obtained on application.

Education Committees, Schools, Colleges, and others requiring qualified INSTRUCTORS of either sex should communicate with

FRANK H. GELLING, Hon. Secretary.

THE LING ASSOCIATION (Of Trained Teachers of Swedish Gymnastics).

FOUNDED 1899.

Hon. Secretary: Miss HANKINSON, 67 Shaftesbury Road, Crouch Hill, London, N.

EXAMINATIONS held for Swedish Gymnastic Teachers' Diploma.

The Association keeps a list of certificated Gymnastic and Games Mistresses.

For Terms of Membership, Conditions of Examination, Entrance Forms, Syllabus, &c., apply to the HON. SECRETARY.

"Good and Bad School Postures."

Published by the Ling Association. A series of ten Drawings, showing the effects of faulty positions in standing, writing, sewing, &c. No School should be without them. Mounted on cards, 15 in. x 20 in., with cords ready for hanging. Price 5s. per set, post free in British Isles, from Messrs. SHERRATT & HUGHES, 33 Soho Square, London, W.

BEDFORD PHYSICAL TRAINING COLLEGE.

LING'S SWEDISH SYSTEM.

Principal: Miss STANSFELD

(President of the Ling Association of Gymnastic Teachers).

The object of the College is to train Students to enable them to become Teachers of Gymnastics and Games in Schools.

The Course of Training extends over two years, and includes the Theory and Practice of Gymnastics on the Swedish System, Massage and Medical Gymnastics, Anatomy, Physiology and Hygiene, Dancing, Lacrosse, Lawn-tennis, Hockey, and Cricket.

An educational centre like Bedford affords special facilities for practice in Teaching and professional coaching in Games. Swimming and Boating in the summer.

For Prospectus apply—SECRETARY, 37 Lansdowne Road, Bedford.

CHELSEA PHYSICAL TRAINING COLLEGE FOR WOMEN.

(SWEDISH SYSTEM.)

Head Mistress: Miss DORETTE WILKIE.

Three Year's Diploma Course of University Standard. The exceptional training in Class Teaching and Lecturing afforded to students at this College enables them to secure appointments of the highest standard.

Apply for Prospectus to SECRETARY (Room 85), S.W. Polytechnic Institute, Chelsea, London. Telephone: Western 899.

THE INCORPORATED GYMNASTIC TEACHERS' INSTITUTE.

(Founded 1897.)

Offices: 25 CHALCROFT ROAD, LEE, LONDON, S.E.

THE Institute is an Examining Body of Teachers of Gymnastics, &c., and Fencing, and its membership, obtainable by Examination only, consists of Fellows, Members, and Associates.

The Institute also holds Examinations for Elementary School Teachers' Certificate for Physical Training.

Students are Trained as Teachers and for the Institute's Examinations.

Full particulars of the Examinations, &c., may be obtained from the Hon. Secretary, Mr. T. WILLIAMS.

Principals of Schools and Colleges requiring Trained and Certificated Teachers of Drill, Gymnastics, &c., or Fencing, should apply to the Hon. Secretary.

SPEECH TRAINING.

Miss ELSIE FOGERTY

has resumed her Classes.

VOICE PRODUCTION,

BREATH MANAGEMENT,

CURE OF SPEECH DEFECTS AND

FAULTS OF PRONUNCIATION,

READING ALOUD, AND

RECITATION.

PRINCIPAL ROYAL ALBERT HALL SCHOOL OF SPEECH TRAINING AND DRAMA.

Complete Training Course for Teachers.

Miss FOGERTY undertakes Class Teaching and Lecture Work in Schools, also the Management of Dramatic Performances.

Lecture Recitals given of Plays set for the Local Examination.

School Plays completely prepared.

ASSOCIATION OF TEACHERS OF SPEECH TRAINING.

Head Quarters: ROYAL ALBERT HALL, KENSINGTON GORE.

President:

Miss ELSIE FOGERTY, 29 Queensberry Place, South Kensington.

Secretary:

Miss WELLESLEY-READE, 44 Fairholme Road, West Kensington, W.

Trained resident or visiting teachers sent to any part of England. Assistants also undertake residential treatment of delayed speech, stammering, or other difficulties. Physical exercises for chest development, breath control, or defective articulation given by trained teachers. Advice on speech training given. Transference of connexions undertaken.

A leaflet containing all principal Tone and Articulation Exercises, together with "Examples" for the practice of each vowel sound, may now be obtained. Price 2d. each, or, to Members of the Association, 1½d. each. Apply—Miss Wellesley Reade.

X School Transfers and Partnerships are on pages 691, 727, and 728; other School and Teachers' Advertisements are continued on pages 723, 725, 727, 728, 729, 730, 731, 732, 733, 734, and 735. **X**

Messrs. TRUMAN & KNIGHTLEY, Ltd.,

Scholastic Agents.

MANAGING DIRECTORS:

S. A. TRUMAN. JAMES HEARD, B.A.
(Westminster and Trinity College, Cambridge).

This Agency is under distinguished patronage, including that of the Principals of the majority of our leading Public and Private Schools.

ASSISTANT MISTRESSES.

Messrs. TRUMAN & KNIGHTLEY introduce University and other qualified English and Foreign Mistresses and Teachers of Special Subjects in Secondary, Public, and Private Schools. *No charge is made to Principals, and no charge to candidates unless an appointment be secured through this Agency.*

ASSISTANT MASTERS AND TUTORS.

Messrs. TRUMAN & KNIGHTLEY introduce University and other qualified English and Foreign Masters and Tutors to Schools and Private Families. *No charge is made to Principals, and no charge to candidates unless an appointment be secured through this Agency.*

LADY MATRONS AND HOUSEKEEPERS.

Messrs. TRUMAN & KNIGHTLEY introduce well qualified and experienced Lady Matrons and Housekeepers to Boys' and Girls' Schools. *No charge is made to Principals, and no charge to candidates unless an appointment be secured through this Agency.*

TRANSFER OF SCHOOLS AND PARTNERSHIPS.

Messrs. TRUMAN & KNIGHTLEY undertake all negotiations connected with the Transfer of Schools and Partnerships. All communications are treated in the strictest confidence. *No charge is made to Purchasers, and no charge to Vendors unless a sale or partnership be effected by this Agency.*

Any negotiations entrusted to Messrs. TRUMAN & KNIGHTLEY receive prompt and careful attention, every effort being made to save clients as much time and trouble as possible.

CLASSBOOKS FOR THE PRELIMINARY EXAMINATIONS.

Arithmetic, Preliminary. By AUGUSTUS BARRACLOUGH, M.A., Second Master at Bournemouth School. 1s. 6d. With Answers, 1s. 9d.

This book provides a course of Arithmetic suitable for pupils of ten to fourteen years of age. Great pains have been taken to set the methods out as clearly and concisely as possible.

"The chapters are clearly written, carefully arranged, and accompanied with a plentiful supply of examples and exercises."—*School Guardian*.
 "Quite admirably suited for its purpose."—*London Teacher*.

Chemistry, Preliminary. By H. W. BAUSOR, M.A., late Scholar of Clare College, Cambridge. 1s. 6d.

A course for beginners dealing with the leading principles of chemical theory. "It is an excellent little book, and will make a clear understandable foundation for a systematic treatment of Chemistry in the higher forms."—*Educational News*.

"Nothing is taken for granted, everything is carefully and simply explained."—*School Guardian*.

English Course, Preliminary. By A. M. WALMSLEY, M.A., late Senior English Master, Middlesbrough Boys' High School, 1s. 6d.

A beginner's course in Grammar and Composition based mainly on inductive methods.

"An English Grammar embodying in general recommendations of the Joint Committee on Grammatical Terminology. Unnecessary matter is excluded, and the author has kept in view the real aim of grammar, namely, 'the production of good English.'"—*Athenæum*.

History of England, Preliminary. By M. K. ELLIOTT, Honours in the Historical Tripos, Cambridge, and M. S. ELLIOTT, M.A. With Illustrations. 2s.

"An interesting book well illustrated, with chapters on social life, and some excellent maps."—*Journal of the Assistant Masters' Association*.

French Course, Preliminary. By H. J. CHAYTOR, M.A., and H. E. TRUELOVE, B.A. 1s. 6d.

"This elementary course supplies an excellent first year's work, well arranged on systematic lines, with due regard to the advantages of the Direct Method, and also to the necessity for thoroughness in the acquirement of the language. Free use is made of black type for emphasis."—*Athenæum*.

Geography, Preliminary. By E. G. HODGKISON, B.A. 1s. 6d.

A book for beginners, containing Elementary Physical Geography, and outline of the Geography of the World, and the Geography of the British Isles in detail. "This book bears the stamp throughout of the skilful practical teacher who combines a sound knowledge of his subject with an equally sound knowledge of the needs and capacities of the pupils for whose use the book is intended."—*Teachers' Times*.

Geometry, Preliminary. By FABIAN ROSENBERG, M.A., B.Sc. With or without Answers. 2s.

A book for beginners containing a judicious blending of practical and theoretical work. Insists throughout on reasoning from first principles. "Will prove distinctly helpful to the beginner in the study of geometry."—*Bookseller*.

Gospel of St. Luke (Preliminary Edition). Edited, with Introduction, Notes, and Maps, by Rev. J. F. RICHARDS, M.A., and Rev. T. WALKER, M.A. 1s.

"Altogether a very complete and workmanlike edition."—*Secondary School Journal*.

Gospel of St. Matthew (Preliminary Edition). Edited, with Introduction, Notes, and Maps, by Rev. T. WALKER, M.A. 1s.

"There are copious Notes, and two useful Maps, together with an excellent Introduction. It is one of the best of such volumes we have seen."—*Schoolmaster*.

OCCASIONAL NOTES.

WE devote this month to Modern Languages what many of our readers will consider a disproportionate space, but the position to be assigned to them in the school curriculum is beyond dispute the question of the hour, and more will, with justice, complain that the half has not been told. Some of the accredited experts have been asked to express freely and fully their opinions, but others of equal weight (*e.g.* our head mistresses) have still to be heard. The difficulty is that none can yet tell for what manner of schools he is prescribing, and it is needless to reaffirm the doctrines that this Journal has for very many years maintained. No reform will satisfy us that only enforces a modern language as a supplement or addition to the curriculum. "There are many ways to Rome," and schools whose leaving age is sixteen will often be well advised to confine their linguistic studies to English, the fundamental study for all. "The glory that was Greece and the grandeur that was Rome" can be adequately, though not fully, conveyed in English translations. The youth who knows two tongues "has two hearts," but he must know them as literatures, not as the bilingual Swiss guide or the *commis voyageur*. The oral method has proved itself the best entrance to a modern language, but hitherto, as our contributors admit, it has had little influence on the teaching of the highest forms or the Universities.

THE Leeds Education Committee, at their last meeting for the municipal year (October 25), discussed complaints made by members regarding the understaffing

of elementary schools. Alderman Clarke, who presided as Chairman, stated that there was at present one teacher for every 42 scholars on the roll, or, if head masters were eliminated, one for every 50. At one national school Mr. Benton had found a single teacher coping with a class of 87 boys, a combination of Standards VI and VII, and this had been the usual thing since the holidays. The Chairman made no attempt to rebut this and similar complaints, or to suggest any remedy. In his opinion, "the staffing of the schools generally was extremely satisfactory"; "the elementary schools were better staffed than those of other large centres." We know not what are the peculiar difficulties with which Leeds has to contend, but we sincerely hope that Leeds does not represent the temper and attitude of English municipalities. Sixty boys in a class, pronounced by the Chairman "all right," and 87 (the two top forms of the school) committed to a single teacher, accepted with a promise that the already overburdened head master should be called upon to teach Standard VII! We turn to a record of the proportion of masters to boys in secondary schools, taken some five and thirty years ago, and we find that in the Leeds Grammar School there was one master for every 16 boys. The working man has some reason to complain. No wonder that juvenile crime is on the increase.

THE London Education Committee are exhibiting a commendable caution in consenting to the introduction of Russian into the curriculum of their schools.

Russian in L.C.C. Schools. They have laid down conditions which ought to be some safeguard against scrappiness and inefficient teaching.

The first of these conditions is that a properly qualified teacher be obtained. On this we need say nothing. Equally important, perhaps, is the third rule, that enough time should be given to the language to make substantial progress possible. We hope that this will be interpreted in such a way as to prevent pupils substituting Russian for some other subject for just a year, or even two years. If we are to have Spanish and Russian in our schools, let them be taught for such length of time and with such breadth and thoroughness that they will be of real educative value. The danger is that, in response to the demand for useful subjects, schools will attempt Russian without providing the means or the time for sound instruction, and will succeed in giving nothing but a smattering which will be of no value for either education or business. For this reason we deprecate the fourth condition laid down by the Committee, which confines instruction in the language to those who are likely to need it in their future careers. This stamps Russian at once as a purely utilitarian study. Anything less educational than running up a hasty jerry-built structure of Spanish or Russian for purely commercial purposes we can hardly imagine.

FOUR girls' schools, we are glad to learn, have declined the grants of the London County Council rather than submit to the humiliating conditions which that body sought to impose upon them. The cause of the quarrel will no doubt be remembered. The Council not only required that the schools should make retrenchments in their expenditure, as was quite right they should, but demanded that they should be allowed to dictate the par-

The Aided Schools and the L.C.C.

ticular form which economy should take. The reply of the Governors of the four schools was that they recognized the necessity of cutting down expenses, but preferred to settle the particulars themselves. We do not see what other answer any self-respecting body of Governors could give. To accept the demand of the Council would be practically to place the whole organization of the school in their hands—a position which was certainly never intended by Parliament. We hope that the four will soon grow to forty. The Council could not afford to quarrel with all the old secondary schools of London, for if they did they could not find a sufficient number of places for their scholars. Schools get quite enough official supervision in these days, and it is intolerable that unauthorized bodies should claim the right to interfere in every detail of their administration.

THE London County Council class teachers are rejoicing because the terminal examinations conducted by the head teacher are to be abolished. An article in the *Times Supplement*, "from a correspondent," explains the causes of their dissatisfaction with the system by which the head teacher is required to

examine each class every term and report upon it to the Education Committee. The Principal's examination was resented as that of an external examiner; an internal examiner—that is, the teacher himself—is the only person who can fairly test a class. Hence we arrive at the conclusion that each teacher should report on his own work. The head teacher's examining is branded as "persistent police surveillance," "detective functions," and so forth. The curious thing is that the Education Committee hope that the abolition of these examinations will lead to more helpful reports from head teachers on the work of their subordinates. But how is the Principal to report if he may not examine or check for himself the reports of his assistants? Will the teachers like that better than the old system?

AS our readers well know, we have never been enamoured of the archmagistral despotism, which is the working constitution of most secondary schools. But we confess that we find it hard to accept the position that a

principal should never examine a class taught by one of his assistants. The adoption of such a doctrine would entirely destroy the authority of the head master over the teaching. And the demand that the teacher alone should test a class and report on its efficiency is a trifle cool, even if it be conceded that he have "the aid of some external expert." No man in this world is fitted to be the sole and final judge of his own work; no servant of the State ever is, or ought to be, allowed to be so. The demand is really unworthy of the elementary teachers; it argues a lack of virility and self-confidence. No one ought to be afraid to submit his work to the examination of an unknown expert. On one point, however, we sympathize with the teachers; it should certainly suffice if, after a period of probation, the Head were required to send in a report, possibly after consultation with an Inspector, if he finds anything seriously amiss with the work of an assistant.

THE case of the Ottawa Separate Schools, on which the Judicial Committee of the Privy Council gave judgment on November 2, is of interest alike to the

The Language Question in Ontario.

statesman, to the student of the constitution of the Empire, and to the educationist. The first will find food for reflection in the picture of a young democracy in America confronted with the same problem as the military despotisms of Europe. The constitutional lawyer will note that the legal system of the Empire is so complex that not even in education, a subject placed specially under its authority, is a province of Canada absolutely free. The educationist will regret this disturbing element in education. We confess that we have much sympathy with the French minority in Ontario in their opposition to the policy of the Ontario Government, which is seeking to make English the only medium of instruction in all schools. On the other hand, there is something to be said for what we believe to be the view of the English majority in Ontario, namely, that, Quebec being predominantly French, Ontario ought to be predominantly English. We should hope, however, that this end may be gained without the suppression of the French language in schools. We should be heartily glad to hear that a compromise satisfactory to both parties had been arrived at.

THE Mathematical Association has followed the example of the Public School Science Teachers in making an attempt to define the place and value in education of the studies in which they are

Mathematical Education.

interested. The manifesto issued by their Teaching Committee claims that pupils should acquire from a course in mathematics an elementary knowledge of the properties of number and space, a command of mathematical method, facility in applying mathematical knowledge practically, and some understanding of the part played by mathematics in industry, in the practical arts, in science, and as a means of social organization and progress. This we may regard as the practical aim of the teacher of mathematics. Further, the Committee think that the pupil should acquire valuable habits of precise thought and expression. Psychologists evidently have not yet succeeded in persuading teachers that the doctrine of formal training is all moonshine, though we remember that Sir Henry Miers, when speaking at the Oxford Conference in the summer, expressed the opinion that laboratory work had no effect on the general powers of observation. Lastly, the Teaching Committee claim that a course of mathematics should produce an appreciation of organized abstract thought as one of the highest and most fruitful forms of intellectual activity. We welcome the manifesto as a pronouncement on the scope and purposes of mathematics in a modern education, but we hope it will be supplemented by a definite statement of the ground to be covered at each stage. Abstractions will not appeal to Governing Bodies.

MR. CLUTTON-BROCK, in his eloquent address at King's College on the Humanities, reaffirmed a truth that our pundits of to-day are inclined to forget or to ignore. Either they plead that the Humanities are essential to the making of efficient and intelligent citizens, without whom we cannot hope to hold our own in the international struggles either of peace or of war; or else they tell us that one end of education is to help us to enjoy

the more refined pleasures of life, and amongst these pleasures are literature and art. All this is quite true, and it is very desirable that it should be said, but Mr. Clutton-Brock reminded us that neither efficiency nor enjoyment is the highest aim of the student of the Humanities. The value of the Humanities as "the things that permanently satisfy the spirit of man" lies in themselves, and can be realized only by faith. This is a hard doctrine for teachers, for the teacher in his business has to be constantly explaining and defining, and when he comes up against something that can only be apperceived or felt, he is inclined to turn away from it. Yet it is as true now as ever it was, that the highest things cannot be analysed; they can only be felt. It is here that the artist, the saint, and the seeker after truth join hands. Each may, with the musician, say, "Others may reason and welcome; 'tis we musicians know." The favourite paradox of the classicist about the studies "which are useful just because they are useless" is true; his mistake is in thinking that it applies more to Latin and Greek than to other studies.

YET, if the classicist, when he meditates on his paradox, forgets modern literatures, it is partly the fault of the modernist. For the modernist rarely makes, and more rarely demonstrates, this prerogative for the modern humanities. Yet, if modern language scholars cannot in good faith, or through faint-heartedness do not, make good that claim, modern studies will always rank second to classics. For ourselves, we should say that the greatest poets and writers of France, Germany, Italy, and England embodied spiritual experiences of the race no less rich and lofty than those of which Greek literature is the record.

MR. CLUTTON-BROCK'S excellent story of his *viva voce* in English Literature puts the problem of examining in poetry better than whole pages of "Occasional Notes" could do. The object of the candidate is, as the lecturer bluntly put it, to pass the examination, and not to speak the truth. Therefore, in any question which asks for criticism or appreciation, his natural impulse will be to say, not what he thinks, but what he thinks the examiner thinks he ought to think. Now, appreciation is the soul in reading literature, especially poetry; and information, understanding of the language, comprehension of the author's aim, his method of achieving it, and the like, while they may be helps towards appreciation, are, after all, but the limbs and outward flourishes of the study. And so we examine only the limbs, and not the soul. If, for instance, in answer to a question which asked for an appreciation of *Paradise Lost*, a candidate began, "I think Milton is a dull and pompous old fogey; give me Scott and Macaulay," the examiner would probably mark him down as being lacking in literary taste. Which, no doubt, he would be; but then it is much better to be lacking in literary taste than to be lacking in a sense of truth. And the boy or girl who really appreciates Scott and Macaulay is much more likely to have a genuine love of poetry, even if he hates Milton, than the boy or girl who has merely shown that he remembers what he has been told about the merits of *Paradise Lost*.

"THAT every girl who entered for the Oxbridge Local Examination had passed in the Honours list was a fact of which the school might well be proud." It is a remarkable fact certainly, but whether it should redound to the credit or discredit of the school depends entirely on circumstances. If the whole of the top form went in for the examination, and no particular preparation was bestowed upon them, then the achievement was most creditable. Only in that case we should want to know what is the standard of this examination in which quite ordinary girls can get Honours. Distinction that everybody gets ceases to be distinction. To declare a whole class to be of exceptional merit is something like a contradiction in terms. But it may have been that only picked girls went in for the examination, or that, if average girls entered, they were most carefully and scientifically crammed. In that case the school has no reason to be proud of the result, and the whole thing was nothing but unabashed window-dressing. The provincial Mayor, from whose speech-day oration our text is taken, and his audience probably, made no attempt to analyse the dazzling statements that were laid before them. That is the weak point of the "Locals"—the public does not know how delusive the results may be.

THE *Cambridge Review* reports in full the sermons delivered from the University pulpit, and we have read with the attention it deserves the discourse on "National Repentance," by the Regius Professor of Hebrew. Dr. Kennett's admonitions were directed almost wholly to statesmen and politicians. If, as the newspapers averred, the church had failed in its duties, its failure consisted in not warning the people against their false prophets, and denouncing the wire-pullers, at least when their ignorance and sordid aims had been detected. War, he confessed, must come so long as German lawlessness was dominant; but, had the Government frankly told the nation what it must have known before the War, we should at least have made adequate preparation and so saved thousands of precious lives. In the ideal State, as the preacher pictured it, there will be no parties, and every voter will have put before him the whole case on which he has to give his decision. (The one modern hero, the Micaiah of the text, was the late Lord Roberts.)

We do not presume to criticize, but we cannot help contrasting an address that we heard the same week by Dr. Dugald Clark, F.R.S., Chairman of the Royal Society of Arts. In his opinion, England was never so well prepared for war as in 1914. Whatever the sins and failures of England, and of English statesmen, it was neither greed of gain nor party politics that forced her into the War. Let us humbly confess with the preacher that we have gone astray, done things that we ought not to have done, and still more, left undone things that we ought to have done, but repentance does not mean recrimination. The name of Viscount Grey will live in history, not only as a wise and patriotic statesman, but as an honest man in whom there was no guile. The Bishop of Carlisle, in his *Nineteenth Century* article on the "New Education," points out a more excellent way. While insisting on the primary importance of a religious education, he frankly admits that the current creed of churchmen requires considerable revision before it can be fitted into a genuine national system.

Honours in the Locals.

The Claims of Modern Literature.

Prophets false and true.

Examinations in Literature.

LOCAL AUTHORITIES.

THE Education Committee of the County Councils Association has formulated a series of resolutions dealing with the education and instruction of children and young persons "after the War," regard being had particularly to the interests of those (a) who have been abnormally employed during the War, (b) who cannot immediately find advantageous employment, and (c) who require special training for employment. The Committee has not attempted to deal with the first two questions, and, regarding the third, supports opinion in favour of raising the school-leaving age, abolishing partial exemption, and of providing facilities, by means of part-time day courses and other forms of continuation classes, for vocational training. In the opinion of the Committee, the time has now been reached when the Legislature might boldly pass a measure requiring that in all boroughs and urban districts, after full-time day attendance has ceased, attendance at day or evening continuation schools for a specified period equivalent to from six to ten hours per week should be compulsory up to the age of eighteen, the employers being obliged under penalties to give the necessary facilities, including a corresponding reduction in the hours of labour.

After the War.

THIS is a revolutionary proposal—especially for the County Councils Association—and perhaps it was adopted by that body either because the members did not understand it or because it was thought to be impracticable and therefore harmless. In view also of the fact that the Association is confined to representatives of administrative counties, who are not chiefly concerned with the larger boroughs and urban districts, the opinion is not very convincing. As regards rural districts, the Association, while recognizing that there is "a most urgent" need for further education between the ages of fourteen and eighteen, do not consider it practicable for continuation classes to be universally provided. It would be interesting to know the grounds upon which the members of the County Councils Association representing rural constituencies have been convinced of "the most urgent need" for the further education of the agricultural population. If "demand" is the measure of "need," the information hitherto available points to quite a different conclusion.

Further Education.

THE other day at a meeting of an industrial conciliation Board, when a claim for increased wages was under consideration, one of the representatives of labour produced convincing evidence of the increased cost of living in the receipted bills for household requisites purchased by his wife from the co-operative stores in July, 1914, and October, 1916. The articles purchased, which did not include flour and potatoes, were precisely the same in quantity and description for both occasions. In 1914 the total cost amounted to 10s. 4d.; in 1916 the total was 17s. 6d. The bills had not been "prepared" for the purposes of the claim, but were discovered by the witness more or less by accident. Nearly all classes of workmen (except perhaps soldiers and agricultural labourers), and large numbers of employers (including farmers) are now securing higher wages or larger profits which enable them to meet the daily increasing cost of living. But there remains the large class of persons in receipt of fixed salaries whose resources, if they have been augmented at all, have not advanced in anything like the proportion of other sections of the community.

The Cost of Living.

THE wages of Northumberland miners, for instance, which are regulated by the average selling price of coal, have advanced 50 per cent. during the past twelve months, so that the amount of work which, a year ago, produced, say £2 a week, now receives £3. In the same county a clerk paid £2 a week before the War now—with a war bonus—earns £2. 6s., or, under the most favourable conditions of a munition establishment, £2 10s. This inequality in the consideration extended to salaried employes as compared with wage earners is not confined to any particular part of the country, and among employes with low salaries who, perhaps, have, generally speaking, received least and suffered most, are the teachers. The reason is, no doubt, due chiefly to the fact that there are so many of them. Of the expenditure of Local Authorities on education the salaries of teachers represent about 80 per cent. of the total charge. If, therefore, out of an annual expenditure of £200,000, salaries of teachers absorb £160,000, a modest war bonus of 10 per cent. represents a somewhat formidable addition to local rates.

Fixed Incomes.

ON the other hand, a 10 per cent. bonus to the teachers receiving £2. 10s. a week—and this was about the average salary of some 22,000 men certificated assistants two or three years ago—would give him only another

Teachers.

5s. a week. If, under normal conditions, he may be assumed to spend half his income on food and fuel, the commodities which, according to the evidence of the Labour representative quoted above, could be purchased before the War for his £1. 5s. will now cost £2. 2s. 6d. In a word, the 10 per cent. gives him only 5s. to meet an additional expenditure for bare necessities of 17s. 6d. It is a serious position of affairs, and one which the Board of Education and all Local Authorities ought to deal with immediately.

LOCAL Authorities have now received a memorial from certificated teachers, in which their claims to consideration are forcibly advanced. For more than two years, it is pointed out, teachers have endured the strain of rising prices, and have seen other sections of the community receiving increases of remuneration while their salaries have remained on a pre-War basis. The teachers ask for an immediate advance of £25, not as a "War bonus," but as a permanent addition to their salaries. It is hardly to be expected that Local Authorities will be prepared to deal with amendments to their scales of salaries at this time, and it is probable that the teachers would have been better advised had they appealed for special consideration to meet the exceptional conditions now prevailing. However, they have a strong case for an advance, and if they do not get all they want their claims will no doubt be dealt with sympathetically.

The Teachers' Claim.

SEVERAL authorities have already granted subsidies to teachers with very low salaries, and some have faced the general question, and adopted a scale applicable to teachers of all grades. But in no case, so far, has any authority accepted the principle of paying a war bonus regardless of the teacher's present rate of remuneration or responsibilities. The Education Committee of the County Borough of Newcastle-upon-Tyne has adopted the following scale:—Married teachers receiving under £120 a year, 5s. a week; £120 to £150, 4s.; £150 to £250, 3s.; the bonuses for unmarried teachers being 2s. 6d., 2s., and 1s. 6d. a week respectively. In the case of a married employe whose wife or husband has a separate income, earned or unearned, the incomes are added together, and, for the purposes of the bonus scheme, regarded as the income of one employe. These regulations are not particularly generous, but they serve to indicate what is being done, and the response which the teachers may anticipate to their appeal for an all-round increment of £25 to their salaries.

A "War Bonus."

SCIENCE NOTES.

THE wide and prolonged discussion at conferences and in the press as to the position of science in schools should at least lead to a better understanding of the function of school science. In order to reach even this modest goal it will be found necessary to distinguish between the meanings ascribed to the word "science": meanings which vary according to the object of the inquiry. When one considers the nature of human knowledge in its genesis and dissemination, the connotation of "science" is so broad that nothing less than the philosophic attitude and method is included. When one debates the school time-table, the word "science" is habitually used in so narrow a sense as to exclude mathematics. It is, therefore, necessary to clear thinking that speakers and writers should indicate whether they use the words "science" and "scientific" in the broad or narrow meaning. Undoubtedly harm has been done to school education by the scholastic habit of thinking of science as merely chemistry, physics, and biology. The divorce of mathematics from science is an evil—and an unnecessary one.

Science and "Science."

WHEN the list of members of the Government Committee on the teaching of science was first published, we drew attention to the absence of any science mistress connected with secondary schools. We have heard that more than one educational association has asked the Government to remedy this most serious omission. We know that answer has been made that, for reasons of economy, the Committee had to be kept small. After returning that answer, the Government appointed two more men, and now a third, Dr. Henry Head, F.R.S., has been added. We can only reaffirm our opinion that the Committee will not be satisfactorily composed for the purpose of dealing with science in girls' schools until a science mistress is included.

The Science Committee.

THE practical applications of biology demand far more serious consideration than they have received in the past. The raising of crops, the management of gardens, the prevention of insect plagues, the food supply of

The Need for Naturalists.

the sea, are of first-rate importance, and an increased supply of trained naturalists competent to investigate and advise upon such industries is nationally indispensable. Our hopes for the future rest upon the increase of teaching of the right type. This implies first-hand observation, the habit of experiment, and the power to make quantitative experiments.

At the forthcoming Conference of Educational Associations a meeting

January Meetings.

will be held by the School Nature Study Union, on January 3, when Dr. Harold Wager, F.R.S., will discourse on "The Response of Plants to Light." On the 6th the Association of Science Teachers will hear a presidential address from Miss E. R. Saunders, of Newnham College, followed by a lantern lecture by Mr. Kilburn Scott, on "Nitrates from Air." At the Teachers' Guild Meeting, on the preceding Tuesday, Prof. R. A. Gregory will speak on the "Possible Educational Value of Kinemas." The Education Reform Council Meetings will be presided over by distinguished scientists, viz., Sir Alfred Keogh and Sir Henry Miers. All these meetings will be open to all members of the Conference. Prof. Gregory will also open the discussion at Eton, where the Public Schools Science Masters meet on January 3 and 4, on "Science for the Rank and File." Other subjects to be discussed are "Technical bias in science teaching in schools," and "The place of the textbook in science teaching," the opening speakers being Mr. E. R. Thomas and Mr. G. N. Pingriff respectively. These discussions will follow an address by the President, Prof. H. H. Turner.

QUIGLEY.

QUIGLEY'S first appearance in the school was somewhat meteoric. He presented himself abruptly at the master's desk long after lessons had commenced and announced simply, "I'm a new lad!" New he certainly was in many respects—from the school point of view—and more than one face was stealthily flattened against the glass partition of an adjacent classroom in order to get a view of the new scholar. Even the teacher who came round to reprove their eager curiosity could not forbear a long, lingering look.

He was a tall, well-developed boy of eleven, with a frank, open face and deep blue eyes. An ancient coat, the tails of which flapped dutifully against his heels when he walked, a long pair of snuff-hued trousers curling into numerous folds below the knee, and two roomy shoes of odd sizes, the tops of which were charitably hidden by the overhanging trousers, completed his attire. A strip of narrow cloth slung crosswise over his shoulder and precariously held by trouser buttons on each side constituted Quigley's solitary tribute to the canons of respectability. A thick thatch of ruddy hair, variously wisped, testified to the absence of caps in Quigley's world.

"Skoo Board officer told me I'd better be gerrin' in somewhere—seen me three weeks sin' playin', so e's got me name down," explained the boy further.

It appeared that Quigley had already attended eight different schools during various periods of his youthful life, mostly in classes at the bottom of his respective schools. His own father was dead.

"He was a good un he was, an' looked after me an' me mother," observed Quigley; "I've 'ad two more sin' then. Second was tidy good—when 'e worked. Used so get drunk every Satdy. Brought 'im to 'is death that did—got killt by a tram. He was drunk all right, but they said it was accidental. This third un's a reglar bad un. Won't work, won't do nowt! Tried to give me mother an' me a good 'idin', 'e did—but we gev it 'im proper—so he's stopped that game; 'e's started a-doin' odd jobs, that's why we're livin' 'ere."

Although he was remarkably intelligent, Quigley's formal studies had been greatly neglected, and he was therefore installed in a class mainly composed of eight-year-olds, to their evident interest.

Quigley did not appear again at school until a week had elapsed.

"Ave bin waggin' it!" he announced candidly; "couldn't come to sku till me clothes was mended."

His trousers had been lopped off to the knees, one leg being cut shorter than the other, while his coat tails had also been pruned considerably. In addition, he was provided

with a second brace, and a pair of well worn ladies' boots several sizes too large for him.

Upon this occasion he attended school three days before lapsing again; and it was not until he had been supplied with some cast-off clothing and boots by some of the older boys that he began to take an interest in the school games. Thereafter his progress was steady, if slow. Having proved himself incontestably superior to most of his school fellows in physical activities he began to make up lost ground in subjects calling for the exercise of close mental application.

When Quigley had been attending the school about twelve months he was reported for violently assaulting two of the biggest boys in the senior class. As the two stood whimpering at the master's desk, with gory noses and rapidly blackening eyes, the culprit arrived.

"Is this true?" demanded the master, turning to Quigley.

"Yes," he admitted, in a voice trembling with anger. "The cowards! I showed them a skylark's and a green linnet's nest, and they promised not to touch them; and they've stolen all the eggs out of one and killed all the young ones in the other. Didn't you?" demanded Quigley, turning suddenly upon the two boys, who quailed as he approached them.

After this incident Quigley became one of the acknowledged leaders of the school, and a reliable champion of the weak against the strong. All his spare hours were spent in scouring the neighbouring country for rare flowers, ferns, grasses, and mosses. Birds' nests of all kinds were known to him, and woe betide any venturesome stealer of their contents, for he had a deadly and uncanny gift in tracing such culprits, and his punishments were invariably heavy. His services were constantly requisitioned by the teachers when specimens were needed for Nature-lesson purposes, and it happened one day that, as the class was examining with deep interest one of these specimens, the chief Government Inspector came in. He was a keen enthusiast in all forms of Nature study, and it was not long ere he and Quigley were deeply engaged in a discussion of the rare plants and flowers of the district, the teacher and class listening with interest. At the close of a lengthy conversation, Quigley was commissioned to obtain certain specimens for the visitor on the following day; and when these were duly forthcoming, to the Inspector's delight, the boy received some very handsome compliments. As a result the school received such a glowing report upon the excellence of its Nature Study activities that the members of the staff were profoundly embarrassed.

"Of course, it's Quigley!" observed the chief; "and the only thing we can do is to try to live up to it."

* * * * *

Quigley called at school in khaki the other day. He was a fine figure of a man—tall, well set-up, and handsome. His eyes were blue and fearless as of old, but the master did not recognize him until he smiled.

"They've made me a sergeant!" he announced, grinning genially.

He had been through Mons, and all the trying times which followed during the retreat. Left in charge of a small party while his officer went out to collect stragglers, Quigley had been surrounded by a party of Germans. "But they didn't know we had a machine gun!" chuckled he. It appeared that Quigley's knowledge of the country had proved eminently useful during the operations of the retreat. "They wanted me to have a commission," he said diffidently, "but I told 'em I'd do more good as a sergeant. I knew my schoolin' wasn't good enough for an officer's job. I ought to have made more of my school days."

Quigley's face was tanned; there were tell-tale little lines under his eyes which told of terrible experiences; and he had the keen, haunting expression which marks the man who has faced the fear of death during prolonged periods.

"What is the thing which has struck you most during all your campaigning?" inquired the master.

Without hesitation came the reply: "The way the birds sing through it all—just as if there was no such thing as war. I fear nothing when I hear them—it's marvellous how they cheer you up," said Quigley.

H. LEATHER.

THE MIGRATION OF PLANTS AND ANIMALS.

(Continued from page 672.)

ANOTHER of the most characteristic of Italian plants at the present day is the *Agave Americana*, with its prevailing shade of dull dark grey and the so-called Opuntian cactus; these plants have run riot on every shore of the Mediterranean, and seem to suit so precisely the colouring of the South Italian rocks and the *petite culture* of the peninsula that they would seem to be genuine native productions. Yet these plants were introduced from America at the end of the sixteenth century. The cypresses which rise so tall and stately and seem specially designed to stand out in majestic relief against the dazzling summer sun of southern Italy, are alien immigrants from the mountains of far-off Afghanistan. This tree was closely bound up with religious observances, for it was the sacred tree of the Zendavesta, of the fire-worshippers, of whom the modern representatives are the Parsees of India. The votaries of that religion saw in the slim, heaven-pointing figure of the graceful cypress a likeness to the shape of the flame which rises heavenward, and as the religion of Iran spread to the westward, so did the accompanying cypress. Our island of Cyprus takes its name from this tree.

The olives, whose dark green sets off the arid yellow of parched Calabria, tempting one to think that they must have been set there by a special Providence to relieve the eye, are aliens from Palestine and Syria, and have now made themselves at home in distant Australia. The date palms which the tourist sees in the monastery of S. Bonaventura in Rome had their origin in the delta of the Euphrates and the Tigris, and it is some satisfaction to reflect that it seems probable that Bassorah dates will in future be imports from a British town. Cherries were introduced into Italy by Lucullus, the conqueror of Mithridates, after he had destroyed the town of Cerasus, near Trebizond. The Moors, during their long domination of Spain, notably increased the flora of the coast of the Mediterranean, and introduced many plants whose original home must be sought in Asia, such as the lemon, the pomegranate, the date palm, saffron, and many others; they introduced silkworm breeding into Spain and Sicily, they planted the papyrus, the cotton plant, and the sugar cane on Italian soil. It is true that the two latter plants have not found the climate suited to their permanent growth or spread, but it is none the less true that the contribution of the Moors to modern civilization opened up the enormous traffic in cotton and sugar between Europe and the West Indies, which has followed the Moorish acclimatization of these plants which have become such an important part of modern imports.

The Turks are not generally credited with the promotion of civilization in any part of the world, but, to do them justice, they have greatly enriched our European flora. They seem to have acquired in their primitive home, Turkestan, a great love for gaudy and flamboyant flowers, such as those which characterize that warm and sunny country, and they brought these with them on their migration into Europe. Of these flowers the most striking, alike for its beauty and for its wide popularity, was the tulip, christened in Italy after the Persian word *dulband* (a turban). The first direct notice which we possess of the tulip in Europe dates from the latter half of the sixteenth century when Gesner, the celebrated botanist of that century, saw a specimen in the garden of a rich patrician of Augsburg. The Dutch have notoriously made a speciality of tulip culture, and have produced many new varieties, some of which fetch enormous sums. We are likewise indebted to Turkey for the lilac, the Oriental hyacinth, which came to Venice from Bagdad, and for the imperial lily (*Fritillaria imperialis*)—originally a Persian flower—for the

ranunculus, the balsam, and the stock. To the Turks also we are indebted for several trees, such as the horse-chestnut, a tree which is said to have taken its name from the fact that the Turks cured their horses' coughs with its fruit.

From America, North and South, we have received so many gifts, which we have already acclimatized, that they would require a whole chapter to themselves; nor is the supply yet exhausted, for many parts of the great southern continent are even yet unexplored, and orchid collectors, among others, hope to add rare specimens to their collections from this source. The wild vine (*Vitis Labrusca*) that charms us by its autumnal ruddy hues, but, unlike its congener, beloved of Bacchus, which in ages long since passed flourished wild in the Caucasus, produces no fruit to cheer the heart of man, is at home on the banks of the Mississippi. Other gifts from the western continent are the Lombard poplar, the North American acacia, the tulip tree, and the handsome and fragrant magnolia, a native of the tropical America, which has, however, accommodated itself to our less genial climate. For our contribution to the civilization of America, of wheat, cattle, and horses, we have received the turkey, maize, the potato, tobacco, and the Opuntian cactus, which forms such a striking feature in the flora of the Mediterranean and has come to be looked upon in the countries adjoining the coasts of that sea as indispensable to the diet of man and animals as the potato is to more northern nations.

The guinea fowl (*Gallina Africa*) occupies a singular place in the history of our domesticated birds. It was known to the ancient Romans and Greeks as a delicacy imported from Africa. Captain Speke, in his description of his expedition in search of the sources of the Nile, speaks of this bird as the commonest of the fowls that he met with. The Roman writer Varro speaks of guinea fowls as of a new importation, and characteristically regards the fashion of serving them up at table as a sign of degeneracy. But with the fall of the Roman Empire all mention of the guinea fowl ceases; the Middle Ages seem to have been ignorant of its existence. After a thousand years the Portuguese discovered it anew in their explorations of the coast of Africa and introduced it into Europe. The guinea fowl has been introduced to our great Dominions under the Southern Cross, and there is every reason to hope that it may multiply and become a useful addition to the sportsman's bag in Australia, for it roosts in trees and therefore cannot be easily attacked by snakes, as partridges and pheasants unfortunately are attacked.

It is pretty certain that most of the animals and birds which were worth domesticating have been domesticated, but it is worth noting that the ancients seem to have made attempts to domesticate some few birds and animals which we have discarded. We know from the pictures on Egyptian monuments that the natives of Egypt had tamed a large waterfowl of the heron kind to be as companionable as our domestic fowls. We know, too, that the Romans kept cranes, storks, swans, and, of smaller birds, partridges and quails in the courts round their houses, partly for their amusement and partly for the table. After the advent of Christianity the faithful were forbidden to eat storks, to which birds a special sanctity was attached, though the interdiction extended to beavers, hares, and horses. In 757 A.D. Pope Zachary writes to St. Boniface: "Jackdaws, crows, and storks are forbidden food to Christians, but beavers, hares, and wild horses (*equi silvatici*) are even more to be avoided." At the present day we look to distant countries to replenish our larders with game. Paris sends to Algiers for its partridges, Leadenhall Market offers for sale countless willow grouse from Norway and Sweden, partridges and hazelhens from Russia, and even from far Manchuria, and crates of rabbits preserved by cold storage come to us from Australia. Grouse, on the other hand, are exported in the same way to the countries under the Southern Cross, and they fetch large prices, as may be expected when we reflect that our red grouse is peculiar to the British Isles.

COLONIAL AND FOREIGN NOTES.

FRANCE.

We will lay any odds that Berlin is watching our attitude towards Continuation Schools as carefully as our prevision for trade after the War. We will lay any odds that

Berlin chuckled when, a few weeks ago, an important Conference passed a solemn resolution that employers should allow their employes up to the age of seventeen years to attend continuation classes. So far have we got after twenty years of propaganda—twenty years in which Germany has probed and practised Continuation with ever-increasing earnestness! While England slumberously observes that if children are to go to school their employers must let them go, France is waking up. *L'Educateur* (VIII, 3) publishes an article by M. Salomon on "L'apprentissage et l'enseignement social," which exhibits French opinion. At present, we learn, out of 600,000 adolescents engaged in industry or commerce, only 30,000 are receiving vocational instruction. Manual work must be rehabilitated by being accorded a place of honour in the primary school. A *préapprentissage obligatoire* (stage of generalized vocational instruction) for those from twelve to fourteen years of age should be established. In this stage pupils would wisely begin to specialize according to their aptitudes. But vocational instruction alone is not enough: "S'il importe de préparer à une profession toute l'adolescence, il faut aussi cultiver tout l'adolescent"—Vocational instruction for all the adolescent, and for every one of them complete education! That must be the war-cry in England as in France, where the Government is moving. It is reported that a "projet général d'enseignement post-scolaire obligatoire" (a general scheme of obligatory Continuation) is one of three subjects submitted by M. Painlevé, Minister of Public Instruction, to be studied by the Conseil supérieur. At whatever conclusions the Conseil supérieur may arrive, it will bring to bear on the matter what our Board of Education has never shown in respect to it—intelligence!

Let it not be thought that we fling cheap accusations at tongue-tied authorities. We ask a pertinent question. **And the "Ladder."** Has the Board during the last twenty years written on the slate of each new Minister of Education the words: "S'il importe de préparer à une profession toute l'adolescence, il faut aussi cultiver tout l'adolescent"? Or, when did it begin to write them? And surely the Board should lay before Ministers and other politicians such information as might enable them to speak intelligibly on educational topics. Your Minister begins with "National Education"; in the next sentence he is off to the "Ladder." Now whilst the "Ladder" (up the rungs of which merit climbs to eminence; the theory of it is a theory of *selection*) may properly and conveniently exist within a system of National Education, the "Ladder" is no substitute for National Education—when offered as a substitute, it becomes an object of derision. Curious the difference between England and Germany! *Freistellen* (free places) there have met with little favour, the parent who pays higher-school fees in order that his son may serve as a One-year Volunteer or study at the University being jealous when the same privileges are gratuitously or cheaply got by the children of the poor. Here *Freistellen* are balm for the national conscience. They help us to conceal from ourselves that we are keeping the home-fires of Industry burning with the fat of our children. As we have been told lately, 90 per cent. of the boys and girls in England who reach the age of fourteen get no further education. In the remaining 10 per cent. are included, be it remembered, the chosen few who are climbing the steps of the "Ladder" beyond the primary stage. The step from the primary to the secondary school in France—for France, too, has some sort of "Ladder"—is the second of the three subjects referred by M. Painlevé to the Conseil supérieur. Under the rubric "Corrélation entre les enseignements primaire et secondaire" it forms the theme of an article by M. T. Suran in the *Revue Universitaire* (XXV, 8). M. Suran, who is himself a member of the Conseil supérieur, has certain administrative changes to propose. Most interesting to us is his revelation of the present state of affairs in France. Whilst in principle secondary education there is open to all whose natural gifts are above the common, it was found that of 100 *boursiers d'internat* (boarding-scholarship holders) in *lycées* and *collèges* 21 were the children of primary teachers (already exempt from day-school fees) and 40 the children of Civil Servants or petty officials; hardly more than 5 were the children of peasants and about 7 the children of working men. Truly an admirable "Ladder"!

The third of the three subjects put by M. Painlevé before the

Secondary Education for Girls.

Conseil supérieur is Reform of the Secondary Education of Girls. He proposes not a revolution, but an adaptation to present needs. The subject is examined, also in the *Revue Universitaire* (XXV, 8), by Mme. Suran-Mabire. She sees that the learned lady remains a woman. Sewing must not go! "Supprimer la couture ferait bondir, non sans raison, toutes les familles. Une femme, fût-elle avocat ou médecin, a toujours besoin de coudre un bouton, de raccommoder un bas, et, si elle devient mère de famille, de broder une collerette." France, we know, looks to the Baccalauréat as a chief sanction for the Secondary Education of its girls. But there are others as yet undiscovered. If only our Board of Education could be got to study Sanctions!

GERMANY.

If, as we have said, Germany has no absolutely watertight bulk-head between primary and secondary school, she has nevertheless a barrier insuperable enough. Just here foreign critics have seen a weakness; for so the higher learning and State careers are kept from the poor, to be bought by the well-to-do. Just here she is beginning now to suspect a flaw. In 1914, a short time before the War, Kerschensteiner, at the *Allgemeiner Deutscher Lehrertag* at Kiel, obtained a vote in favour of the reorganization of the school system upon the basis of a unifying of the school. The *Einheitsschule* ceased then to be a chimera. Men of authority, such as Lietz, Rein, and Natorp, gave it their support. And now, looking to the future, many Germans see in it a possible source of increased strength. The position may be made clear by means of a letter, written in March of the present year, to the *Vossische Zeitung* by Rudolf Eucken.

Eucken admits the need of a thorough reform: the right of the children of the rich to have access, solely because they are rich, to middle and higher culture must be definitely abolished. Radical or moderate reformers, he says, alike herald the same solution—one school up to twelve years of age for all children of every social class; then secondary education reserved for those of more than common gifts, and covering six years instead of nine. But the Radicals wish that the selection should be made by the School itself, without appeal, and that the resource of secondary education got from private schools or private teachers should not be open to parents; the Moderates hold that the School, not entitled to pronounce finally, should but advise the parent, and they would allow private education to remain with unimpaired liberties. Common to both parties is the contention that the secondary school should draw its pupils from the primary (not from a preparatory school, *Vorschule*); that its task should be to continue and perfect what the primary school has begun—a task to be completed in a much shorter time than the present secondary school requires for its work. But Eucken sees difficulties. It is uncertain whether the proposed system would not lower the general level of attainment; whether teachers would not be overweighted with the responsibility imposed on them by the duty of selection; whether natural gifts are to be justly and finally estimated by school success; whether the new school would not mean the destruction of many precious traditional standards; and whether there would not necessarily spring up beside it a crowd of private rivals, giving birth to a new social caste. The *Einheitsschule* is itself an unsolved problem, and not the solution of a problem.

The Report of the Proceedings of the *Deutscher Lehrerverein* at Eisenach in June exhibits strong support for the *Einheitsschule*. That the abolition of the present *Vorschulen* (preparing in three years for the secondary school) would not swamp the primary schools is proved by the fact that in Prussia in 1914 there were only 36,674 *Vorschüler* to more than six and a half million pupils of the *Volksschule*. The Socialists are hot for the unified school. What the ultimate decision of Germany, where there is much deep-rooted attachment to the present system, will be, we cannot say. Important is the growth of opinion that the secondary school, giving a literary education, should be freed from the presence of those for whom a literary education is inapt. We may assume that, if the reform is consummated, the discarded elements will be provided for in *Fortbildungsschulen* (continuation schools). War has brought those trusty educators, the lathe and the forge, into prominence.

UNITED STATES.

New York State has established a Military Training Commission, constituted of the Major-General commanding the National Guard, a member appointed by the Board of Regents, and one appointed by the

Military Training in Schools.

Governor. This Commission will recommend to the Board of Regents the establishment in schools of "habits, customs, and methods best adapted to develop a correct physical posture and bearing, mental and physical alertness, self-control, disciplined initiative, a sense of duty, and the spirit of co-operation under leadership." In appearance the object is that approved by the now famous Resolution of the National Education Association: a military training "strictly educational in its aim and organization." To the more pacific of the Americans, however, it is sheer militarism—a scheme to be met with hot protests and firm resistance.

Germane to certain discussions in Europe is an article in the *School Review* (XXIV, 8), headed "Making the High School Democratic." Words recently uttered by a high-school man are quoted with approval:—"Our mission is not scholarship but service, not books but boys, not culture but citizens, and in America always was, though we who should have known it best were ignorant of it. No city collects its taxes and supports us for the care of anything but its children. We are no skimmers of the community's cream, but the caretakers of the youth. We are not perpetrators of a classic culture, and no one hires us so to be; but we are in the business of helping boys to grow to men, girls to women, all able and disposed to advance the general good." In New York City the enrolment in high schools has risen in ten years from 30,000 to 80,000. Such a growth, says the writer of the article, should not be discouraged by any diagnosis in advance that children are not mentally equipped to shine in scholarship.

The United States continues to test education with the balance and the foot-rule—although there are things which cannot be weighed or measured. For example, a chart has been prepared to indicate the different relations that exist between scholarship, that is to say, success with school studies, and increase in height and weight (*Journal of Educational Psychology*, VII, 7). This is a specimen of the results obtained: "Boy F has a positive correlation between scholarship and weight increment for three years, and between scholarship and height increment for one year only. Boy J has a negative correlation between scholarship and height increment for three years, but scholarship and weight increment are negatively correlated during one year only. For Boy U the scholarship and the height increment have a mixed relation." Statistics of the height and weight of the Fat Boy in *Pickwick* at various stages of his career would still be interesting had they been preserved. Yet we would not seem to speak lightly of inquiries which may prove ultimately to be of real scientific value.

NEW ZEALAND.

New Zealand is a cheerful land, and its Education Report for 1915, the first year in which the new Education Act was operative, is cheerful in tone. It was war-time, yet it was found possible to carry on the work of education with but little hindrance. If many teachers enlisted, their places were filled and no schools had to be closed. Economy was prudence; but if progress was in some directions hampered for lack of means, the children were learning precious lessons in patriotism and self-sacrifice. Teachers were graded on a new and satisfactory system; salaries showed an upward tendency. There was an increase of 37 in the number of public primary schools. With an attendance of 90 per cent. of the roll New Zealand gave an example to other Dominions and to the home countries, even Scotland being surpassed. The admirable *School Journal* completed its ninth year of issue. Four medical inspectors and eleven physical instructors were continually at work, devoting much time to the instruction of students in Training Colleges. Elementary handwork and higher manual instruction were carried on in an increased number of schools. The National Endowment of land yielded more than £55,000.

Secondary education was communicated in (37) secondary schools, (61) district high schools, (8) technical high schools, (10) Maori continuation schools, and in private institutions. Per 10,000 of population 105 were receiving some form of secondary education as against 98 in the previous year. New Zealand is famous for the extent in which secondary education is free. In all there were approximately 9,500 pupils enjoying free secondary education in the Dominion, and in 31 schools giving free tuition 93 per cent. of the enrolment paid no fees. An interesting chart—did our space allow we would reproduce it—shows how free education can be got from the lowest to the highest stage. It is a "ladder" of unusual width. As elsewhere in Britain—for lack of sanctions—boys and girls leave school at too early an age. The average salaries in secondary schools in 1915 were for prin-

cipals: Men £585, women £436; for assistants: Men £266, women £187. As to the instruction, we observe with interest that an increasing number of schools were using a modification of the direct method for the teaching of Latin. In practically all the endowed schools individual laboratory practice is a conspicuous feature of the science teaching.

CHRISTMAS BOOKS.

Tales of the Great War. By HENRY NEWBOLT. (6s. net. Longmans.)—The stories are told, as far as possible, in the words of the actors themselves, and the manuscript has been read by two great Admirals and one great General, who have made corrections and additions. We quote from the introductory *Letter to a Boy*, who is assured that he may take this book to be as accurate as anything yet written. With Sir Henry Newbolt for author, there is nothing to add save that the tales include the destruction of Ypres, the battles of Coronel and the Falklands, of the Marne and Aisne, the war in the air and the battle of Jutland. The tales are told without embroidery, as the author of *Admirals* All alone can.

The Ages of Man. An Anthology relating to Every Year of a Man's Life. By CHARLES SAYLE. (7s. 6d. net. John Murray.)—Dutiful nephews and grandchildren are often at their wits' end to find an acceptable present for their venerable uncle or grandsire, and here is a *livre de luxe* that, if the relative, like most gentlemen of an older generation, retains some tincture of antiquarian lore or of the Latin and Greek he learnt at school, will exactly meet the case. The author has winnowed a mass of material compiled during many years, and he gives us quotations varying from a single line to several pages for every year of a man's life from one to a hundred and twenty-eight. After that we pass by leaps and bounds to the semi-mythical and mythical, without any marked distinction. Thus, for 127 we have, Sarah died; for 140, Galen; for 152, Thomas Parr; for 169, Henry Jenkins. Metchnikoff is his chief authority, but there is no attempt at criticism. There are a number of Greek epigrams from the anthology, but of these only one is translated. Of special interest is page xiii, *A Speculum Etatis Hominum*, leonine verses from a MS. in the Cambridge University Library. A couplet may serve as a specimen. Juvenis is asked, "En sublimatus in quo sis quaero beatus?" and answers, "Naturae decore neve nisi gaudeo flore." (The second line is a puzzle.) The author somewhat rashly invites his many friends to furnish happy quotations. He will have such an *embarras du choix* that we will not accede to his request: but we may venture one slight correction. The M. J. P. Flourens, quoted on the introductory page for *The Ages of Man*, must be the French academician P. J. M. Flourens, famous for his paradox that man began a second youth at sixty.

Jim and Wally. By MARY GRANT BRUCE. (2s. 6d. Ward, Lock.)—The War forms the frame for this harmless and pleasantly written story of Irish life. Jim and Wally are two Australian lads who are taken to Ireland to recover from "gassing" in the battle of the Marne. They are escorted thither by Mr. Linton, the prosperous owner of Bullabong, with which Miss Bruce's readers are already familiar, and his daughter Norah, an admirable type of the colonial girl. In mid-channel they are chased by a submarine, which they evade by constant tacking, and receive the blessings of a venerable priest returning after two-score years of missionary work, who sings his *Nunc dimittis* in sight of his native land. The pictures of Irish life make pleasant reading, but are somewhat conventional, and we suspect that Miss Bruce has never herself thrown a fly. The epilogue brings us back to war, and the raid on a secret cave which serves the Boches as a store for petrol, crowns all the characters, Norah included, with undying fame. Sir John O'Neill, a hunchback squire of high degree, plays the part of the old priest.

Dreadnoughts of the Dogger. By ROBERT LEIGHTON. (3s. 6d. Ward, Lock.)—Mr. Leighton has delighted many a young reader in past years with his stories of adventure far afield. Now he gives us a sea story of the present War, and the knowledge that such happenings are going on about us while we read adds a fresh element of excitement to his descriptions. Some sea scouts on the one hand, and a German spy and his son on the other, are the central figures in the story, and the opening is not flattering to our self-love. The Germans outwit the English over and over again, and at the beginning of submarine warfare have it mostly their own way. The German boy, who has been brought up in England and imbued with some sturdy British virtues, is soon sickened by the brutality of his country's method of waging war, and finally abjures the Fatherland and all its works. There are numerous illustrations of an effective kind.

The Empire in Arms. An account of the British Army, the British Navy, and the Indian and Colonial Forces: their Work, Weapons, and Organization for War. Edited by HERBERT STRANG. (Henry Frowde and Hodder & Stoughton.)—Histories of the War, full and brief, learned and simple, we have had in scores, but this is a new and successful attempt to present in a popular form the military and naval changes in arms, strategy, and tactics that the War has so far brought about. These are not only illustrated by drawings and photographs, but illuminated by apposite narratives and anecdotes drawn from letters published and unpublished. Thus, the origin of the submarine is traced to the American Civil War, though its history does not extend to the recent crossing of the Atlantic. The two glossaries of army and navy terms are a useful addition, but they might be indefinitely extended. Thus, we miss "barrage" and "curtain fire," and "tanks" doubtless will appear in a new edition.

My Book of Beautiful Legends. By CHRISTINE CHAUNDLER and ERIC WOOD. With twelve Illustrations in colour by A. C. MICHAEL. (6s. Cassell.)—Half a century of legends—Greek, Norse, and medieval—are here retold for young children: some, as *The Labours of Hercules*, occupying some fifty pages, and others but a page or two. The least successful are the Greek. The best of these have been told by Kingsley in a way to satisfy both scholars and the young, and they have been freely modernized by Hawthorne and many others. Even children should distinguish the gods of Greece and Rome, and we revolt when Hercules, "a man of honour," puts a cushion on his shoulder to relieve himself of the burden of the heavens, and calls out to Atlas as he swings out across the mountains to fetch the golden apples, "Hurry up!" Again, we think that the legend of *The Coming of Arthur* had better be read as it is told in *Idylls of the King*, and that of *The Pied Piper* as it is told by Browning. We should be loath to affirm that all these legends were believed by the peoples among whom they originated or grew. The most attractive feature is the illustrations.

Stories of Great Sieges. By EDWARD GILLIAT. (2s. 6d. Seeley.)—We welcome this cheap reprint of Mr. Gilliat's excellent volume, *The Romance of Modern Sieges*.

Stories of Russian Folk-Life. By DONALD A. MACKENZIE. (2s. 6d. net. Blackie.)

These seven tales of Russian folk-life carry us from the days of Peter the Great down to the present War. We start with the heroic resistance in the Duklar Pass, and next a convalescent soldier tells, in the balcony of a hospital overlooking the city, the fairy tale of the Lady of Moscow and her wooing—a variant of *The Sleeping Beauty*. There is little distinctively Russian. The best of the tales is on the old theme of an escape from the wolves, in which the devoted follower of Gordon, the famous Scotch general of Peter the Great, loses his life in rescuing Gordon's young daughter. There is little attempt to suggest the darker side of the mujik's life, and it is a bold venture to give a résumé of Russian history and ethnography in some thirty pages. There are excellent illustrations.

With Joffre at Verdun. By Captain F. S. BRERETON. (3s. 6d. Blackie.)—We first made the acquaintance of Henri and Jules, the heroes of this story, in Berlin, on the outbreak of war. They are promptly consigned to Ruhleben, where they have a sufficiently bad time without undergoing its worst horrors. They escape, join the French Army, and are at once sent to Verdun. They take their full share in the defence and do credit to their mixed French and English education. Both in the escape, and still more after they have joined, there are many exciting scenes described with Captain Brereton's usual skill. The two maps showing the French lines are welcome reminders of the positions of various villages whose names are now familiar. There are some good illustrations by Arch. Webb.

A Naval Venture. By T. T. JEANS. (6s. Blackie.)—This "War Story of an Armoured Cruiser" gives a lifelike picture of some of the naval experiences in the Eastern theatre of war. Tragedy and comedy, not to say farce, are wonderfully mingled; it is perhaps as well that the landing on Gallipoli and the evacuation of Suvla Bay, to say nothing of countless minor incidents fraught with difficulty and danger, should appear with a background of endless laughter and practical jokes on the part of the "Snotties" of H.M.S. "Achates," though it is somewhat bewildering to an outsider. Without such relaxation, which is in abeyance only in the most critical moments, such work and such deeds would be impossible even to a British Sailor. Fleet-Surgeon Jeans may be congratulated on an excellent piece of work. It is well illustrated in monochrome by Frank Gillett, and has a clear sketch map of Gallipoli and the Dardanelles.

Burton of the Flying Corps. By HERBERT STRANG. (3s. 6d. net. Hodder & Stoughton.)—This is not one connected story but several

incidents of a thrilling nature in the career of Burton of the Flying Corps. They start in England and continue in France, the Aegean, Macedonia, and end in France again. Burton is a person of ideas, and under the pressure of danger is quick to evolve some plan of escape. This convenient faculty is not allowed to rust for want of use, and his exploits make up an exciting volume. Burton is a modest person and we fear he would be annoyed at being introduced—to anyone—as "Burton V.C., D.S.O.," but this is a detail. There are some effective illustrations in colour and black and white by C. E. Brock.

Through the Enemy's Lines. By HERBERT STRANG. (2s. 6d. net. Hodder & Stoughton.)—Roger Burnet's adventures make a capital story. He has some valuable assets to start with. His father lived for many years in Mesopotamia, and made firm friends with some of the Arabs. As he kept Roger with him for a long while, the boy learns to speak the Arab and other native languages, and thus, when in the summer of 1916 he sets his heart on joining the British forces somewhere, he has much to help him in getting through the enemy's lines. Even so the difficulties and dangers are many, and it is only by devising and carrying out most ingenious plans that he succeeds in reaching part of the Mesopotamian army, to which he returns after leading a detachment to the rescue of a mixed Indian and Arab force besieged amongst the hills. There are some spirited illustrations.

The Russian Story Book. Retold by RICHARD WILSON. Illustrated by F. C. PAPE. (7s. 6d. net. Macmillan.)—Mr. Richard Wilson has travelled much in the realms of gold, but the ideal interpreter of Russian Sagas has not swum into his ken, and he hopes some day to see these sagas told for English readers by some Russian Chapman and illustrated by a Russian artist. Meanwhile he has selected and told, in his own language, the cycle of legends connected with Kiev and Novgorod, and the exploits of Ilya, the Russian Heracles, Samson, and Lancelot woven into one, and of other native heroes. These stories are told for youths and maidens in their early teens, and profusely illustrated by Mr. Papé. Much has been already done in this direction by English scholars, not mentioned by Mr. Wilson in his introduction, and we may hope before another Christmas to see his wish fulfilled; meanwhile our boys and girls will gratefully accept his foretaste as a prelude.

(1) *A Girl Munition Worker* (3s. 6d.); (2) *The Unknown Island* (3s.); (3) *A Canadian Farm Mystery* (5s.). By BESSIE MARCHANT. (Blackie.)—The three girls who are the heroines of these stories are placed in very different surroundings, but are all of the type so often sketched for us by this popular writer. Frank, fearless, and competent, with an honest desire to do their best whatever it may be they have to tackle. If we add that they are invariably seized with misgivings as to the wisdom of what they do at the most critical moment, and that this is a little provoking to the reader, it does not make them less true to life, and, after all, if they fail for the moment through indecision, they save the situation in the end. *The Girl Munition Worker* will specially appeal to many at this moment; she is an attractive person and loses our sympathy only when she discusses Dick Ferris with such perverse and unreasonable contempt. In *The Unknown Island* Winnie and the boys divide the honours, and their adventures are interesting; they show great pluck and resource in their perilous situation. Pam, the heroine of *The Canadian Farm Mystery*, shows almost superhuman versatility. That a young London bred girl, doing governess work at home, should so instantly fall into the ways of a Canadian farmer is at least improbable, even with all the help given by her neighbours. The story would bear some curtailment, but is well written. All the books are illustrated, the last has some effective pictures by Cyrus Cuneo.

All about Inventions and Discoveries. By FRANK A. TALBOT. (6s. Cassell.)—This is an eminently practical book. The climax is reached in the foundation of the Singer Sewing Machine Company, which in 1896, so we are told, reached a total of nearly a million machines per annum. We read little of the true discoverers, the Master Builders who laid the foundations which enabled lesser men to turn them to account and to reap by their practical inventions colossal fortunes, but much of the Westinghouse brake, the typewriter, and the cinematograph. Much of this will be new and interesting to young readers.

The Little Wee Cupid. By NANCY HAYES. (1s. net. Cassell.)—This small picture story book has been plentifully and daintily illustrated by Miss Florence Mary Anderson, both with coloured plates and any number of black and white drawings of fairies and the like. Children will enjoy the recital of Cupid's adventures in his search for the magic star dust he has failed to guard, and probably not object to his persistent repetition of the epithet "little wee" which somewhat palls on the older reader.

Chuckles. Pictures by A. E. KENNEDY. Verses by JESSIE POPE. (2s. 6d. Blackie.)—A little book of black-and-white and brightly coloured pictures of animals under all sorts of conditions. Most of the pictures have attractive little verses in explanation. We wonder why, in a central section of the book, the eyes of children and animals suddenly become of the golliwog type; otherwise the drawings are good and full of life.

Favourite Nursery Rhymes. Illustrated by FRANK ADAMS. (1s. Blackie.)—This contains the usual favourites and some of the less familiar, though no less pleasing, nursery rhymes. The drawings are clever and humorous, and the colouring specially good. Sometimes Mr. Adams verges on caricature at the expense of charm.

(1) *All Round the Farm* (1s.); (2) *Romps* (6d.) (Blackie.)—Gay picture-books of farm animals, very strongly sewn and suitable in every way for nursery wear.

For Little Chicks. (6d. Blackie.)—Very simple little stories and verses, plentifully illustrated for small children. We note one or two curious Nature study facts, such as that about the digestive methods of the star-fish, which seem a little out of place.

Pilot, and other Stories. By HARRY PLUNKET GREENE. Illustrated by H. J. FORD. (6s. net. Macmillan.)—We knew Mr. Plunket Greene could write as well as sing, but we hardly expected to see a child's story book bearing his name. Indeed we doubted whether, like Homer, this were not the work of someone else of the same name, but when we came on the magic words "the Fairy Lough," made more magic by Mr. Plunket Greene's special art, our doubts were dispelled. This is a delightful book, the first, we hope, of many more to come. Pilot, the Labrador retriever, the arch-deceiver, is irresistible. Olivia is true to the portrait of her asleep among the bluebells. Pat must be a relation of Pilot. David takes us to the real fairyland of Lough-na-Sheeha. *Iron Blue* brings us to a humorous earth again, and *The Birthday* points a wholesome moral. Nothing could suit Mr. Plunket Greene's stories better than Mr. Ford's imaginative illustrations.

The Luckiest Girl in the School. By ANGELA BRAZIL. (3s. 6d. Blackie.)—Miss Brazil is by now well known as a clever writer of girls' books. This is another brightly written story of schoolgirl days. Winona is a capable warm-hearted girl, who makes her way by practical rather than intellectual ability.

John of Daunt. By ETHEL TURNER. (2s. 6d. Ward, Lock.)—This is a story of ordinary family life out in Australia, affected to a certain extent by the War. It has plenty of go and vigour.

Tinkler Johnny. By AGNES GROZIER HERBERTSON. Illustrated by FLORENCE HARRISON. (2s. net. Blackie.)—A whimsical and attractive story concerning Tinkler Johnny and the strange folk he encountered. Miss Harrison's illustrations add greatly to the charm of the book.

Arabian Nights: Aladdin, Sindbad, Ali Baba. (1s. Blackie.)—A convenient little edition of these three tales, with good illustrations.

The Birthday Book of Balu. By AMY STEEDMAN. Illustrated by HELEN JACOBS. (2s. net. United Council for Missionary Education.)—A charming tale of Balu, a little Indian boy, and his elder sister Seela, and the kind "Missi Amma," who remembers his birthdays, teaches him and tells him of the Babe of Bethlehem. The drawings add greatly to the reality and attraction of this simple story.

Old-Not-Too-Bright and Lilywhite. By HAROLD SIMPSON. Illustrated by G. E. SHEPHEARD. (1s. Ward, Lock.)—An amusing little story in verse for tiny children: the pictures are needlessly grotesque.

More about the Squirrels. By ELEANOR TYRRELL. (3s. Nelson.)—Those who have read *How I Tamed the Wild Squirrels* need no persuading before they seize eagerly upon this sequel. It comes in response to inquiries and requests from many people and many lands, and we need only add that it has just the same charm as its forerunner, and the drawings by Miss Appleton are as sensitive and delicate and wholly delightful as before.

Thrilling Deeds of Valour. Stories of Heroism in the Great War. With Pictures in colour and black-and-white by CYRUS CUNEO and GORDON BROWNE. (1s. 6d. Blackie.)—Stories of heroism on all the fronts, related in a simple and telling manner, and quite admirably illustrated in colour by Mr. Cyrus Cuneo.

Blackie's Children's Annual. (3s. 6d. net. Blackie.)—The annual begins this year with a story by Mr. Algernon Blackwood, long recognized as a most sympathetic Olympian. Lively stories and verses follow by well-known authors. The colouring of the pictures is curiously varied; nothing could be more pleasing than Miss Anderson's "Child Nothing," a contrast to the crude colouring of some of Mr. Brock's pictures.

The Jolly Book for Boys and Girls. Edited by EDWARD SHIRLEY. (2s. 6d. net. Nelson.)—This is a thoroughly up-to-date *Jolly Book* for this year. It has heroic tales of the War, a serial story of children's adventures called *The Finders-out*, besides some old tales retold, and some favourite and familiar verses.

London Revisited. By E. V. LUCAS. (6s. net. Methuen.)—This is a new and revised edition of Mr. Lucas's popular *A Wanderer in London*. It must not be mistaken for a guide; it is the familiar and personal gossip of a literary man. Full justice, as we might expect, is done to Charles Lamb, and we have delightful pages from *Pepys' Diary*, but of the transformed London of to-day, the Government buildings in Whitehall, and the Clubs in Pall Mall, we hear little or nothing. There are sixteen illustrations in colour by Mr. H. N. Livens, the well known artist, in addition to many photographs.

The Boy's Book of Pioneers. By ERIC WOOD. (3s. 6d. Cassell.)—We welcome yet another Christmas book by Mr. Eric Wood, who has made himself a reputation as a popularizer for boys of doughty deeds and tales of romance, new and old. The twenty-one heroes and heroines here dealt with will in most cases be familiar even to the modern schoolboy, but (we confess to our shame) we had never heard of Annie R. Taylor, "the first Protestant missionary to make a resolute attempt to reach Lhasa." Even now we are not certain of her date. All we are here told is that "many years before her fellow-countryman Thomas Manning [Charles Lamb's correspondent] had journeyed into Lhasa." Mr. Wood is at his best when condensing such a narrative as that of Rajah Brooke. When he treats of the pioneers in science and invention, he is, let us say, not so successful. Of airships the human boy is likely to know as much or more than the author. Roger Bacon was not the first man to tackle the problem of flight, and we cannot tell why de Rozier and d'Arlandes are pronounced the first airmen after the Brothers Montgolfier had "when the people enthused sent up another balloon which was entirely successful." The schoolboy is likely to rank as equals Leonardo da Vinci, Santos-Dumont, Sir Hiram Maxim, and Count Zeppelin.

Herbert Strang's Annual. (4s. 6d. net. Henry Frowde and Hodder & Stoughton.)—The new volume contains some excellent stories. Naturally the War, and subjects connected with it, take up a fair share, but there is plenty of variety. Two amusing school stories lighten the tragic elements. Several articles dealing with war material in different shapes, such as the first use of bombs or grenades, the use of fire in warfare, the way in which the mine-sweepers work, the construction of a trench railway, salvage, and the history and use of Zeppelins, are of special interest. Many of the illustrations are extremely good. Cyrus Cuneo is most dramatic, and the frontispiece and "Salving the Cargo" are striking. The numerous black-and-white pictures are distinctly good, and the mule in "How the Army gets its Horses" deserves commendation. A very welcome book for any boy.

Cassell's Children's Annual. (3s. 6d. net. Cassell.)—A book to delight children; full of amusing stories and brightly coloured pictures, with verses in between. Some of the stories are very prettily told, "The Hide and Seek King" for one. There are fairy tales and other tales, something to suit every one's taste, and funny black-and-white pictures to make children laugh. It is a fine big book of two hundred pages, with large clear print for little readers.

The Blue Book of the War. Edited by HERBERT STRANG. (2s. 6d. net. Henry Frowde and Hodder & Stoughton.)—The Blue book begins with a slight sketch of progress compared with a year ago, and extracts from a letter or two which show the kind of spirit in which our men go into action. Then follow descriptions of some of the most noted actions of the War, such as Loos, the Dardanelles, the battle of Jutland, the French offensive in the spring of 1915, Verdun, Colonial wars, and the battles of our Allies; in fact, a wide range covering heroic deeds in all parts of the world. This will be inspiring reading for young and old alike. There are excellent photographs of guns, submarines, &c., and some spirited coloured pictures.

Ian Hardy Fighting the Moors. By Commander CURREY, R.N. (5s. Seeley.)—Last year we left Ian Hardy a senior midshipman, and we are promised next year the fifth and final volume of the Hardy saga. It is a rollicking yarn after the manner of Marryat. Ian is still a mid. on board H.M. frigate "Flora," but from his distinguished conduct against the Moors in Morocco, and in running down a slave dhow, we expect to take leave of him a Commander, like his gallant biographer. There is nothing that enables us to fix the date of this novel except that it is in the age of sailing ships, and therefore more than half a century ago; and the conscientious cadet will search in vain for the famous City of Mahayan. All the better, most will say, for a genuine Christmas book which will not be set as a holiday task.

(Continued on page 704.)

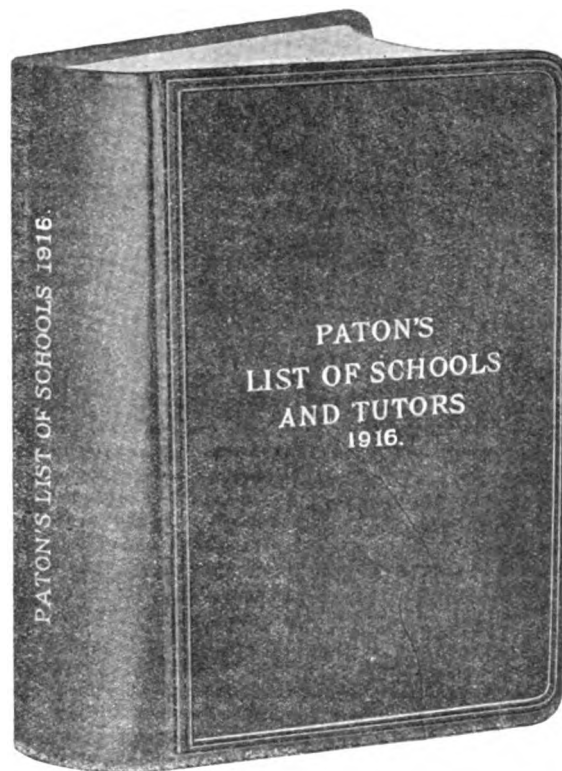

PATON'S LIST of SCHOOLS and TUTORS

An Aid to Parents in the Selection of Schools.

THIS BOOK secures a far larger proportion of *definite results* than any other publication of its kind.

"We have quite a contingent from that town [Yorkshire] all through one girl whose parents read of the school in *PATON'S LIST*."

"I have recommended my Governors to continue our Advertisement in your book, because it appears to be a useful medium for bringing this school before a large number of people, whom it would be impossible to reach personally."

"Thank you very much for sending me your 1916 *LIST OF SCHOOLS*. My Advertisement looks well, and has already brought me a pupil."

"I am pleased to say that your book has been the means of introducing into the school some very useful boys."

"I am quite satisfied with the results that have followed my making use of your publication."

**HEAD MASTERS or HEAD MISTRESSES wishing to
have their Schools included in the *Twentieth Edition*
should apply to**

J. & J. PATON, Educational Agents,
143 CANNON STREET, LONDON, E.C. Telephone: Central 5053.

[See also Advertisements on Front and Back Pages of Supplement.]

On the Road to Bagdad. By CAPTAIN F. S. BRERETON. (6s. Blackie.)—Before they reach the Bagdad Road Geoffrey Keith and his friend have had adventures galore, and have distinguished themselves in all. The episode in the patrol boat is most exciting. Geoffrey has the advantage of speaking Turkish and Arabic, and finds his capacity for understanding what people say an invaluable assistance. He and Philip are two plucky and extremely light-hearted boys, so full of fun and mischief that it is a wonder most of their schemes do not miscarry, but fortune favours them, allowing them to escape from prison and the numerous snares set for them by a particularly objectionable German agent who sticks at nothing. Interwoven with the story is an interesting sketch of the British Expeditionary Force in Mesopotamia and what it had to undergo. The time covered is from just before the outbreak of war till the surrender at Kut, when our heroes join the force that tried to relieve General Townshend. The book is well illustrated by Wal. Paget.

With Kitchener in the Soudan. By G. A. HENTY. (3s. 6d. Blackie.)—This is an appropriate time for a new edition of Henty's popular story which recalls some of Kitchener's earlier work. There are good pictures by W. Rainey.

English Nursery Rhymes. Selected and edited by EDNA WALTER. Harmonized by LUCY BROADWOOD. Illustrated by DOROTHY WHEELER. (5s. net. Black.)—This dainty volume will surely melt the heart of war-economizing parents. All the old favourites are here, though not all quite in their most familiar form. The simple accompaniments wisely include the tune, and the delicate and original pictures add a fresh charm to these old friends.

The Chummy Book. (2s. 6d. net. Nelson.)—A book of simple stories and verses for small folk who can just read, and who want varied interest and plenty of pictures to help them along. The print is large and clear, and the pictures particularly inviting.

Some British Painters. By JAMES BAIKIE. (2s. 6d. net. Black.) The painters included in this book are Reynolds, Gainsborough, Romney, and Raeburn. Two examples in colour are given from the works of each of the four artists, and we congratulate Messrs. Black on the beautiful reproductions. The letterpress gives the life of each painter, told in a simple interesting way for children. We should have liked perhaps a little more about their paintings rather than about their personal life.

The Maid Marvellous, Jeanne Darc. By MAGDALENE HORSFALL. (3s. 6d. Duckworth.)—No heroine of medieval times has inspired so much poetry and prose since Villon wrote of "that good Joan whom Englishmen at Rouen doomed and burnt her there," and it is a bold venture to weave yet another garland for Christmas time. Miss Horsfall accepts, without comment, the mythical element, and adopts the archaic style of the chronicles. The book will appeal to elder girls—we have "a liking old" for Mark Twain.

Rounding up the Raider. By PERCY F. WESTERMAN. (3s. Blackie.)—A capital story of the exciting experiences of three sub-lieutenants who are homeward bound on a Japanese liner, which is torpedoed and sunk by a German raider disguised as a Dutch vessel. They are taken to German East Africa in company with some German reservists picked up on the high seas with supplies of food and munitions. Their one idea, naturally, is escape; and gallant are the efforts they make to that end. There are no dull pages, but a perpetual feast of fresh interest. The book has some good illustrations by Archibald Webb and an effective coloured frontispiece.

Frank Forester. By HERBERT STRANG. (3s. 6d. net. Henry Frowde and Hodder & Stoughton.)—Every one will welcome this reprint of a most thrilling story of the Dardanelles, illustrated by Cyrus Cuneo. "At the Point of Despair" is very striking.

The Old Man of the Mountain. By HERBERT STRANG. (3s. 6d. net. Henry Frowde and Hodder & Stoughton.)—In the rush of War stories, interesting and exciting as they are, it is almost a relief to turn to a book which has nothing to do with the present struggle, but only with a very weird theme of its own. There is an uncanny attraction about the Eye which makes us unwilling to put the volume down till the mystery is solved. The veiled threats and half-suggested horrors which haunt the imprisonment of Forrester and his companions play an effective part.

The Fortune Face. By W. B. COOKE. (3s. 6d. net. Nelson.)—It is impossible for any story of buccaneers and hidden treasure lying in far-off seas, to avoid comparison with *Treasure Island* with most of the advantage on the side of that immortal work. *The Fortune Face* has points of resemblance in the personnel of the story and its general outline. But it makes quite interesting reading and begins very well. The patriarchal person and "Ten Strings" fall rather flat; but the book ends satisfactorily with the destruction of all the evildoers as in an old-fashioned tragedy. There are four well drawn coloured pictures.

BOOKS OF THE MONTH.

A. R. HOPE'S BOOKS FOR PRIZES

HALF AND HALF TRAGEDY.

SOENES IN BLACK AND WHITE. Price 5s.

"Mr. Hope apologizes for his title, or rather explains it and the difficulty he had in choosing it, to make clear that these are the tragedies of 'half-sized actors,' those tragedies that to the youthful mind are so overwhelming, but when looked back upon in more mature years seem almost trivial. Still, one or two of them are tragic enough to be considered so at any age, the first one at least, 'Sent to Coventry.' . . . There is something more than half a tragedy, too, in the longest of the chronicles, 'An Old Friend.'"—*Daily Chronicle*.

HERE AND THERE: An Album of Adventures. New Edition. Illustrated in Colour. 5s.

DRAMAS IN DUODECIMO: Abstracts and Brief Chronicles of Youth. 5s.

HERO AND HEROINE: the Story of a First Year at School. With Illustrations. New Edition. 3s. 6d.

NOW AND THEN: Chronicles of Half Text History. With Illustrations. 3s. 6d.

SPECIAL ENTRY OF NAVAL CADETS.

The Secretary of the Admiralty announces that about fifty cadetships (special entry) will be offered for competition at the Examination to be held by the Civil Service Commissioners, conjointly with the Army Entrance Examination for Woolwich and Sandhurst, in February next. Candidates are required to be not more than 18½ nor less than 17½ on December 1st, 1916.

Candidates who competed unsuccessfully at the Examination in June, 1916, and are still eligible as regards age, will be allowed a further opportunity to compete. Similarly, candidates who fail on the present occasion will be allowed to compete again in June, 1917, provided they are still eligible as regards age.

Candidates who have served with His Majesty's naval and military forces during the war will be allowed a deduction from actual age in respect of such service. To receive this concession candidates must furnish an official certificate as to the period of their service.

The Syllabus of Subjects of Examination and further particulars may be obtained from Mr. JAMES GIEVE, 65 South Molton Street, London, W.

DRUMMOND LATHES

Are right at the Front.
The important part played by Lathes in the present war cannot be exaggerated. A knowledge of Lathe Work means that at all times you are "Right There" and your services indispensable. DRUMMOND LATHES stand for the "HALL MARK" of Accuracy, and in the education of all a good knowledge of Lathes and their uses is invaluable. The 3½ in. Lathe illustrated below is low in price, but capable of the highest class work.

As supplied to the British Admiralty.
Catalogues on application to **DRUMMOND BROS., Ltd.,** VIEW HILL, GUILDFORD.

Special Christmas Prize Competition.

A Prize of One Guinea is offered by the Editor of
The University Correspondent,

Burlington House, Cambridge, for the best original collection of twelve "Howlers" or Schoolboy Blunders. Every collection of twelve "Howlers" must be in a separate envelope, and must bear the words "Howlers Prize Competition" on the outside of the envelope.

Entries must reach the Prize Editor, Burlington House, Cambridge, not later than December 18th.

Copies of "THE JOURNAL OF EDUCATION" for Denmark, Greece, Holland, Norway, Portugal, Spain, Sweden, Switzerland, South American States, and the United States can be accepted by the Postal Authorities only from recognized Publishers who have obtained special permission from the War Office, and comply with certain formalities. Papers posted by unauthorized persons are stopped.

Mr. WILLIAM RICE, Junr., Publisher of "THE JOURNAL OF EDUCATION," has obtained the necessary Permit, and he will be pleased to forward copies to persons living in the above-mentioned Countries at the rate of Eightpence each, post free.

DUSTLESS and HYGIENIC SCHOOLS

On all School, Laboratory, Library, &c., Floors and Linoleums of every description

USE**FLORIGENE**

(Regd.)

VERY EARLY in the **CHRISTMAS VACATION** for Best Results.**(BRITISH MADE.)**

It is **IMPORTANT** to **NOTE** that **ONE APPLICATION** of "Florigene" **ALLAYS** the **DUST** and **DIRT** for **2 TO 12 MONTHS**, according to traffic, not only during each Sweeping (without sprinkling of any kind) but also throughout all the intervening periods—which is of greater hygienic importance. "Florigene" is also easily and quickly applied, and saves time and labour.

These sanitary, labour-saving, and economic advantages are **NOT** attained by sweeping-powders or any mechanical or other method.

NEW ADDRESS:—

OXFORD AND CAMBRIDGE LOCAL EXAMINATIONS, SUITABLE CLASS-BOOKS FOR JUNIOR AND SENIOR STUDENTS.

Mathematics and Science.

Algebra, Junior. By A. G. CRACKNELL, M.A., B.Sc., and AUGUSTUS BARRACLOUGH, M.A. 2s. 6d. With Answers, 3s.

"Maintains the high standard of excellence we are accustomed to expect from so well known a source. The treatment of the graphic portion is particularly good."—*Journal of the Assistant Masters' Association.*

Algebra, Junior, Test Questions in. By FABIAN ROSENBERG, M.A., B.Sc. 1s. With Answers, 1s. 3d.

Algebra, The School. By A. G. CRACKNELL, M.A., B.Sc., F.C.P. With or without Answers, 5s.
Also in Two Parts. Part I, 2s. 6d. Part II, 2s. 6d.

"The book is compiled in accordance with the latest views on the teaching of Algebra, and we have rarely come across a clearer or more satisfactory exposition of subject-matter."—*The Journal of Education.*

Arithmetic, The Junior. Being an adaptation of *The Tutorial Arithmetic* suitable for Junior Classes. By R. H. CHOPPE, B.A. With or without Answers, 2s. 6d.

"Just as good a handbook on Arithmetic as the student can desire."—*Nature.*

Arithmetic, The School (Senior Local Edition). By W. P. WORKMAN, M.A., B.Sc., Head Master of Kingswood School, Bath. 3s.
Adapted from *The School Arithmetic* for the Oxford and Cambridge Senior Local Examinations.

"The best Arithmetic for Schools on the market."—*Mathematical Gazette.*

Botany, Junior. By Prof. FRANCIS CAVERS, D.Sc. 2s. 6d.

"Dr. Cavers has achieved a useful little book."—*Journal of Botany.*

"A very excellent volume. Practical to a high degree. The diagrams are very good."—*Schoolmaster.*

Botany, The Senior. By FRANCIS CAVERS, D.Sc. 4s. 6d.
"There is abundance of experiments, with useful practical hints and directions; the volume is evidently the work of an accomplished teacher."—*Educational Times.*

Chemistry, Junior. By R. H. ADIE, M.A., B.Sc. Second Edition. 2s. 6d.

"The results of fifteen years' experience of a thoughtful teacher are always valuable, and, as one might have anticipated, the book offers a thoroughly sound course of practical instruction."—*Nature.*

Chemistry, Senior. By G. H. BAILEY, D.Sc., Ph.D., and H. W. BAUSOR, M.A. 4s. 6d.

"We can commend the book to any student requiring a sound and clearly written textbook."—*The Journal of Education.*

Geometry, Junior. By A. G. CRACKNELL, M.A., B.Sc. 2s. 6d.

"A simple treatment of the elements of geometry. A feature of the book is the number of questions which require a numerical answer, incorrect and careless work being thereby easily checked."—*Schoolmaster.*

Geometry, The School. By W. P. WORKMAN, M.A., B.Sc., and A. G. CRACKNELL, M.A., B.Sc. 3s. 6d.

A simplified edition of the authors' well known *Geometry, Theoretical and Practical*, Parts I and II, specially adapted for ordinary school use.

"The reputation of this series, the authors, and the press from which this book is issued, are a sufficient guarantee of its value. Excellent in every respect."—*Schoolmaster.*

Heat, Junior. By JOHN SATTERLY, D.Sc., M.A. 2s. 6d.
"A good practical course. The diagrams are very clear, and the subject-matter all that could be desired."—*Schoolmaster.*

Magnetism and Electricity, Junior. By R. H. JUDE, D.Sc., M.A., and JOHN SATTERLY, D.Sc., M.A. 2s. 6d.

"This little book makes a special point of fundamental principles, and is especially adapted to the needs of pupils making a start in the subject."—*Educational Times.*

Science, Junior Experimental. By W. M. HOOTON, M.A., M.Sc., F.I.C., Second Edition. 2s. 6d.

"An excellent and workable two years' course in Experimental Physics and Chemistry."—*Educational News.*

Languages, History, and Geography.

English Composition, Junior. By E. W. EDMUNDS, M.A., B.Sc., Senior Assistant Master at Luton Modern School. 1s. 6d.

"This excellent manual makes plain for the young pupil the essentials of good writing. A distinctly workmanlike production that can be heartily recommended as one of the best of its kind."—*Education.*

English Composition, Senior Course of. By E. W. EDMUNDS, M.A., B.Sc. 2s. 6d.

"Excellent devised and arranged."—*School World.*

"Teachers of English will find this a very useful book for practical classroom purposes."—*Schoolmaster.*

English Grammar, Junior. With Parsing and Analysis. By A. M. WALMSLEY, M.A. Second Edition, Revised. 1s. 6d.

"The work of a practical teacher who knows the value of compromise between the old and the new methods."—*Journal of the Assistant Masters' Association.*

English Verse, An Anthology of. For use in Schools and Colleges. By A. J. WYATT, M.A., and S. E. GOGGIN, M.A. Second Edition, Enlarged. 2s. 6d.

"The selections are admirably fitted for the purpose of presenting the course of English verse through the centuries."—*Literary World.*

English Prose, An Anthology of. For use in Schools and Colleges. By S. E. GOGGIN, M.A., and A. R. WEEKES, M.A. 2s. 6d.

"This anthology of English prose is compiled with abundant good sense. Within its limits the choice of writers could not well be bettered . . . a very useful book."—*Saturday Review.*

French Course, New Junior. By G. A. ROBERTS, M.A., Head Master, Russell Hill School, Purley. 2s. 6d.

"The short extracts are well chosen. With a capable teacher we have no doubt that this would prove a useful textbook."—*The Journal of Education.*

French Reader, New Junior. By J. P. R. MARICHAL, L. ès L., and L. J. GARDINER, M.A. 2s.

"Consists of well-chosen literary extracts in French."—*Education.*

French Course, Senior. By Professor ERNEST WEEKLEY, M.A., and C. GILLI, B.A. 3s. 6d.

This Course is designed for candidates preparing for the Senior Local Examinations. The text is substantially that of Professor Weekley's *Matriculation French Course*, but the exercises and passages for translation into French are different.

"A really excellent textbook."—*Teachers' Times.*

Geography, Junior, 1917-18. Including Outlines of Physical Geography, the British Isles, and Europe. By G. C. FRY, M.Sc. 2s.

"A useful and well arranged elementary work."—*Guardian.*

Geography, Senior, 1917-18. Including Principles of Physical Geography, the British Isles, and Europe. From the *Text-book of Geography* by G. C. FRY, M.Sc. 2s. 6d.

"Mr. Fry brings out the fascination of the broad view of geography."—*Literary World.*

History of England, School. By M. E. CARTER, Honour School of Modern History, Oxford. 3s. 6d.

Also in three parts as follows:—I, to 1603; II, 1485-1714; III, 1660-1910. 1s. 6d. each.

"The essential outlines of the subject are presented in the most easily digestible form."—*Guardian.*

Latin Course, New Junior. By J. V. THOMPSON, M.A., and LL. M. PENN, M.A. 3s. 6d.

"Admirably unites the more modern methods of teaching with those which have long stood the test of time."—*Educational News.*

Latin Course, Senior. By A. J. F. COLLINS, M.A., and ALFRED ROBINSON, B.A. 3s. 6d.

"Carefully planned and most capably worked out."—*Educational Times.*
"The book is businesslike and well arranged. The examples for translation into Latin Prose are specially well chosen, and serviceable vocabularies are provided."—*Guardian.*

[Advertisers are reminded that "Letters addressed to INITIALS or to FICTITIOUS NAMES, or to a CHRISTIAN NAME without a SURNAME," at Post Offices are not taken in, but are sent at once to the Returned Letter Office.]

All Letters respecting Advertisements and Subscriptions should be addressed—"THE PUBLISHER, THE JOURNAL OF EDUCATION OFFICE, 3 BROADWAY, LUDGATE HILL, E.C." Money and Postal Orders, on the Post Office, Ludgate Circus, E.C., should be made payable to WILLIAM RICE, JUNIOR; Orders and Cheques may be crossed, "The London City and Midland Bank, Ludgate Branch." Postage stamps can only be received at the rate of thirteen to the shilling.

Notice must be given of all remittances through the Post Office from abroad, stating full name and address of the sender; and all Foreign Money Orders must be crossed for payment through a Bank.

Date of publication of next issue will be found at top left-hand corner of front page.

LONDON:

WILLIAM RICE, JUNIOR, 3 BROADWAY, LUDGATE HILL, E.C.

A PROGRAM OF EDUCATION REFORM.

THE Education Reform Council was established in April as the result of a conference convened by the Teachers' Guild. Sir Henry Miers, Vice-Chancellor of Manchester University and formerly Principal of London University, is its President, Prof. Gilbert Murray and Dr. Michael Sadler are Vice-Presidents, Dr. William Garnett is Chairman, and Mr. G. F. Daniell is Honorary Secretary. The personnel of the Council, which numbers well over a hundred, is widely representative and includes many well known names. Detailed consideration of the various departments of education, such as administration, elementary and secondary schools, Universities, character training, research, training of teachers, and the training of women, is entrusted to sub-committees, membership of which is not restricted to members of the Council. Thus there have been many doctors called in to prescribe, and if the "program of education reform," recently published by the Council, represents their considered views, the document should carry weight and influence. Without suggesting that there has been any deliberate "window-dressing," we are disposed to think, however, that the Council is too large for effective discussion and that a wiser policy would have restricted membership to a limited number of representative educationists, prepared to "do their bit" in a great national cause by giving the necessary time and thought to the work. The "program" is admittedly incomplete, the work of the various Committees being still in progress; and the omissions, it must be confessed, impair considerably the value of the scheme of educational reform. Nothing is said, for example, on the general question of the examination of schools other than for the award of junior scholarships, nor on the influence of the system of Civil Service examinations on the work of secondary schools and Universities. If the war has exposed any defect in our national education, it is the need for increased attention to training and research in

applied science in our Universities. On this subject, also, the "program" is silent. The only other ground for general criticism is to be found in the studied vagueness of some of the paragraphs. Heaven knows that concentration of thought on educational reform is difficult enough at the present time for our politicians and the general public. What they want and would welcome is clear-cut advice and definite recommendations for reforms, urged with a certain demoniacal force. More or less self-evident and platitudinous propositions or expoundings of the obvious, such as "There should be increased provision for the care of children under school age, and steps should be taken to secure parental responsibility" (para. I, 5), or "Reduction in the size of classes in elementary schools is an urgent need" (para. II, 6), or "It is understood that the necessary arrangements will be made for religious and moral instruction" (para. V, 1), do not carry us much further on the road to educational reform.

The Council contemplate a drastic revision of the present educational scheme. Formal education should begin, they propose, at the age of five and a-half in "primary" departments or schools, and continue therein till the age of eleven and a-half, the pupils at about this age being selected by careful methods for secondary education or transferred to "middle" departments or schools. Education in these departments would continue to fourteen and a-half, and be followed by part-time "continuation" work for two and a-half years (until the age of seventeen) for an average of three half days per week or an equivalent period per annum. Not much is said as to desirable changes in secondary education except with respect to the development of the higher work and a greatly improved scale of salaries and pensions for teachers. As regards University education, the "program" strongly endorses the view advanced by the Consultative Committee that large additional funds should be provided by the State for scholarships for higher education. The amount suggested by the Consultative Committee—£329,500 per annum—is, in the opinion of the Council, not too large. This further encouragement of University education appears to be one of the most urgent and necessary developments of our educational system. The number of University students in England is far below the requirements, if we are seriously to fulfil our national and imperial obligations towards the advancement of learning and scientific and industrial development. There is much talk of State grants to provide capital for new industries. Why not invest a little more capital in the higher education of our people? Millions of public money are annually expended to ensure that every child shall have a modicum of knowledge. We establish an elaborate machinery of attendance officers to prevent the production of a few picturesque illiterates. But all the time our standards of education from the view-point of international competition are deplorably low. If more money is to be given for scholarships, however, the method of distribution is evidently of vital importance. The Consultative Committee appear to favour competitive examinations. "No practicable method of award for Scholarships for secondary schools can be suggested," they say, "which does not mainly depend upon competitive examination." A new terror for schoolmasters if £329,500 is to be scrambled for annually over and above the existing scholarship scrambles! We are surprised that this view should be expressed by a committee over which Mr. Arthur Acland presides; and we agree with the Education Reform Council that reliance should preferably be placed on school and examination record, probable career of candidates, and general personal fitness. The awards should be made, the Council suggest, by specially constituted Provincial Boards. We shall await with interest the further development of these ideas, which the final Report of the Council will presumably contain.

So much for the general system of elementary, secondary, and University education. A number of other important suggestions are made on special questions. For example, the Council urge strongly the need for encouraging research in education. They recommend the establishment of a central institute for educational research working in close connexion

with the Board of Education and the teaching profession. The formation of local research institutes and educational libraries by the larger Local Authorities should also be encouraged. Great stress is laid on the importance of the physical aspects of education—medical and dental inspection, adequate opportunities for play and physical exercises, and facilities for personal cleanliness. With the question of private schools we enter upon more debatable ground. "Worthy private effort in education should be encouraged." Agreed; but we question the wisdom or expediency of the recommendation that, "with proper safeguards as to efficiency and accessibility, schools under private management should receive State aid." Subject to proper inspection, the recognition of private schools might be carried a great deal further than is at present possible—in the direction, for example, of permitting scholarships awarded by public authorities to be tenable at private schools, and of providing for adequate compensation when the establishment of new public schools injures unfairly the prosperity of neighbouring private schools. But the direct subvention of private schools is a dangerous policy, the adoption of which would undermine the special virtues of private effort in education. The treatment which the London County Council have meted out to certain public secondary schools in London which have accepted a comparatively small local grant should be a sign and portent.

AN AMERICAN ON THE WAR.

MR. ROY W. HOWARD, so the *Times* informs us, is President of the United Press of America. He has returned to New York after a four months' tour in England, France, and Germany, in the course of which he was permitted to visit the opposing belligerents, and he contributes to the *Times* a record of his impressions of London, Paris, and Berlin, and the conclusions he has formed as to the prospects of peace. He starts with a panegyric of Lord Northcliffe as the man of all others who has from the beginning correctly forecast the War's developments, and is now urging the British to lay their plans for a war to last at least five years. But we may estimate his own powers of discrimination by his observation on England of to-day. "The tidal wave of patriotic fervour, which was Berlin's in the autumn of 1914," has at last reached England "after two years of muddling, stumbling, and blundering," and to-day in England "there is no business and no routine except the business and routine of making war. Peace as a topic of conversation is almost taboo." All we need here say is that this is not the England we know, nor the England as known to Lord Bryce and Mr. Page, nor is it the England as reported to America by independent observers of their own countrymen both here and on the continent. But our reason for calling attention to Mr. Roy Howard's article is not to contradict his statements or to dispute his conclusion, but to note the sad fact that the representative of the United American Press has not one word to say as to the origin of the war or the morality of the belligerents. Rightly or wrongly, Great Britain and her Colonies believe that they embarked on a Holy War to resist aggressive might, and are still resisting a piratical and lawless foe. In this faith they will fight on to the end. They believe, too, that they have already enlisted the sympathy of all neutral nations, and hope that this sympathy may be shown in deeds as well as words. They are assured that they already have won the goodwill of all disinterested Americans who have weighed the facts, and they have faith that sooner or later, when the barriers fall, Right will be found triumphant over Might.

THE Annual General Meeting of the Modern Language Association will be held at University College on January 9 and 10. The French Ambassador will deliver the Presidential address.

JOTTINGS.

LORD KITCHENER NATIONAL MEMORIAL FUND.—The Council are asking teachers to aid them in their efforts, and suggest that the Annual School Concert offers a suitable occasion. If teachers will acquaint the Joint Hon. Secretary, Sir Headley Le Bas (34 Norfolk Street, London, W.C.), with the probable date, he will present them with a special book containing music, recitations, playlets, &c. We gladly comply with his request to make this offer known.

THE School of Technology, in the University of Manchester, has invited Prof. Arthur Green to take charge of a new department for advanced study and research in the subject of coal tar chemistry, with special reference to the dye-stuff industry. He will be assisted by Mr. F. M. Rowe, Dr. Hepburn, Dr. Knecht, and other experts. The department is open only to post-graduate students.

THE Pass List of the London Matriculation Examination, September, 1916, shows, as might be expected, some falling off in numbers. In the First Division there are 38 names, 9 of them women, and 9 from the public schools. In the Second Division there are 255 names. On the other hand, the work of inspection and examination of schools has continued to increase, examinations for certificates having been held during the last session at 124 schools, with 1,659 candidates for the Senior and 726 for the Junior School Examination.

THE *University Gazette* for November gives an additional list of deaths of Members and Officers of the University, serving in the War, numbering 175 names, and a further list of distinctions conferred on former cadets of the University of London O.T.C.; among these is the D.S.O., won by Lieutenant F. Sowrey, of the Royal Flying Corps.

THE attack on Prof. Etche in the House of Commons on November 9 is justly characterized by the *Spectator* as a flagrant example of spy-hunting gone mad. Herr Etche left Germany so long ago as 1872, to escape from the oppression of Prussianism, and he has since devoted most of his leisure time to the compilation of a catalogue of the Persian MSS. in the British Museum, declining repeated offers from Berlin of a Chair in Persian. In return for this gratuitous labour, which no English scholar was able or willing to undertake, it was seriously proposed by some ignorant fanatics in the House to intern our aged German benefactor.

THE appeal on behalf of two and a half million Belgian children by Sir C. C. Wakefield, the ex-Lord Mayor, backed by the Archbishop of Canterbury and the recognized heads of the leading Christian churches in Great Britain, needs only to be known to command support, but in the multitude of charitable causes it may be overlooked. Subscriptions should be sent to the National Committee for Relief in Belgium, Trafalgar Buildings, Trafalgar Square, W.C.

SEX EDUCATION.—A Research Committee of the Society of Education has undertaken an inquiry the object of which is, by means of a *questionnaire*, to collect from adults information as to the ways in which they as children became aware of the facts of sex, birth, and parenthood. Application for the *questionnaire* should be made to the Secretary, 9 Brunswick Square, W.C., and answers should be filled in and returned anonymously.

A CORRESPONDENT writes: "Having seen severely criticized the following arithmetical problem set in the last L.C.C. Junior Scholarship Examination (age eleven), I gave it to a class of some seventy-five training college students. Of these only 8 per cent. gave correct solutions, 50 per cent. were hopelessly at sea, and some, among them an Oxford graduate, pronounced it insoluble. Miss Robinson, who cycles to business every morning at nine miles an hour, regularly passes at the same spot Miss Jones, who walks three miles an hour. One morning Miss Robinson passes Miss Jones a quarter of a mile further along the road than usual. Supposing Miss Jones is punctual, how many minutes late is Miss Robinson?"

THE Council for the Study of International Relations announce two public lectures on December 1 and 7 on "The British Commonwealth," by Mr. Philip Kerr, and on "The Difficulties of International Organization," by Prof. Ramsay Muir, at Bedford College, Regent's Park, at 5 p.m.

THE death of Dr. John Todhunter, which took place on

October 25 at his residence in Bedford Park, in his seventy-eighth year, removes a man who was loved and trusted by the older generation of poets and playwrights. Like the Poet Laureate he was trained, and for several years practised, as a doctor, but his bias from the first was literary, and from 1870 to 1874 he was Professor of English Literature in Alexandra College, Dublin. His later poems expressed with grace and tenderness the Celtic Revival, and in one of his many plays, *The Black Cat*, he hit the popular taste. His translation of Heine's *Book of Songs*, published in 1907, was reviewed by us at the time, and, though it fails where all must fail, it comes far nearer to the original than either Leland's limping rimes or Sir Theodore Martin's facile fluency.

Two scholarships of £75 each are offered by *The Common Cause* (the organ of the National Union of Women's Suffrage Societies) to women who wish to qualify for positions as industrial chemists. Preference will be given to students willing to study at the Imperial College of Science and Technology, South Kensington, or the School of Technology, Manchester. Applicants, who must have a Science degree or its equivalent, should send in their names to the Scholarship Secretary, *The Common Cause*, 14 Great Smith Street, London, S.W., giving full particulars of their qualifications and of the course of research which they wish to pursue.

THE Annual Meetings of the Incorporated Association of Assistant Masters in Secondary Schools will be held on Wednesday and Thursday, January 3 and 4, 1917, at University College, Gower Street, London, W.C. On the first day, the Council of the Association will meet at 9.45 a.m., and on the second day at 9.45 a.m. and 2 p.m. The Annual General Meeting of members will be held on Wednesday, January 3, at 2.30 p.m., and the meeting will be addressed by the Right Rev. Bishop Welldon, Dean of Manchester. It has been decided that the Annual Dinner shall not be held this year.

THE fifth Annual Conference of Educational Associations will be held at the University of London from January 1 to 6, 1917. Meetings have been arranged by 23 Associations. The Inaugural Meeting will be held on Monday, January 1, at 3 p.m., when the Master of Balliol will give an address and Sir Henry Miers will take the chair. The meetings this year will be of special interest, as many of them deal with proposed educational reforms. A Publishers' Exhibition will be held as usual in the East Gallery. The following associations will take part in the Conference:—Art Teachers' Guild, Assistant Mistresses, Child Study Union, Civic and Moral Education League, College of Preceptors, Dalcroze Society, Domestic Subjects Teachers, Education Reform Council, Friends' Guild of Teachers, Froebel Society, Geographical, King Alfred School Society, Manual Training Teachers, Modern Language, Montessori Society, National Home Reading Union, Parents' National Education, Private Schools, Regional Survey Committee, Royal Drawing Society, School Nature Study Union, Schools Personal Service, Science Teachers, Simplified Spelling Society, Society of Education, Teachers' Guild, Training Colleges, Union of Private Governesses.

THE Annual Meeting of the Dalcroze Society will be held at the London University on Tuesday, January 2, at 5 p.m. The Rev. the Hon. Edward Lyttelton, D.D., will preside. Subject of discussion: "Dalcroze Eurhythmics as a School Subject."

IN connexion with the present campaign for the preservation of infant and child life, the governing body of the Battersea Polytechnic have arranged for a public lecture to be given by Dr. Saleeby. The lecture will be entitled "The Saving of the Future," and will be held at the Battersea Polytechnic, Battersea Park Road, S.W., on Thursday, December 7, at 7.30 p.m. No tickets of admission are required, and a cordial invitation to be present is extended to the general public.

ROLL OF HONOUR.—Captain A. Addenbrooke, Warwick Regiment, Assistant Master at Epsom College; Lieut. E. I. Barrow, South Lancashire Regiment, attached East Lancashire, Assistant Master at Modern School, Luton.

By the Rhodes Estate Bill the funds hitherto devoted to providing fifteen scholarships of £250 a year for German students at Oxford will be devoted to providing twelve of £300 a year, tenable by students from within the British Empire.

MR. C. W. KAYE, Head Master of Bedford Modern School, has been appointed Head Master of St. Bees.

REVIEWS AND MINOR NOTICES.

Sadoletto on Education. A Translation of the *De Pueris Recte Instituendis*. By E. T. CAMPAGNAC and K. FORBES. (7s. 6d. net. Oxford University Press.)

It is characteristic of the translators that they should choose this time of all others to bring Sadoletto to the notice of the English public. They are such convinced humanists that while most people are crying out for more science, and that of the most utilitarian kind, they calmly fall back on the teachings of an old Platonist who holds all the esoteric views of humanism, including the cult of the useless. He is doubtful whether to join in the blame of Archimedes for being drawn into the arena of common affairs, "and so violently dishonouring an art which owes its dignity mainly to its remoteness from the world of sense and sight, and its dependence upon mind and intelligence." At no time has this conflict of opinion, with regard to the application of science, been of more practical importance than to-day, and no saner plea for the humanistic bias could be found than the sympathetic presentation of the views of Sadoletto. It cannot be denied that the Cardinal goes to extremes in his claims for letters and for pure philosophy, but these are precisely the days when such strong partisanship can do no harm: indeed it is urgently needed to keep the balance between humanism and the new utilitarianism.

Sadoletto made his appeal rather to parents than to professional teachers. His book accordingly is of more value to the teacher as a man than as a schoolman. It is one of those books that help the expert to get back into the position of the layman, and examine his subject with eyes that have been for the time cleared from the disturbing refraction of professionalism. The dialogue form to some extent limits the freedom of exposition, and it has to be admitted that Sadoletto gains but little compensation in the way of artistic effect. His interlocutor, Paullus, a lad of eighteen, can hardly be expected to contribute much to the development of the subject, and as a matter of fact he inevitably falls into the acquiescent "Certainly, Socrates" attitude. He shares the fate of all the model pupils; he becomes irritatingly good, and says just the right things—from the educator's point of view. But, while it is probably true that the purely expository form would have been an improvement on the dialogue, it has to be admitted that the presentation of the subject matter has a certain charm, which the present reviewer at least is inclined to attribute to the skill of the translators. For when he had occasion to deal with the original text, some years ago, he found it rather dull and uninspiring. The crisp English, idiomatic yet dignified, has a good deal to do with the pleasure the reader finds in following the wise and kindly reflections of the old cardinal.

The Introduction is excellent, but, as a matter of arrangement, it would probably be better to transpose Sections I and II. As usual in any writing with which Prof. Campagnac is concerned, there is much that is striking and unexpected in the style, and there is a fair supply of the epigrammatic. We are not surprised to find such a sentence as "Consistency is the virtue of mean minds; they buy it with niggardly lavishness at the cost of spontaneity, and are paralysed by the chill treasure which they hug to their hearts." But we are delighted at the ingenuity with which it is applied to the case of Sadoletto, and we are not without a suspicion that the authors have a mental reservation in the way of an application to their own case. It is seldom that one finds such close sympathy between an author and his translators, and the result of this happy fellow feeling is shown in the ease with which the mental *entourage* of Sadoletto is reproduced in the Introduction. Further, the two authors have read the text in the light of an exceptionally wide knowledge of relevant literature, and the foot-notes throughout bring the reader into close touch with other educational writers who have dealt with the same subject-matter. It may, perhaps, be suggested that the writers quoted are mostly of the same way of thinking as Sadoletto, and some readers might prefer to have a few quo-

tations on the other side, say from Herbert Spencer. But after all, it has to be remembered that the quotations in the foot-notes are meant to be illustrative. The translators are not arguing a case, they are expounding a thesis, and the reader cannot but admire the skill and knowledge shown in the notes. Some readers may be disappointed that there is no index, but there is a singularly full analysis at the beginning, and since this takes the form of one-line headings, with page references, the whole being in exceedingly good type, there is no real cause of complaint. The marginal headings throughout the text make the guidance complete. Indeed, this is not a book that should be regarded as a work of reference. It is something to be read for its own sake, for its literary merits—a sort of "bedside book" in education, a book into which one can dip when one feels inclined, and always feel sure of getting something worth while. Its authors are to be congratulated on producing a notable addition to the literature of their subject in English.

My Days and Dreams. With Autobiographical Notes by EDWARD CARPENTER. (7s. 6d. net. Allen & Unwin.)

Edward Carpenter is probably the best known of the many distinguished men who have in recent years renounced Holy Orders, and the regard in which he is held by his wide circle of friends was shown two years ago in the address presented to him on reaching his seventieth birthday. It is noteworthy that he succeeded to the Fellowship of a more famous *défrôqué*. Of Leslie Stephen we hear nothing, but of other Cambridge friends and contemporaries we have many characteristic and piquant glimpses—the Master of the College, a nonentity who did as his wife bade him; the Dean, himself a cleric, who, when Carpenter mooted at a meeting of the Fellows the question of resignation, wondered why they should waste time over such "blasted nonsense" (names had better have been suppressed); W. K. Clifford, whose blasphemous quatrain would have shocked a more delicate stomach; the legal luminaries Moulton and Romer; and Augustine Birrell—then, as now, the genial and imperturbable humorist. These are thumb-nail sketches, but there are two kitcats—Henry Fawcett, whose blindness served only to stimulate his indomitable energy both of mind and body, and F. D. Maurice, under whom Carpenter served in his first and last curacy. To Maurice he was attracted, as few could fail to be, by his single-minded sincerity, and his theology appeared to him a mighty maze without a plan. After a couple of years of indecision he resolved to take the *salto mortale*, and left the secure competency of a clerical Fellowship for the laborious and uncertain career of an Extension Lecturer under the auspices of James Stuart. The ensuing *Wanderjahre*, the dull monotony of solitary lodgings, and the wrangles of the ladies who formed the local committee are described with genial humour, but it is no wonder that he should have hailed the death of his father as a welcome release from a burden that he had found intolerable.

Of schooldays and his life at Brighton there is little to be said. By his own account he was a solitary, who made no friends and lived apart both from home and from school. In fact, it was not till after he had left College that he found himself. That this was his own fault he frankly owns. His elder brother had been *dux* of the school, and deservedly popular; and of his sisters, two at least were women of marked ability. His father, though a recluse and given up to philosophy, was a man of liberal views and a keen politician, and his mother, in spite of a strong puritanical strain, was bound up in the welfare of her children. His only pleasure was to lie on the downs and dream—dreams more vague than those of Alastor. His regeneration, or new birth, he dates from his discovery of *Leaves of Grass*, confirmed by the visit he paid to Walt Whitman in 1877. To the primitive philosophy that he thus absorbed—the glorification of the body, as it may not unfairly be called—he has persistently adhered, though it has been modified by Oriental theosophy and his visit to a *Ghāni*.

Of Millthorpe and all his partners in manual labour—of his democratic propaganda, and of what Carpenter would doubt

less consider a leading factor in his life, his treatment of sexual relations—we have said nothing, and must refer our readers to the Bibliographical Appendix, which occupies ten pages of small print.

Edward Carpenter began life as a dreamer, and as a dreamer he ends. In the War he sees the dawn of a new civilization which shall end the eternal struggle between capital and labour, the haves and the have-nots; when every man shall sit under his own vine and fig-tree, and be content with the fruits of the earth. The War has indeed stirred the laggards, and inspired in many a new spirit of patriotism and devotion to a common cause, but so far it has tended rather to emphasize international differences and dissolve the federacy of Socialists. The German *Schwärmer* is gagged, or sings songs of hate, and the American dreamer "wraps himself in his virtue, though dowerless Poverty is not his bride." Edward Carpenter's *civitas dei* is not our ideal, but none the less we welcome a true idealist who has the courage of his opinions.

The Life and Letters of Theodore Watts-Dunton. By THOMAS HAKE and ARTHUR COMPTON RICKETT. 2 vols. (30s. net. Jack.)

These sumptuous volumes, with their sixteen full-page illustrations, should rather have been entitled "Reminiscences of Theodore Watts-Dunton and his Friends" than a "Life and Letters." The *Life*, in brief, has been written by Mr. James Douglas, to whom a generous acknowledgment is paid by Mrs. Watts-Dunton. The present biographers have, however, enjoyed the advantage of consulting all the letters, an accumulated record of more than fifty years of his literary life, bequeathed to his sister, Miss Theresa Watts. But instead of the "Authoritative Biography" that we are promised we have dissolving views of the many famous men with whom Watts-Dunton was brought into more or less close contact, and appreciation by men and women of mark whom he had served, all panegyric, but hardly one professing to be critical. It comes as an agreeable relief to find in the "Impression" contributed by one of his later-day friends, Mr. J. L. Lambe, a dissentient note:—

His claim to permanent recognition lies in the suggestive value of the vivid flashes of poetic insight which irradiate his essays His interest in life was that of a healthy and clever boy to the very last His literary and philosophical generalizations must, however, be taken with caution; even in the best of his work they are apt to be vague, illogical, nay, sometimes almost contradictory. He had none of the aloofness of the philosopher. We quote this because of its rarity, and omit all the preceding testimony to Watts-Dunton as an original critic and a generous friend.

Of what specially concerns and interests us, his schooling and apprenticeship, we hear too little. He was sent by his father, a country solicitor, at the age of ten to an academy for young gentlemen at Cambridge, where he seems to have held his own partly by his wits and partly by his proficiency as a boxer, taking lessons in the noble art from the famous "Sambo." Here he stayed for seven years and received instruction in Latin, Greek, German, and French; but it was only with French that he gained any familiarity, and for the other tongues he depended almost wholly on translation. From Cambridge he passed directly to his father's office in St. Ives, and though, as he tells us, every spare hour was devoted to poetry, he must have acquired a substantial knowledge of law, for at the age of forty, when he settled in London, he was offered a partnership in the well known firm of his uncle. Long before this he had dabbled in literature, but it was as a legal adviser and a forerunner of the literary agent that he was brought into intimate relations with William Morris, Madox Brown, Dr. Gordon Hake, and, above all, with Rossetti and with Swinburne—a relationship that is for us the most interesting portion of the *Life* and the part that we predict will perpetuate the memory of Watts-Dunton.

It would be easy to carp at many of the literary judgments passed on his contemporaries and on the reticences—some of them due to a scrupulous concern for living persons; and we may fairly complain that the half is not told, and that

some whom we knew in the flesh are here only passing shadows; but of the forty years during which, in Fenland, he "nourished a youth sublime," and of his calm and beautiful old age, there is more that even now might safely be told. The index, too, leaves much to be desired. The name of Theodore Watts is not recorded; in "Tennyson: A Memoir," the name fills five closely printed pages.

(1) *Outlines of Sociology.* By FRANK W. BLACKMAR, Ph.D., Professor of Sociology and Economics in the University of Kansas, and J. L. GILLIN, Ph.D., Associate Professor of Sociology in the University of Wisconsin. (8s. 6d. Macmillan.) (2) *War and Civilization.* By the Right Hon. J. M. ROBERTSON, M.P. (2s. 6d. Allen & Unwin.)

(1) Sociology as a science is on trial. Its hybrid name always raises a question in one's mind as to whether it is not also a hybrid study. It almost inevitably assumes a mechanical theory of the universe, and covers its philosophical weakness under a flood of interesting and important facts which it describes. The volume by Profs. Blackmar and Gillin is no exception to this rule. Whether it is a law of Nature or a condition of the tenure of his chair that every American professor should produce a volume on his subject of quite five hundred pages, every one of them seems to do it. Perhaps the scientific fatalism which they expound is the cause of their practice. Certainly the results are dreary enough. We have a sufficient example of the quality of their sociological theory in their treatment of religion. "Can we not say at least that man believes that good will triumph over evil because such a belief has made him better able to survive? . . . Religion may be a delusion, but, if so, it is a beneficent one." There we are in the thought of fifty years ago! Our professors have not got beyond Herbert Spencer and survival values—barely so far perhaps. But, if religious judgments are based on a beneficent delusion, is there any sufficient reason for our thinking that æsthetic or ethical judgments, or even our judgments of perception or of number, are anything more? I believe that 2 and 2 are 4, because it is beneficent and helps me to get along in life. Its survival value has fixed it as something which I cannot help thinking, but it corresponds to no reality in things. When we look at the index and find seventeen references to Herbert Spencer and six to J. M. Baldwin, while there is none at all to Bergson, we are not surprised. Is it really worth while to accumulate these laborious facts of a "sociological" (why not call them "social"?) order if this is the best that can be made of them?

(2) Mr. Robertson has had easy work with a sociological charlatan from Sweden. His book is an open letter to Dr. Gustaf F. Steffen, Professor of Economics and Sociology at Stockholm, sent in acknowledgment of the gift of his book, *Krieg und Kultur*, which has had something of a vogue in Germany. Perhaps 150 pages were too many to waste on him. For Dr. Steffen's theme is a simple one. German *Kultur* is superior to British. Therefore the Germans cannot have committed the atrocities with which they are charged by the Briton. One cannot help wondering whether the conscientious and careful record of the more notorious of German brutalities which Mr. Robertson has set down is really worth while; for those who can swallow such stuff as Dr. Steffen deems to be sociology will not believe if one of the French or Belgian victims comes back from the dead to testify to the truth. On the whole these two books do not put one in love with "Sociology," as, still too often, quite falsely apprehended. Whether German atrocities have even a survival value it remains for the future to prove. Verdun throws a doubt on it at the time of writing.

Reform and Religion in Public Schools. By J. D. ROBERTSON. (1s. net. Robert Scott.)

The essence of this book is contained in the following quotation:—

Boys may be preached to and sung to, or preached at and sung at, or sworn at, but unless they are taught the meaning of the

Incarnation and its extension in the Mass, that Jesus in the Mass and in the Confessional will save them from sin . . . it would be far better to educate them with no profession of religion at all . . . for then the Church of God would not be blamed for the moral failures of the English public-school system.

One may reasonably admit that the religious teaching in our public schools suffers overmuch from doctrinal indefiniteness, and that the majority of the sermons in chapel savour too strongly of the moral essay, but it will be a long day, we think, before Mr. Robertson's system is adopted. There is little in his volume to show that he has appreciated the difficulties involved in any such scheme as he proposes, or that he realizes the profound change which would of necessity come over the whole character of our public-school training. Not a few will hesitate to take Mr. Robertson as a guide, when they read (page 31) that he urges that a boy should be pressed to make his confession before his parents are consulted on the matter. It is time, he says, to deal with the opposition of the parents after the confession has been made. In a matter of this kind a boy would naturally wish to consult his parents, and the parents certainly have a right to be consulted. The procedure advocated by the author will strike the average man as being hardly honourable.

Poetry and National Character. By W. MACNEILE DIXON.
(Cambridge University Press.)

Prof. Dixon has republished the Leslie Stephen Lecture which he delivered last year in Cambridge, and it is valuable in that it opens up a field of thought which, needing dispassionate handling, might have important educational fruits. As the lecture stands, it is almost too slight for any serious discussion or criticism, though the main proposition of the thesis emerges with perfect clearness and should be studied. Freedom and emancipation have shaped our great literature and stamped it with the qualities of our genius. But Prof. Dixon shows in no unmistakable language that the spirit of independence of tradition, and originality and emancipation have had their peril at all periods and have now become a danger that we can no longer disregard. The key-note of the position taken up is emphasized in the concluding words. "The smooth and bright perfection of marble, the substance in which the qualities of the Greek spirit found their exquisite symbol, is beyond the reach of our language and our poetry. The most we can hope for them, and that only if we submit to uncongenial discipline, is the strength and durability of bronze."

Indian Tales of the Great Ones. CORNELIA SORABJI.
(1s. 6d. Blackie.)

This collection of Indian folk-lore and fairy tales by Miss Sorabji will be especially appreciated by the younger children just able to read. Their elders have probably become familiarized by that classic "Old Deccan Days," and will therefore fail to derive the delightful sense of novelty and whimsicality with which one is always struck in reading for the first time Eastern stories of an imaginative nature. Miss Sorabji tells her stories with admirable simplicity and directness, and there are a number of clever little black-and-white illustrations by Mr. Warwick Goble.

Raymond; or, Life and Death. By Sir OLIVER LODGE.
(10s. 6d. net. Methuen.)

Raymond, the youngest son of Sir Oliver Lodge, was one of the noble army of martyrs who have voluntarily laid down their lives for the fatherland and freedom. Educated at Bedales School and Birmingham University, where he studied engineering, after two years' practical training at the Wolseley Motor Works, he entered the works of his older brother, where he remained till he volunteered on the outbreak of the War, and, after an apprenticeship in home service, was sent to the Front with the 2nd South Lancashire Regiment in the early spring of 1915. His practical skill as a mechanical engineer, and later on as an instructor in machine gunnery, was fully recognized by his superior officer, but a brilliant career was cut short in his twenty-seventh year by a cannon shot while he was in command of C Company and preparing to evacuate a front-line trench during the Loos battle. Such is a bare record of the bare facts which serve as a preface to Part I, "The Supernormal Portion," and Part II, entitled "Life and Death," is an exposition of the philosophy of spiritualism. To deal with these at all adequately would far exceed our limits. Sir Oliver gives us a fairly full account of various *séances*, and we can trust him as a faithful reporter, but evidence that may carry conviction to those who know all the assistants, both those of the family and the "controls," cannot carry weight with outsiders. The writer can only say that in his sallet days he attended many

séances and knew many of the leading members of psychical research, and that he still remains a sceptic. As in the case of F. W. Myers, no evidence has so far been produced that would satisfy a jury of the Royal Society. While welcoming all inquiries by men of science such as Sir Oliver Lodge, we would emphasize his warning to the public not rashly to dabble in spiritualism, and, we would add, to fight shy of professionals, most of whom have proved themselves impostors like Eusapia and Browning's Mr. Sludge.

A Pocket Lexicon to the New Testament. By ALEXANDER SOUTAR. (3s. net; on India paper, 5s. 6d. net. Clarendon Press.)

This pocket dictionary is intended for the use of theological students and such as read the New Testament with no previous knowledge of Greek. It is recommended by its admirably clear type and its brevity. There is no indication of gender, declension, or conjugation, and references to the passages where the words occur are given only in exceptional cases. This omission seems to us a mistake. The layman who meets such words as *εἰδότες*, *ἡλθε*, will not know where to turn. On the other hand, *πνεῦμα* has more than a page, and *ὁὖς τοῦ ἀνθρώπου* nearly a page. In the brief bibliography we miss the name of E. A. Abbott, who has devoted so many years to elucidating the language of the New Testament.

The Political History of France, 1789-1910. By M. O. DAVIS.
(2s. 6d. net. Clarendon Press.)

This outline is written freshly and simply; a class could read it by themselves, and might even like to do so. The description of revolutionary France is clear and interesting. It is a pity that the treatment of the period from 1830 is compressed into forty pages.

An Introduction to the History of England. By E. L. HASLUCK. (2s. 6d. Black.)

As a reader for the London Matriculation Examination this book is well suited to its purpose.

History. Vol. I, No. 2, July, 1916. Edited by Prof. A. F. POLLARD, Litt. D. (1s. Macmillan.)

All who are anxious that History should be taught efficiently will be glad to see the evidence of the good work done by the Historical Association that is afforded by this number of its *Quarterly Journal*. It contains, along with other matter, some excellent articles on historical subjects, one of them, the first instalment of an account of the Colonization of Ulster, by Miss Constantia Maxwell, being especially valuable. We have also received the Association's *Annual Bulletin of Historical Literature* for 1915, edited by Prof. F. Hearnshaw, a useful compilation, in which to the books cited are appended short notes on them by well known historical scholars.

Laws of Speech-Rhythm. By WILLIAM THOMSON.
(1s. net. Maclehose.)

This brief pamphlet is at the same time the summary of a remarkable brochure, published by the author some ten years ago, and the prelude to a complete work on rhythm for which we must wait till happier times. Meanwhile, as a provocative and challenge to students of metre, he has formulated twenty-four Laws of Rhythm. We cannot but regret that room has not been found for the two following chapters designed to elucidate and illustrate these laws. Our old contributor, Mr. T. S. Omond, has approved the original principles that he lays down; but such students are rare, and at each turn we miss the application.

Longmans' Explicit Arithmetics. Pupil's Book VII; Teacher's Book VII. (8d. and 1s. 6d. respectively.)

The matter in these books is suitably chosen to meet the requirements of the highest standard in the ordinary elementary school, and the treatment outlined in the Teacher's Book is of a practical character. The general scheme is good, but there are errors in detail. The answer to Example 90 (B 3) is not only wrong, but indicates a false method of solution, and a more careful revision would have resulted in reframing such an example as "The axes of an ellipse are 6 in. and 4 in. A second ellipse is drawn round this, so that the strip between the two ellipses is of a uniform width of 1 in. &c."

More About how to Draw in Pen and Ink. By HARRY FURNISS.
(3s. 6d. net. Chapman & Hall.)

Mr. Furniss heads his first chapter, "Its Commercial Use," and this, on the whole, gives the key-note of the book. It is thoroughly practical from a commercial point of view; it is clever, entertaining, and often flippant. The chapters on character-drawing and caricature will probably be the most interesting ones for the general reader. The book ends with an amusing chapter on "Drawing for the Cinematograph."

RUSSIAN.

A New Pocket Dictionary of the English and Russian Languages. Compiled from the best authorities by J. H. FREESE, M.A. Cantab. (5s. Kegan Paul.)

The appearance of this little dictionary will be welcomed by all the numerous students who have hitherto been trying to master the Russian language without any better assistance than that afforded by Alexandroff's very imperfect dictionary. The present work is based upon C. Blattner's *Taschenwörterbuch der russischen und deutschen Sprache* (1911). But the best dictionaries existing in German and French have been consulted, and the large and (unfortunately) expensive Russian *Slovar* of Vladimir Dal. The dictionary under review is very carefully compiled, and will take its place as a standard work indispensable to beginners and useful for advanced students. The type is clear, and the short introduction will be found very useful. The pronunciation in English is given after every Russian word; whether it was worth the while to insert the pronunciation in every case is doubtful when we remember that Russian writing represents the correct pronunciation of the word very fairly, and that a chapter at the beginning of the dictionary is devoted to the rules and exceptions of Russian phonetics. If this somewhat unnecessary adjunct were omitted there would be room to insert more information as to the irregularities in the conjugation of verbs, a defect which we hope to see corrected in another edition. Under each verb should be given the indefinite branch, the perfective branch, the first and second persons of the present, the past indefinite, the past perfective, the future perfect, and the first person imperative of each branch. Thus, *nyesti* (to bear), *ponyesti*, *nyesi*, *nyeshyesh*, *nyés*, *ponyés*, *ponyesii*, *nysi*, *ponyesii*. If the insertion of all these forms is merely a counsel of perfection, a table embracing the chief irregular verbs might well be added. It would also be of extreme help to classical scholars if it were possible to give in connexion with those Russian verbs which possess kindred forms in Latin and Greek descended from the same original Aryan root the words as they occur in the classical languages; this plan would also conduce to the study of Slavonic philology. We are certain that this dictionary will be an important aid to the study of Russian, in which so many of our countrymen are at present engaged; and we have now to express our hope that the supply of qualified Russian teachers may prove equal to the demand. But it must be stated that for advanced students there is a crying need of a much larger and fuller dictionary than the small work under review.

Word-for-Word Russian Story Book. With Interlinear Phonetic Transcription and Translation, accented and annotated by NEVILL FORBES, M.A., Reader in Russian in the University of Oxford. (1s. 6d. Oxford: Blackwell.)

This is a collection of easy Russian stories for the use of beginners in the study of the Russian language. The compiler is quite justified in the assertion made in the preface, that the stories included are all illustrative of sound colloquial Russian, and full of idioms in everyday use. Most of the anecdotes are beast stories of which the Russian language possesses a large store. The interlinear transliteration is of course a great help to the learner in acquiring a correct pronunciation, but it cannot too often be repeated that it is indispensable for the beginner to take a few lessons at the outset from a Russian, as there are certain sounds which no transliteration can reproduce, but which may be easily acquired by any student with a reasonably good ear. Such is the sound of Russian *ui*—in the Russian word for "he has been"—*byl*—transliterated by *y*: but really pronounced as something between *y* and German *ü*: and the sound of the softening Russian *yeri*, commonly transliterated by an inverted comma. A very large collection of such simple stories intended as a first Russian reader was published by Count L. H. Tolstoy in 1898; it would be a simple matter to reprint these in England with some notes, and it is to be desired that some scholar should bring out H. Tolstoi's Reader for the benefit of English beginners, as it contains such a large collection of characteristically Russian stories. But the little book under review is well compiled and the notes are good and accurate.

Leo Tolstoy: Sevastopol. Edited by A. P. GOUDY, M.A., Lecturer in Russian in the University of Cambridge, and E. BULLOUGH, M.A., Fellow of Gonville and Caius College. (5s. Cambridge University Press.)

This well known work of Tolstoy's has now been edited and presented to the public by two eminent Russian scholars in a form worthy of the best traditions of the Cambridge University Press. The type is particularly clear and pleasant to read, and the words are accented for the use of English students. It is satisfactory to find that our Universities possess and employ a fount of Russian type, and likewise to note that reviewers of Russian books have begun to write Russian words in Russian type, just as they write

Greek words in Greek characters. The introduction contains a clear and concise account of the events which led up to the unfortunate Crimean War, in which our diplomats were misled into "putting their money on the wrong horse," and laying up for their country a store of illwill and suspicion which, we trust and believe, is rapidly being dispelled by the intimacy of the relations between the two great Empires now united against a common foe. An admirable appreciation of Tolstoy and his works follows, of which we would gladly have given a specimen. The notes explanatory of the text are judicious and full, and if the student will peruse them carefully he will find that he has learnt much of the difficult Russian grammar in the process. It might, perhaps, be advisable in a future edition to refer in the notes to passages in some definite Russian grammar, such as that by Mr. Forbes: the reference to some definite rule aids the memory. A photograph has been used as frontispiece which was taken in 1856, and shows Tolstoy as an officer of artillery, in which capacity he took part in the siege of Sevastopol.

It is to be hoped that scholarly editions of Russian works like the book under review may encourage English students to persevere in their endeavours to master the beautiful Russian language. Russian critics have of late been very severe upon English translators of Russian works: perhaps a little too severe, considering the very great difference in the character and the harmony of the two languages. Any given page of Tolstoy will illustrate many of the peculiarities which combine to make the Russian language so delicate an instrument for the expression of different shades of human feeling and will likewise illustrate its musical powers. The varying position, and the seeming irregularity, of the strong Russian accent are at once an aid and an incentive to a Russian author in taking extreme pains to make his cadences harmonious, and it will probably be found that Slavonic authors attach as much importance to such cadences as did the famous orators of classic times. When we hear an educated Russian read his own language we can understand the feelings of Tourguénieff, who expressed his certainty that a nation with such a beautiful language as his native tongue could never perish.

The Chameleon and four other Tales. By ANTON CHEKHOV. Edited, with Introduction, Notes, and Vocabulary, by P. SELVER, B.A. Hons. (London). (Kegan Paul.)

This handy and cheap little book is very well adapted for the use of readers who have mastered the main difficulties of the grammar. The notes are scholarly and supply just what is wanted to explain the numerous idiomatic phrases which are more common in Russian than in most languages. The stories are well chosen and are all characteristic of Russian life and of Russian traits. It would be an advantage to the reader if the difficult words explained in the notes were also inserted in the vocabulary, as, according to the present arrangement, the learner has to refer to the notes and the vocabulary as well. Many of the notes might well be shortened if the word explained were inserted in its natural place in the vocabulary and its idiomatic meaning there explained. There are very few misprints, and the text is clear and well printed. On page 7, line 12, the Russian word for "you will find" is awkwardly printed; and on page 55, line 3, a false reference is given. It would interest classical students if some of the Russian words were compared with their classical congeners; a little philology is a great aid to memory. The book is one of the best that we have seen for its purpose.

GERMAN SCHOOL BOOKS.

- (1) *Passages in Prose and Verse from German Literature in the Nineteenth Century, 1800 to 1870.* By M. E. WEBER, L.L.A. (Cambridge University Press.)
- (2) *German Unseens.* By A. R. FLORIAN, M.A. (3s. Rivingtons.)
- (3) *A First German Grammar.* By ALLEN and PHILIPSON. (Ginn.)
- (4) *Deutscher Sagenschatz.* By F. W. WILSON, Ph.D. (1s. — "Bell's Simplified German Texts." Section B.)
- (5) *Chapters from German History.* An Elementary Reader. By A. MEYRICK. (2s. Oxford University Press.)

(1) "This anthology . . . contains no introductions, notes, or vocabulary, as the last should not be needed by students capable of profiting by the book, and the others are left to the teacher," says Miss Weber in her preface. Is it not a fair criticism that students capable of reading this volume without a vocabulary would not read it at all, but would go straight to the originals? This reserve made, one has nothing but praise for the judiciousness of selection from the works of these writers of the first seventy years of the nineteenth century. Miss Weber has been wise not to curtail the length of her chosen passages. The pages are big, and the volume, though of generous proportions, is easily handled because of its lightness.

(2) Mr. Florian has put together a most attractive set of selections of graduated difficulty "from the standard of Junior Local

Examinations to that of the Intermediate Civil Service and Intermediate Arts Examinations." Prose and poetry are both represented, and the writers of many a decade, from Goethe, Freytag, and Rückert to Heine, Raabe, Sudermann, and—Bernhardi! The fragments vary in length: that is to say that they are suitable for written work or for round-the-class translation. The print is large and clear.

(3) This is a dull book. It is, moreover, portentously long—436 pages. The plan adopted seems good in the abstract, German reading material serving as basis for conversational and written exercises. But even when we arrive at the last lesson (the seventy-seventh), the passages for reading still consist of a number of isolated sentences of the type: "Ich würde eine grosse Reise gemacht haben, wenn ich das Geld dazu gehabt hätte." There are, however, a few short pieces of poetry dotted about.

(4) *Deutscher Sagenschatz* is full of fascination. Tales of Balder, Loki, and Siegfried, of Barbarossa, the Pied Piper, and the Mouse Tower—the little pitchers are willing to be filled to the brim with such intoxicating beverages. Mr. Wilson is no fanatic. His notes are for the most part in German, but he is not above an occasional explanation in English. The exercises, both oral and written, are the work of a practical man. The book should attract many teachers.

(5) is designed to give children who have been learning German for about a year an idea of the main facts of German history from the times of Hermann onwards. The treatment is biographical. The style is simple, direct, and the matter full of interest. English school-children are lamentably ignorant of any history but that of their own country. The book therefore supplies a felt want.

MUSIC.

Kookoorookoo, and other Songs. Words by CHRISTINA ROSSETTI. Music by WALTER ALCOCK, Mus.Doc.; Sir FREDERICK BRIDGE, Mus.Doc.; PERCY BUCK, Mus.Doc.; H. WALFORD DAVIES, Mus.Doc.; THOMAS F. DUNHILL; CHARLES H. LLOYD, Mus.Doc.; Sir ALEXANDER MACKENZIE, Mus.Doc.; Sir WALTER PARRATT, Mus.Doc.; Sir CHARLES HUBERT H. PARRY, Mus.Doc.; ALFRED J. SILVER, Mus.Doc.; Sir CHARLES STANFORD, Mus.Doc.; DONALD F. TOVEY, B.A.; CHARLES WOOD, Mus.Doc. (2s. The Yearbook Press.)

A remarkable little volume of songs, delightful words, and equally delightful music. Such a work, which has obviously been a labour of love on the part of both composers and publishers, should find a ready acceptance by the English public. Of the twenty-six numbers which comprise the collection, there is not one that does not attain a very high level of excellence. It has been said that our English composers have lost their capacity for writing tunes. If such an impression still exists, a study of these little songs should speedily dispel the illusion. Many of our younger composers might study the volume with advantage. Whether from the point of view of the melody, the harmony, or the accompaniments, they are models of what such settings should be.

The Best School of All. The Words by HENRY NEWBOLT. Set to music for Harry Plunket Greene, Arthur Peppin, and the Clifton Boys by C. HUBERT H. PARRY. (3d. Yearbook Press.)

A stirring unison song which will assuredly find its way into many schools besides Clifton.

Grey Stones. Words by JOAN RUNDALL. Music by CHARLES HARFORD LLOYD. (3d. Yearbook Press.)

An unaccompanied three-part song for two sopranos and contralto. Dr. Lloyd writes very gratefully for voices, and ladies' choirs will welcome this recent part-song. Perhaps, now that Dr. Lloyd has retired from Eton, he may have more leisure for composition. We hope so.

The Larchwood. Words by JOAN RUNDALL. Music by CHARLES HARFORD LLOYD. (3d. Yearbook Press.)

A flowing little two-part song with pianoforte accompaniment *ad lib.* The simple accompaniment just serves to support the voices without overpowering them. The Tonic Sol-fa syllables are printed above the notation in this, as in the other part-songs issued by the Yearbook Press.

The Skylark. Words by JAMES HOGG. Music by G. H. SMITH. (3d. Yearbook Press.)

An unaccompanied three-part song. Quite a simple setting of familiar words.

By Dimpled Brook. Words from DALTON's adaptation of "Comus." Music by THOMAS F. DUNHILL. (3d. Yearbook Press.)

A well written three-part song. The independent entries of the different voices give a feeling of vitality to the music, even if they add slightly to the difficulty of the performance.

UNIVERSITIES AND SCHOOLS.

ROYAL COMMISSION ON UNIVERSITY EDUCATION IN WALES.

The Royal Commission on University Education in Wales held its first sittings for the hearing of formal evidence on October 4, 5, and 6, at the Offices of the Board of Education, Lord Haldane in the chair. The evidence taken related to the University College of South Wales and Monmouthshire and the National Medical School, and the following witnesses were heard:—

October 4.—Witnesses representing the Council of the University College of South Wales and Monmouthshire: Principal E. H. Griffiths; Mr. H. M. Thompson (Treasurer); Mr. D. J. A. Brown (Registrar); Miss E. P. Hughes, Mr. H. M. Ingledew (Members of Council).

October 5.—Witnesses representing the Senate of the University College of South Wales and Monmouthshire: Profs. Norwood, Thompson, Sibby, Bacon, Hepburn. In connexion with proposals as to teaching of theological subjects: The Rev. T. H. Robinson.

October 6.—Witnesses representing the Governors of King Edward VII's Hospital, Cardiff: Colonel Bruce Vaughan, Rev. Canon David Davies, Dr. Rhys Griffiths, Dr. Mitchell Stevens, Dr. Ewen Maclean, Dr. Paterson. In connexion with the Public Health Department: Dr. Walford, Dr. Morgan. Postponed from October 4: Mr. Percy E. Watkins (Member of Council of University College of South Wales and Monmouthshire).

UNIVERSITY COLLEGE, READING.

Scholarships have been awarded as follows:—A Major Open Scholarship in Arts, of £65 per annum, to Elsie Calam (Huddersfield Technical College); a Major Open Scholarship in Science, of £69 per annum, to David M. Powell (Caterham School); a Major Open Scholarship in Agriculture, of £69 per annum, to Douglas H. Robinson (The Paston School, North Walsham); a Scholarship in Fine Art, of £30 per annum, to Leonard W. Cusden (Wilson School, Reading); a Scholarship in Music, of £26 per annum, to Eileen M. Sly (St. Joseph's High School, Reading).

UNIVERSITY OF BRISTOL.—FACULTY OF ENGINEERING.

Merchant Venturers' Scholarships, tenable in this Faculty, have been awarded to the following students:—George Henry Farleigh, Queen Elizabeth Grammar School, Crediton; Kenneth Allen Hayes, Merchant Venturers' Secondary School, Bristol; Herbert Douglas Kendall, Merchant Venturers' Secondary School, Bristol; Arthur Patrick Mitchell, Devises Secondary School; Geoffrey Howard Leslie Smith, Bristol Grammar School.

ROYAL HOLLOWAY COLLEGE.

The following awards have been made by the Governors of the Royal Holloway College:—

Scholarships of £60 for three years, to—Miss D. Lindsey (Mathematics), Rutherford College Girls' School, Newcastle-on-Tyne; Miss A. M. Walton (History), Burnley High School; Miss C. M. H. White (French and German), Portsmouth High School. Scholarship of £50 for three years, to—Miss E. V. Baker (French, with credit for Latin), King Edward's High School, Birmingham; Miss W. E. Beale (History), Wellingborough County High School; Miss E. W. Birks (Mathematics), Queen Elizabeth's Grammar School, Mansfield; Miss E. J. Gadsby (English), Clapham High School; Miss F. T. Prichard (Classics), Clapham High School; Miss M. Rostron (French and History), Burnley High School; Miss G. E. G. Shaw (Botany and Pure Mathematics), St. Saviour's and St. Olave's Grammar School; Miss E. H. Usherwood (Chemistry and Botany), North London Collegiate School; Miss K. M. Warren (Mathematics), Hitchin Grammar School. Scholarship of £40 for three years, to Miss E. A. Stidston (English, with credit for History), Clapham High School. Martin-Holloway Scholarship of £40 for three years, to Miss S. W. Skan (Chemistry, with credit for Physics), Twickenham County School.

THE St. Dunstan's Exhibition of £60 a year, tenable at the London School of Medicine for Women, has been awarded to Margaret Salmond, St. Paul's Girls' School.

UNIVERSITY OF QUEENSLAND.

It is interesting to note the incidents of development taking place in the Queensland University after the completion of its first

quinquennium. The sixth annual report reached London by the last Australian mail, and from it we learn that the library contains 12,000 volumes, and that 71 undergraduates matriculated in March 1915; the number of students who attended lectures and laboratories during the year was 253. We note that the Orient Steam Navigation Company give two free passages to Great Britain annually to students who have gone through a prescribed course of study. These were awarded last year to two young Queenslanders, one of whom is now at Edinburgh University, and the other entered the service of the General Electric Company at Rugby. Forty members of the University have joined the Services, and all four of the Queensland Rhodes Scholars have received commissions in the British Army. The University War Committee have stimulated recruiting, and the laboratories have been made available for chemical and physical munitions tests.

During the year the University has become affiliated with Cambridge University. Under this scheme, graduates of Queensland University who have attended classes for three years, and who have passed in Latin or Greek, one modern language (not being English), and mathematics, shall be entitled to affiliation. In 1915, twenty-four B.A. degrees were conferred, two B.Sc. degrees, and four B.E. degrees. As originally planned, the Academic year extended from the eleventh to the forty-second week of the calendar year; this is now altered, and the year ends with the forty-third week. The income in 1915 of the University was about £40,000.

WALES.

The Annual General Meeting was held at Shrewsbury on Friday, November 3, 1916. The President, Mr. A. J. Perman, M.A., in his valedictory address, dealt sympathetically with the responsibilities and opportunities of the teacher. Realizing that at

present all teachers in Wales are overburdened with technical and expert advice, Mr. Perman very wisely tried to bring the Association back to the fundamental principles underlying their work in school. His conception of their work was a lofty one, and his address will act as a stimulus in the difficult times through which they are passing in the schools.

The Association is desirous that its views upon the relationship of the schools with the University should be expressed before the Commission, and great care and consideration were spent in framing suitable resolutions. One of the questions which has been much discussed in Welsh educational circles is the proper age for transferring a pupil to the University from the secondary school; while another controversial matter is the extent to which the colleges should recognize post-senior work in the intermediate schools. The majority of the schools are dissatisfied with the attitude of one or two of the colleges because they are not prepared to give credit to the higher and honours work of the pupil. The schools maintain that this recognition should be reduced to a definite system by agreement between the University and the Board, and should not depend wholly upon the professors. A wider acceptance of the post-senior certificates of the Central Welsh Board would not only be to the advantage of the pupils, but would also materially strengthen the University by increasing the number of its honours candidates. The views of the Association on these questions are expressed in these resolutions:—

"1. That, for the proper development of secondary education in Wales, it is essential that the Intermediate schools should continue to provide courses of a post-Senior character.

"2. Experience has shown that a fair proportion of pupils in all schools are fully qualified to take advantage of such advanced instruction, apart from those who intend proceeding to the University.

"3. As regards pupils who propose entering the University of Wales from the Intermediate schools, it is recommended that those who have attained at the Higher Certificate stage a certain standard of marks mutually agreed upon by the University and the Central Welsh Board be regarded by the University as having passed the Intermediate Examination in such subjects.

"4. As a general rule, it is not in the interest of the students morally, intellectually, or financially that they should enter upon a University career before the age of eighteen.

"5. That not only is the Association strongly of opinion that Latin should not be an obligatory subject for Matriculation, but that the time has come for doing away with the present grouping of subjects in the Matriculation syllabus so as to allow freedom of choice. Under existing regulations candidates not taking Latin are unduly penalized by being obliged to take alternative subjects involving greater preparation."

At the same meeting a most exhaustive paper on "The Future Development and Organization of Education in Wales" was given by Mr. E. T. John, M.P.

The President of the Association for 1917 is Mr. J. R. Roberts, M.A., Ruabon School.

The half-yearly meeting of the Board was held at Shrewsbury with Lord Sheffield in the chair, on November 17.

The Central Welsh Board. The question of Welsh was discussed at some length, and several ardent patriots seized the opportunity for expressing somewhat extreme views.

It was evident that the Board, as a whole, does not support such views, though it was allowed that if the language is to be preserved some drastic steps will have to be taken. On the motion of Mr. William George a committee was appointed to report on the steps taken in primary and secondary schools to teach Welsh.

The chief topic of discussion, however, was the proposed National Council of Education. So far, the Central Welsh Board, apart from its Special Committee of Inquiry, had not formally approved of the proposal (which approval in effect would be tantamount to committing an act of suicide); but, after a short but animated discussion, it resolved to support the resolution. Replies had not been received from several Education Authorities, and the Board was therefore at one time doubtful whether it should adopt the resolution at the present meeting. The Cardiff representatives were strongly in favour of postponing action till after the War, but they received but little encouragement. The Special Committee of Inquiry had previously had an interview with the Education Committee of the Welsh representatives, and it was then agreed that a joint committee of the members and of the Central Welsh Board should summon a general conference to discuss draft resolutions based on Sir D. Brynmor Jones's Bill, and the Central Welsh Board now approved of the convening of this conference.

At a subsequent meeting of the Welsh members, the action of its Education Committee has been upset, and we are informed in the Press that the majority of the members will have no share in convening this Conference, or associate themselves with the Central Welsh Board in any steps it may take towards joining a National Council.

A small sub-committee has been formed to prepare heads of evidence before the Royal Commission on University Education.

The number of pupils attending the intermediate schools during the year 1915-6 was 7,318 boys and 8,782 girls—a total of 16,100, which represents an increase of 898 on the figures for the previous year. The average salary for assistant masters is £157. 15s. 2d., and for assistant mistresses £127. 4s. 4d., and it is therefore no wonder that Mr. W. Edwards, the Chief Inspector, in his Annual Report, declares that the teachers in Wales are inadequately paid. It is really to a great extent a waste of time to discuss "education after the war," unless this most vital question affecting progress is grappled with in real earnest. From the Board's Report we also learn that 89 pupils passed the Honours, 180 the Higher, 1,360 the Senior, and 1,879 the Junior Certificate Examination, and that the total number of exercises sent in was 52,008. The most popular subject at the Annual Examination was English Language and Literature.

Considerable progress has been made in forming an endowment fund for the College in view of its possible recognition as a constituent College of the University. Swansea Technical College. Several of the local firms have made generous contributions ranging from £2,000 to £10,000, and it is hoped that by December 1, when evidence is to be submitted to the Commission, a sum of £50,000 at least will be collected. It is generally believed that the claims of the College will be granted by the Commission.

The County Governors have passed a resolution that University education in Wales should be "free to all qualified to benefit by it." Attention has often been called in these notes to the financial difficulties of the colleges owing to insufficient endowments and the lowness of the fees. The total income of the three colleges from fees is only £18,000. From this sum £2,000 is to be deducted for scholarships, while the Board of Education pays £5,000 for the normal students in training, thus leaving only £11,000 to be raised by taxation—a very small sum for the Principality.

We much regret to record the death of Mr. W. Lewis, M.A., Head Master of Llanelli County School, after a long illness. Mr. Lewis had successively occupied the position of Hon. Secretary, Treasurer, and President of the Welsh County Schools Association. He was

one of the most active educationists in Wales, and on the Central Welsh Board and on the platform he expressed his views with incisiveness and force.

SCOTLAND.

The students have unanimously elected Sir Douglas Haig to be Lord Rector of the University in succession to the Marquis of Aberdeen. Sir Douglas Haig is a native of Fifeshire, and received part of his education at Clifton Bank School, St. Andrews. The new Lord Rector has appointed Mr. William Low, of Blebo, to be his assessor on the University Court. Miss Doris L. Mackinnon, D.Sc., assistant to the Professor of Natural History in University College, Dundee, has been appointed a University Lecturer in that subject. Prof. J. Arthur Thomson, Aberdeen University, is delivering his second course of Gifford Lectures. His subject is "A Study of Animate Nature."

Dr. John Ferguson, Emeritus Professor of Chemistry in the University, died on November 2. He was in his eightieth year, and his connexion with the University, as student, assistant, and professor, extended over more than sixty years. About a year ago he retired from his chair, which he had occupied for forty-one years. He had an unrivalled knowledge of early and medieval science. He made important contributions to bibliography, and he formed a very valuable library of rare books. His chief publication was his *Bibliotheca Chemica*, and he was the author of a book on witchcraft as well as many articles in periodicals. He was an impressive figure in University ceremonials, and his courteous and genial personality will be greatly missed.

The University Court has approved of the institution of University lectureships in Electrical Diagnosis and Therapeutics at the Royal and Western Infirmarys. The stipends of the lecturers are provided by the Merchants' House of Glasgow. The General Council, at its autumn meeting, gave a general approval to the draft Ordinance instituting a degree of Bachelor of Education, on similar lines to the new degree of Edinburgh University. The Edinburgh and Glasgow ordinances are, in their final form, the result of a general agreement between the two Universities, though there are considerable differences in detail. The Council also approved generally the draft Ordinance instituting a Chair of Ophthalmology, in connexion with the Western Infirmary. The endowment, bequeathed by the late Dr. Gavin P. Tennent, amounts to about £40,000. The chair is intended for post-graduate teaching. The salary of the Professor will be £500 a year, and the election will be made by a Board of seven Curators, representing the University Court and the Western Infirmary. Suitable buildings for the work of the chair are to be erected at the Infirmary at a cost of not less than £17,500. For the first time in the history of the Scottish Universities provision is made in the Ordinance that the Professor must retire on the completion of his sixty-fifth year. All appointments hitherto have been *ad vitam aut culpam*, and the new provision has been made in view of the rule of the Infirmary, which prescribes retirement at sixty-five.

The number of matriculated men students in the first term of the session is 755. Of these 447 are in the Medical Faculty, 141 in Arts, 124 in Science, 23 in Law, and 20 in Theology. The total number is 300 less than the number at the same time last year. The number of matriculated women students is 705, as against 637 last session. Of these 394 are in the Faculty of Arts, and 265 in that of Medicine. There is a reduction in the number of women students in Arts, and a large increase in Medicine. In 1913-14 there were 92 women medical students; but this year there are 265, of whom 102 are first-year students.

It has been resolved, as a tribute to the memory of Earl Kitchener, the late Lord Rector of the University, to postpone the election of a successor until this time next year, when his term of office would have expired. The University Court has issued a draft Ordinance for the foundation of a Chair of Tuberculosis, and the General Council at its autumn meeting approved the Ordinance. The Council also appointed a Committee to inquire into the question of providing a chapel for the University, and it remitted to its Committees to take into consideration and to report on the development of the University after the War in the following, among other, directions:—Finance, research, relation to the Universities of the Allies, relation to outside institutions, establishment of new degrees and conditions for the taking of degrees, training in social service, &c. A series of lectures on Imperial Studies is being given this winter at the University under the auspices of the Imperial Studies Committee of the Royal Colonial Institute and the Senatus.

Two important deputations on this subject have been received by

Educational Reform.

the Secretary for Scotland. The first deputation, consisting of representatives of the Educational Institute, the Secondary Education Association, and the Class Teachers' Association, urged the appointment of a Special Committee on Educational Reform in Scotland, the extension of administrative areas, entrusting the administration of education to County Councils, payment of salaries by the Treasury on a national scale, increase of salaries during the War, and raising the compulsory school age to fifteen. The Secretary for Scotland thought that the extension of areas was desirable, and as regards a War bonus as an addition to salaries, he promised that, if School Boards approached the Department with a view to granting such a concession, he would place the proposal before the Treasury and see whether they would sanction a contribution to such a bonus. He was surprised at the sudden desire of the teachers to do away with the *ad hoc* body for educational administration, and was clearly sceptical about the proposed County Council plan. On the other points his reply was politely negative.

The second deputation represented the Scottish School Boards Association. It advocated the retention of the *ad hoc* Authority, a War bonus for teachers (to be paid partly by the Local Authorities and partly by a substantial grant from the Treasury), and the institution of a Consultative and Advisory Educational Council for Scotland, representing all educational interests from the Universities to the primary schools. The Secretary for Scotland was inclined to be in favour of the retention of the *ad hoc* Authority; he had great sympathy with the demand for a War bonus, but insisted on the necessity of finding a large part of the money from the rates, and he threw cold water on the proposal of an Educational Council. The net result seems to be that the *ad hoc* Authority will be retained with possibly some extension of areas, and the teachers will probably get their War bonus. It is not a large concession, but it may be that after the War further pressure may extract something more. It is noteworthy that the War bonus and the salaries question in general are the most frequent subjects of discussion at the meetings of teachers' associations. Some School Boards are granting a bonus and most of them are in favour of it in principle, but in the meantime the smaller Boards are leaving the question to be dealt with by the School Boards Association or waiting to follow the lead of the larger Boards.

IRELAND.

At the opening meeting of the Dublin University Biological Association, held on the evening of November 18, Dr. William Boxwell, the President-elect, gave an address, in which he dealt with the decline in reputation and achievements of the Dublin School of Medicine, and attributed it to two main causes—"the besetting sin of Irishmen of dwelling for ever on the glories of the past," and the lack of funds. Owing to the latter cause, no work had been done in human bacteriology for long past in Dublin. Prof. Lindsay, M.D., of Belfast, who spoke on the paper, took a more optimistic view of things, and mentioned that in the Belfast medical school there were 342 students, of whom 77 were women.

At the last meeting of the Senate of the National University, those professors whose tenure under the first University Statutes was about to expire were reappointed till they should have attained the age of sixty-five, and lecturers were reappointed for another term of seven years. The Chair of Early and Medieval Irish History, hitherto filled by Prof. John MacNeill, remains *in statu quo*, Mr. MacNeill having neither been formally reappointed nor the office declared vacant; in the meantime its duties are being performed by Dr. R. Macalister, Professor of Celtic Archaeology.

On November 2, in the House of Commons, Mr. Boland called attention to a new regulation made by the Intermediate Board and destined to come into operation in June, 1917, by which students will be required to pass a written examination in experimental science. Hitherto, the science teaching in secondary schools has been entrusted to the supervision of the Department of Agriculture and Technical Instruction, who have pursued a system of inspection only. Mr. Boland's complaint was that the change had been made without due notice or consultation with the Department and Educational Authorities, and that it was likely to check the continuous outflow of pupils passing straight from the schools to engineering factories or shops. Mr. Duke upheld the action of the Board as being based on reason and experience and could not promise that the Government would interfere.

The claim of women National teachers for equal treatment with

WILLIAM HEINEMANN, 21 Bedford Street, London, W.C.

Primary Education.

men in respect of the War bonus, which has been vigorously supported by various public bodies throughout the country and by the Nationalist members of Parliament, has at last been acknowledged, as appears from an answer made by Mr. McKenna to Mr. Hugh Law in the House on November 15. Mr. McKenna finds that the position of women teachers in Ireland is such as to justify the payment to them of the bonus on the same rates as to men.

At the Annual Meeting of the Church of Ireland Training College in Dublin, the report submitted by the Principal, Rev. Kingsmill Moore, drew attention to a threatened shortage of teachers. Of recent years the demand has been outgrowing the supply, and, as a result of the last examination of candidates for training, ten vacancies for women students were left unfilled, involving incidentally a serious financial loss to the College.

During the month the Commissioners of National Education have issued their report for the school year, 1914-15, its delay being due to the fact that the previous report for 1913-14, which was submitted to the Irish Government in September, 1914, for presentation to Parliament, has so far been withheld from publication. The present report is brief, the usual statistical appendixes being omitted. The work of the Board has been hampered financially owing to the War. All grants of loans for the building and improvement of schools and teachers' residences have been suspended, except in cases where contracts had already been entered into. Various proposals of reform submitted to the Government before the outbreak of the War, including a new scale of salaries for teachers with annual increments instead of the present triennial increases, and also the appointment of four Divisional Inspectors, have not received Treasury sanction. Other reforms which did not require that sanction have been effected, and are duly set forth. One hundred and one school gardens were sanctioned during the year 1914-15, and horticultural instruction is now given in the De la Salle and Marlborough Street Training Colleges, besides the horticultural courses for teachers held by the Department in Dublin. The Provision of Meals Act of 1914, providing for the feeding of necessitous pupils, has been carried into effect in the County Boroughs of Cork and Dublin and some other Urban Districts. In the financial year ending March 31, 1915, grants amounting to £801 were paid to local parties for the provision of dental clinics, a sum far short of what the Board could afford were the scheme of dental inspection generally taken up; the condition of such grants is that half the expense must be defrayed locally. The Higher Grade Certificate, instituted about three years ago, has now been granted to thirty-three teachers. About the same time a regulation was made admitting teachers of promise to a third year's course in one of the Training Colleges, to be carried on in connexion with a course of study in a University; in the past three sessions seventy-six men and three women teachers have successfully completed the course. The total expenditure on schools and teaching staffs for the year ending March 31, 1914, was, from State grants, £1,628,181, and from local sources £155,350. The average number of pupils on the rolls of all the schools for the year was 700,265; the percentage of average daily attendance to this number was 72.6, showing a slight rise on previous years.

PRIZE COMPETITIONS.

THE Translation Prize for November is awarded to "Otranto."

The winner of the Translation Prize for September is Edward Latham, Esq., 61 Friends Road, Croydon.

Quatre-vingt-quatorze sonnait à l'horloge du dix-huitième siècle, quatre-vingt-quatorze, dont chaque minute fut sanglante et enflammée. L'an de terreur frappait horriblement et lentement au gré de la terre et du ciel, qui l'écoutaient en silence. On aurait dit qu'une puissance, insaisissable comme un fantôme, passait et repassait parmi les hommes, tant leurs visages étaient pâles, leurs yeux égarés, leurs têtes ramassées entre leurs épaules, repliées comme pour les cacher et les défendre. Cependant un caractère de grandeur et de gravité sombre était empreint sur tous ces fronts menacés et jusque sur la face des enfants; c'était comme ce masque sublime que nous met la mort. Alors les hommes s'écartaient les uns des autres, ou s'abordaient brusquement comme des combattants. Leur salut ressemblait à une attaque, leur bonjour à

Forsyth Bros., Deansgate, Manchester.

X School Transfers and Partnerships are on pages 691, 727, and 728; other School and Teachers' Advertisements are continued on pages 725, 727, 728, 729, 730, 731, 732, 733, 734, and 735. X

une injure, leur sourire à une convulsion, leur habillement aux baillons d'un mendiant, leur coiffure à une guenille trempée dans le sang, leurs réunions à des émeutes, leurs familles à des repaires d'animaux mauvais et défilants, leur éloquence aux cris des halles, leurs amours aux orgies bohémiennes, leurs cérémonies publiques à de vieilles tragédies romaines manquées, sur des tréteaux de province; leurs guerres à des migrations de peuples sauvages et misérables, les noms du temps à des parodies poissardes.

Mais tout cela était grand, parce que, dans la cohue républicaine, si tout homme jouait au pouvoir, tout homme du moins jetait sa tête au jeu.

By "OTRANTO."

Ninety-four! The great clock of the eighteenth century was striking ninety-four—whose every minute was smirched with blood and flame. Awful and slow were the strokes that announced the year of terror, and earth and heaven listened in silence and gave consent. It was as though some power, mysterious as a phantom, were passing to and fro among men, so pale was every face, so wild each eye, so sunken every head between shoulders that seemed raised for its concealment or protection. Yet all these threatened brows—yea, the very faces of the children—bore an impress of grandeur and sombre dignity, just as the immobility of the features of the dead is in itself sublime. In those days men shunned one another or hailed one another with the scant ceremony which preludes a fight. Their bows were aggressive, their greetings insolent, their smiles constrained; they were clad, like mendicants, in tatters, and wore on their heads what seemed a blood-stained rag; their gatherings were like mob-riots, their houses the dens of noxious and suspicious beasts; for eloquence they imitated the cries of hawkers in the market place, and wooed and loved like travelling gypsies; their public ceremonies were what the tragic plays of old Rome may have been when murdered by provincial strollers; their wars were like the migrations of wild and starving tribes; the very names they bore were surely fishwives' travesties. Yet there was a grandeur about it all, for, though in this social upheaval every man was gambling for power, yet every man was staking his head upon success.

No one quite hit the happy mean between a translation and

a word-for-word rendering. Thus in the first sentence: "The great clock of the eighteenth century" is a false note to an English ear. "Ninety-four! Slowly, awfully, stroke upon stroke, tolled the knell of the eighteenth century. Ninety-four! the Year of Terror, each minute stained by blood and fire, the earth and heavens listening and assenting." On the other hand, there is no reason for not translating literally *ce masque sublime. Ramassées*: "hunched." *Brusquement*: "Cavalierly like duellists." *Une injure*: "an insult." *Une convulsion*: "a contortion." *Des repaires, &c.*: "dens of snarling beasts of prey." *Bohémiennes* is not "gipsy," and *manquées* was generally misrendered. Read "exploded classical tragedies as played by strolling actors."

We classify the 67 versions received as follows:—

First Class.—Otranto, M.M.T., L'Espagnol, Emile, Moxum, Novice, *ovdeis*, Westminster, Yod, Ventôse, P.O.L., Evariste.

Second Class.—Accinctus, Che Faro, N.H., Decima, Fidelio, Vignette, Bouledogue, Disraeli, Dane, S.F., Sperans, Pierre, Chingleput, Erigena, Haworth, Lesbia, Pallas Athene, Digs, Gothicus, Jean qui pleure, Johnny, E.T., D.B., Venus, Boetius, F. Simpson, Cunctator, Trix, Eugène, Opaline, Felicia, M.K.H., M.O.W., W.O.C., M.C.H., L.R.O., C. Platts, Fidelia, Sirach, Nairie, Cloutier, Robin, Soufflet, A. M. Baines, E.M.C., Tricolore, Croesus, Y. M. D. Cooper, Nutcracker, H.G., U.C.R., Ajax, Tantalus, Jeamar, Eve, E.F.W., Gazeley, Anna Maria, Madeleine Descartes, Pax, Pruth, K.E.M.D., M.S., Rursus, B.G.C., W., Millicent, M.W.M., Erol, Rostra, Garnel, E.A.S.

Third Class.—A.F., Clairinck, Farmer Giles, L.M.M., Moriendo Vivo, Sandbourne, Penguin, A.G.H.D., Licnep, W.H.S., E.C.W., Sparrow, Hint, P.J.E., C.D., E.J.S.H., Ichabod, H.G.C., Lyndsaye, Iota, B.E.S., Persistens, Nitor in adversum, Tiglath Pileser, Ex Humilibus Excelsior, Le Tigre, T. G. Wells, Nil Desperandum, Ypey, Benoni, E.P., Poppel, L.W.L., Cecil, Mayfield, Laurel, D.W.R., E.M.D.

Fourth Class.—Awelon, Stella Cressingham, Georgie Miles, Opal, K.E.F.

450 MEDALS AND PRIZES!!!

STUDENT'S ELEMENTARY BOOK-KEEPING

By ARTHUR FIELDHOUSE, Accountant,
66 West Parade, Huddersfield,

who will forward copy Index and Specimen Pages on receipt of
Post Card addressed to P.O. Box A 27, Huddersfield.

364 Pages. 21st Edition. Price 2/-.
100 Exercises. 350 Questions.

Teacher's Specimen Copy, from Author only, 1/4.

The ONLY TEXTBOOK to which there is a FULL KEY.

While this textbook more than covers all Elementary Examinations in this subject, its special design is to meet the requirements of the excellent Syllabuses issued by the Royal Society of Arts, the College of Preceptors, Oxford and Cambridge Locals, the London Chamber of Commerce, and the National Union of Teachers.

The exercises and the principles introduced therein are so carefully graded in point of difficulty that the student is trained to work the most difficult set of transactions without being appalled at any stage of his study. No exercise is too long or too complicated to be completed between each lesson. The Questions will be found very useful for testing the student's knowledge at each stage of his work. Examination Papers of the Society of Arts, the W.R.C.C., College of Preceptors, the Oxford and Cambridge Locals, and the L.C.C., are included.

LONDON: SIMPKIN, MARSHALL, HAMILTON, KENT, & CO., LTD.

THE STUDENT'S BUSINESS METHODS and Commercial Correspondence.

By ARTHUR FIELDHOUSE, Accountant,
66 West Parade, Huddersfield,

who will forward Specimen Pages and Index on receipt of Post Card
addressed to P.O. Box A 27, Huddersfield.

Eighth Edition. 380 Pages.
Price 2/6.

80 TEST and EXAMINATION PAPERS, containing
1,300 QUESTIONS.

This is the only practical, up-to-date book on Commercial Correspondence and Office Work, and is characterized by the same qualities that have made the author's other textbooks so popular. The lessons are well graduated, and the teacher is saved the drudgery of preparing Test Papers, one of which follows every chapter, in addition to numerous Examination Papers. PRACTICAL work is provided in the Series of Business Transactions included in some of the Test Papers. It is the only Complete Guide, covering all the Elementary Examinations. Small-priced books may be had on the subject, but as they do not cover the Syllabuses they are dear at a gift. Efficiency should be the first consideration. It is an excellent Handbook for the Junior in the Office. Teacher's Specimen, from Author only, 1/6 post free.

LONDON: SIMPKIN, MARSHALL, HAMILTON, KENT, & CO., LTD.

BOOKS FOR PRIZES AND SCHOOL LIBRARIES

A SPECIAL OFFER

A Prize of Two Guineas is offered for the best translation of the following extract from Romain Rolland :—

Un soir que Melchior dînait en ville, Gottfried, resté seul dans la salle du bas, tandis que Louisa couchait les deux petits, sortit, et alla s'asseoir à quelques pas de la maison, au bord du fleuve. Christophe l'y suivit par désœuvrement ; et, comme d'habitude, il le persécuta de ses agaceries de jeune chien, jusqu'à ce qu'il fût essoufflé et se laissât rouler sur l'herbe à ses pieds. Couché sur le ventre, il s'enfonça le nez dans le gazon. Quand il eut repris haleine, il chercha quelque nouvelle sottise à dire ; et, l'ayant trouvée, il la cria, en se tordant de rire, la figure toujours enfouie en terre. Rien ne lui répondit. Étonné de ce silence, il leva la tête, et s'apprêta à redire son bon mot. Son regard rencontra le visage de Gottfried, éclairé par les dernières lueurs du jour qui s'éteignait, dans les vapeurs dorées. Sa phrase lui resta dans la gorge. Gottfried souriait, les yeux à demi fermés, la bouche entr'ouverte ; et sa figure souffreteuse était d'une tristesse et d'un sérieux indicibles. Christophe, appuyé sur les coudes, se mit à l'observer. La nuit venait ; la figure de Gottfried s'effaçait peu à peu. Le silence régnait. Christophe fut pris à son tour par les impressions mystérieuses, qui se reflétaient sur le visage de Gottfried. Il tomba dans une vague torpeur. La terre était dans l'ombre, et le ciel était clair : les étoiles naissaient. Les petites vagues du fleuve clapotaient sur la rive. L'enfant s'engourdissait ; il machait, sans les voir, de petites tiges d'herbes. Un grillon criait près de lui. Il lui semblait qu'il allait s'endormir. — Brusquement, dans l'obscurité, Gottfried chanta. Il chantait d'une voix faible, voilée, comme intérieure ; on n'aurait pu l'entendre à vingt pas. Mais il y avait en elle une sincérité émouvante ; on eût dit qu'il pensait tout haut, et qu'au travers de cette musique, comme d'une eau transparente, on pût lire jusqu'au fond de son cœur. Jamais Christophe n'avait entendu chanter ainsi. Et jamais il n'avait entendu une pareille chanson. Lente, simple, enfantine, elle allait d'un pas grave, triste, un peu monotone, sans se presser jamais, — avec de longs silences, — puis se remettait en route, insoucieuse d'arriver, et se perdant dans la nuit. Elle semblait venir de très loin, et allait on ne sait où. Sa sérénité était pleine de trouble ; et, sous sa paix apparente, dormait une angoisse séculaire. Christophe ne respirait plus, il n'osait faire un mouvement, il était tout froid d'émotion.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners will be required to send real names for publication.

All competitions must reach the Office by December 15, addressed "Prize Editor," THE JOURNAL OF EDUCATION, 3 Broadway, Ludgate Hill, E.C.

How peculiar are the likes and dislikes of Prize Editors ! This not infrequent remark of competitors is confirmed by the observation of a contemporary famous for its prize translations. The following lines from a hymn by Johann Heermann, written by Sir David Beatty in a lady's album, sold a week or two ago for the Kitchener Memorial Fund, were quoted :

"Grant that with zeal and skill this day I do
What me to do behoves, what Thou commandest me to do ;
Grant that I do it sharp, at point of moment fit,
And when I do it grant me good success in it."

And this version of an unknown translator (afterwards identified as Carlyle) was preferred to Miss Winkworth's in the *Lyra Germanica* :

"And grant me, Lord, to do,
With ready heart and willing,
Whate'er Thou shalt command,
My calling here fulfilling,
And do it when I ought
With all my strength, and bless
The work I thus have wrought,
For Thou must give success."

To enable its readers to decide between the two, the German original was given :

"Gieb, dass ich thu mit Fleiss,
Was mir zu thun gebühret,
Wozu mich dein Befehl
In meinem Stande führet ;
Gieb, dass ich's thue bald
Zu der Zeit, da ich soll ;
Und wann ich's thu, so gieb
Dass es geräthe wohl."

DUSMO
The Dustless Sweeping Powder

WHY NOT HAVE A CLEAN BILL OF HEALTH ?

DUST in your **SCHOOL** is the **CARRIER** of **DISEASE** which may **ATTACK** those least able to resist it. You can **REMOVE** this **DANGER** by the use of **DUSMO** when sweeping.

A line of **DUSMO** laid down and swept before the broom will prevent dust rising, and so dry scour the floor as to render wet scrubbing an unnecessary expense, thus effecting

A GREAT ECONOMY IN YOUR CLEANING BILL.

Copy of Letter recently received from a well known College :—

"We have completed a period during which **DUSMO** has been severely tested, and I am now convinced of its efficacy, although I was at first sceptical as to its merits. You will need no better testimonial than the accompanying order for six more bags."

DUSMO Co., Ltd., West Ham Lane,
Tel.: Stratford 99. Stratford, London, E.

The Times.—"A sensible, clearly told book intended for the use of middle forms in schools, as an introduction to the history of the nineteenth century in Europe."

THE ENGLISH COUNTRY GENTLEMAN IN LITERATURE.

By **G. N. POCKOCK, M.A.**, Royal Naval College, Dartmouth. **1s.**

A sketch of the character of the country gentleman as represented in English literature, beginning with Chaucer's Franklyn and tracing the development through the Stuart period and the eighteenth century, when the country gentleman figured so largely in the writings of essayists, novelists, and dramatists, down to the nineteenth century, and the writings of Dickens and George Eliot. The text takes the form of extracts from standard writers, with introduction and running commentary by the editor.

A JUNIOR CHEMISTRY.

By **W. WILLINGS, B.Sc.**, Senior Science Master, Municipal Secondary School, Brighton. **2s. 6d.**

A course dealing mainly with the experimental facts of Chemistry: it covers the syllabuses of the Oxford and Cambridge Junior Local Examinations, and a large number of questions set at these examinations will be found at the end of every chapter.

ELEMENTARY CHEMISTRY for RURAL SECONDARY SCHOOLS and AGRICULTURAL COLLEGES.

By **ERNEST JONES, M.Sc.**, Science Master at the Aberystwyth County School, and **J. JONES GRIFFITH, B.Sc.**, Lecturer in Agricultural Chemistry at the University College of Wales, Aberystwyth. **2s. 6d.** net.

Choosing its examples from the farm, the garden, and the dairy, this book provides a sufficient knowledge of the principles of chemistry to enable students to proceed to an intelligent study of agricultural chemistry.

AS PROPHET, MAN OF LETTERS, KING. From *Heroes and Hero Worship*. Cloth limp. **1s.**

Messrs. BLACKIE & SON will be pleased to send full Lists of Books suitable for Oxford and Cambridge Local Examinations, 1917, post free on application.

BLACKIE & SON, LTD., 50 OLD BAILEY, LONDON.
GLASGOW AND BOMBAY.

916.

Modern Language Supplement to
THE JOURNAL OF EDUCATION.

No. 569.

DECEMBER 1, 1916.

"IT IS CLEAR

that a capable agent who has pursued his calling for years will have gathered, by visits, by personal interviews, and by correspondence, a globe of precepts, and that his profession of recommending schools is no idle pretence."

The Journal of Education, June, 1916.

This is the definition, by a competent judge, of what should constitute a
USEFUL SCHOLASTIC AGENT.

It may be presumed that no one would knowingly make trial of the services of any other kind, but it is still true that a proportion of Principals are induced to yield to the importunities of plausible and worthless concerns, with the resultant loss and disappointment that might be expected. This is a disillusioning experience for which there is no necessity. The established, reliable Scholastic Agencies are not many in number, and they are well known, and their record and standing easily to be ascertained. As one of these we have a sufficient claim to clients' confidence. If, further, we obtain the greater share of Parents' Inquiries, we also take unusual pains to secure them. At present our advertisements are appearing in nearly 400 papers in this country alone; and, outside of enemy countries, the War has made no difference in the circulation of our List of Schools.

As a result, few days pass without at least one letter of thanks from parents who appreciate the assistance we have given them. Principals are equally generous in expressing their indebtedness, as this recent acknowledgment, amongst others, testifies:—

September 20, 1916.

"Gentlemen,—Our term has just commenced, and I feel I must write to thank you for your help in extending my Boarding Connection. I am most grateful. To-day we scored another success. Mr. H. of B. came over to see the place, and had no hesitation in deciding to send his boy to us. He joins us next Monday. I knew from his conversation that your recommendation had been the deciding factor. The Nottingham boy came on Saturday; this, too, is due to your agency. H. and R. are both with us. Owing to your splendid work, I have opened a new dormitory this term—a beautiful room; it took Mr. H.'s fancy at once. At present, of course, it is not half full, but I have no fears for the future, having unbounded confidence in you."

If you have not yet made trial of our services, we shall be glad to hear from you, with particulars of your School.

J. & J. PATON, Educational Agents,
143 CANNON STREET, LONDON, E.C. Telephone: Central 5053.

[See also Back Page of this Supplement.]

DENT'S FRENCH BOOKS.

A NEW FRENCH COURSE BY Mr. WALTER RIPPMMANN.

FIRST STEPS IN FRENCH.

Crown 8vo. Cloth. 2s.

This book is admirably illustrated by Mr. FRED TAYLOR, most of the Pictures being based upon a set of **Four New WALL PICTURES**, two of which represent indoor scenes, one a street scene, and one a country scene.

The first part of the book is also issued in the **PHONETIC TRANSCRIPTION**, separately at **6d.** net, and a *Teachers' Handbook*, "THE EARLY TEACHING OF FRENCH," price **1s. 6d.** net, contains a full commentary on each lesson.

The four **WALL PICTURES** are printed in colours on tough paper. Price **4s.** net the set.

The attention of Teachers is specially drawn to the following features:

1. The relatively large amount of reading matter.
2. The care with which new words are introduced so that their meaning becomes clear from the context or from illustrations.
3. The copious and varied reform exercises, the gradual classification of grammatical features in the "Cahier de Grammaire" and grouping of words in the "Cahier de Vocabulaire."
4. The building up in sections of the four wall pictures.
5. The novel method of indicating breath-groups, where the punctuation does not suffice for the purpose.

FURTHER STEPS IN FRENCH.

Crown 8vo. Cloth. 2s.

This book forms the sequel to "First Steps in French," and provides a second year's course.

SCHOOL WORLD.—"Like its predecessor ('First Steps in French'), it is written entirely on direct method lines, and represents the very best and most thorough application of that method to the teaching of French."

PREMIÈRE GRAMMAIRE FRANÇAISE.

By H. E. BERTHON, M.A., Taylorian Lecturer in French at the University of Oxford. 2s.

This French Grammar, in which the rules are clearly stated and made impressive by the careful arrangement of distinctive types, will be found to contain all that pupils are likely to require during the first three or four years of teaching. It is written entirely in French.

DENT'S FIRST EXERCISES IN FRENCH GRAMMAR.

By Miss F. M. S. BATCHELOR. 1s. 4d.

This book is for use with the "Première Grammaire Française," its object being to provide pupils with practice in the application of their grammatical knowledge.

DENT'S FURTHER EXERCISES IN FRENCH GRAMMAR.

By Miss F. M. S. BATCHELOR. 1s. 4d.

This second series of exercises in French grammar is intended for the use of upper forms. No rules are given: these will be found in the "Première Grammaire Française," in conjunction with which this book is intended to be used.

A FRENCH NOTEBOOK.

By C. E. HODGES, M.A. Fcap. 4to. 1s. 9d.

A skeleton notebook designed for a four years' course, and specially arranged for use in connexion with Berthon's "Première Grammaire Française." All the necessary and difficult points of accidence and syntax are clearly and amply provided for, examples are given in each case, and space is left for the pupil to write down similar ones occurring in his own experience.

FRENCH SONGS.

Compiled by VIOLET PARTINGTON. Crown 8vo. Limp Cloth, 6d. net.

The collection contains a number of French songs, attractive and not hackneyed, with airs and Tonic Sol-fa, the text being given both in the ordinary spelling and in phonetic transcription.

A FRENCH VERB EXERCISE BOOK.

By Miss C. F. SHEARSON, M.A. Crown 4to. Wrapper. 9d. net.

This exercise book has been subjected to trial in several important schools, and the results have been found most encouraging. It has proved a very valuable means of securing a knowledge of the French verbs.

THE BEST FRENCH PLAYS.

Plain Texts. Limp cloth. Each 3d. net.

1. **Sedaine: Le Philosophe sans le Savoir.**
2. **Musset: On ne saurait penser à tout.**
3. **Mme de Girardin: La Joie fait Peur.**
4. **Labiche: La Grammaire.**
5. **Labiche et Martin: Le Voyage de M. Perrichon.**
6. **Mariyvaux: Le Jeu de l'Amour et du Hasard.**

THE BEST FRENCH PROSE.

Plain Texts. Limp cloth. Each 3d. net.

1. **Le Coup de Pistolet: L'Enlèvement de la Redoute.** Par PROSPER MERIMÉE.
2. **Laurette, ou Le Cachet Rouge.** Par ALFRED DE VIGNY.
3. **La Jeune Sibérienne.** Par XAVIER DE MAISTRE.
4. **Le Serf.** Par EMILE SOUVESTRE.
5. **Le Dernier Abencérage.** Par CHATEAUBRIAND.
6. **L'Auberge Rouge.** Par H. DE BALZAC.

THE BEST FRENCH POETRY.

Plain Texts. Limp cloth. Each 3d. net.

1. **Petite Anthologie du Seizième Siècle.**
2. **Jean de la Fontaine. FABLES.**
3. **Lamartine. POÉSIES.**
4. **Victor Hugo. POÉSIES.**
5. **Alfred de Musset. POÉSIES.**
6. **Théophile Gautier. POÉSIES.**

DENT'S SHORT FRENCH READERS.

Each volume contains **Footnotes in French and Reform Exercises** on the text, while the Fourth Year Readers contain full references to books bearing on historical points, in place of historical notes.

SECOND YEAR READERS.

48 pp. Limp cloth. 4d. each.

Contes de Perrault. Vol. I.
" " " " Vol. II.
La Mule du Pape (and other Stories).
Yvon et Finette.
Poucinet.
Les Quatorze Saints.
Légendes Normandes.

64 pp. Limp cloth. 6d. each.

Le XIX^{me} Siècle.
Un Merle Blanc.
Télémaque.
La Révolution Française.
Le Bienvenu (Jean Valjean).
Louis XI et Charles le Téméraire.

J. M. DENT & SON, Ltd., 10-13 BEDFORD ST., W.C.

THE WORK OF THE GOVERNMENT COMMITTEE.

THE commission given by the Prime Minister to the Committee which he has appointed to review the teaching of modern languages was conceived in no illiberal spirit. They are charged, in studying the question, to have regard to "the requirements of a liberal education, including an appreciation of the history, literature, and civilization of other countries, and to the interests of commerce and public service." Here the broad educative purpose of modern languages is put in the foreground, and in the foreground we hope that the Committee will keep it. For the fundamental weakness of our modern language work is that we do not keep that aim sufficiently in view. The range of the work is not wide enough; the standard in some important branches is not high enough. The question has never been thought out: complete programs of study do not exist. One reason is that professors and school teachers are alike overwhelmed by the vastness of the material with which they have to deal. A thousand years of history, the literature of great nations for two or three hundred years, and thought—even if we confine it to ethics, politics, and social life, and exclude metaphysics—teachers may well despair of being able to reduce such a mass of matter to manageable dimensions. Yet there is no element here that we can afford to neglect altogether, if modern studies are to offer an education that can vie in all respects with the classics. Obviously, our primary business must be selection; and the first question that emerges is whether we should not do better to make our modern studies more strictly modern and less medieval in both schools and Universities. Some knowledge of the Middle Ages the student of the last four centuries of European history must clearly have, but need it be more than such an *aperçu* as will make this later history intelligible? The Government Committee, we are glad to see, contains more than one well known student of history, and we have no doubt that this point will receive full consideration.

An equally grave question is, how the more solid literature of foreign nations—the winged words of the moderns—can best be brought within the scope of school and University studies. French, to take the nearest example, was long taught as a social accomplishment, and is still taught as that and as a commercial asset. Where the study of the language is carried beyond that point it is concentrated chiefly on French imaginative and æsthetic literature, the brilliance, charm, and, it may be added, the intellectual value of which is such that the confinement of our attention to it is a pardonable sin. Yet surely this is to lose much. In studying French we should be studying the mind of the people which, amongst modern nations, has the acutest intelligence and the most original genius. Something of what the French have thought about religious, moral, political, and social questions must form part of any education by means of modern languages which aspires to the name of liberal. This is a question peculiarly for the Universities, and the broadening of the University curricula, which are at present far too medieval and philological, will no doubt be the subject of much discussion on the Committee. Another paper in this Supplement deals with the question so far as it concerns the preparation of the teacher; here we would put in a plea for a more liberal conception of modern studies as a preparation for the work, not only of the diplomatist and publicist, but also of all who have dealings with foreign countries or who desire to understand the modern world.

The provision for the teaching of foreign languages at the Universities will certainly engage the attention of the Committee. That provision is lamentably small. French and German are the only two languages for which even approximately adequate teaching staffs exist. We believe that it is scarcely an exaggeration to say that the instruction in foreign languages obtainable at Berlin alone is nearly equal to that which the combined Universities of the Empire could offer. It is, of course, unnecessary that every University

should offer courses in every language likely to be needed by any Englishman; the languages may be parcelled out amongst the Universities as the applied sciences already are, one concentrating its efforts on Asiatic tongues, another on Slavonic languages, and so forth. The problem of selection will not be very difficult for Universities, but for schools it will be more complicated. Circumstances, indeed, have decided that French will for generations have pride of place in English education, but what language is to come second? We would urge that there is no good reason for turning German out of the position which it occupies at present. To the humanist German is the key to the literature which in importance to the modern world is second only to that of France; to the statesman German is the language of our most formidable enemy and rival, and its study therefore an imperious necessity; to the business man German is one of the three or four languages most widely needed for commercial purposes. German offers a better combination of the intellectually stimulating and the practically useful than any other of the competing tongues. To some Italian literature may be more attractive, but that is a matter of personal taste, and few will contend that the life and polity of Italy are better worth knowing than those of Germany. Spanish and Russian may be more useful as commercial languages, though that is far from certain; but Spanish literature cannot rank with French and German, and, while Russia may have a great future before her, we cannot teach the future in schools.

It will surely be the business of the Government Committee to consider what are the elements in modern studies which are of greatest permanent value. If those studies are to have a fixed and honoured place in our educational system, they must not be the sport of every gust of international feeling. Classics march on their stately way, unmoved by wars and revolution; what in them is of abiding worth has long been recognized; and if the Greek armies were to attack the allies in the rear, or were to deluge Athens with blood, Sophocles would not lose one admirer, nor Plato one reader. If modern studies are to do for future generations what classical studies have done for us and our fathers, we must find out what in them is of highest and most enduring worth, and cleave to that, whether the nations to which it belongs are friend or foe, and whether they behave well or ill.

Russian and Spanish must be content, at least in the main, with a place in special schools. It may be noted that the Germans—who, if not the best linguists, are probably the greatest language-learners in Europe—do not teach a multiplicity of tongues to their children. If Russia, Spain, and Italy have in recent years been flooded by Germans speaking the native idiom, this is not because the languages are taught in German schools. Except here and there, the only languages studied in the classrooms of the Fatherland are French and English. Education first, vocational training afterwards, has always been the German maxim. The introduction of new languages into our schools would certainly mean dispersion of energy and money and dissipation of aim. Staff would be lacking, and for some years at least we should have to rely upon teachers imported from abroad. All past experience shows that this would result in much bad work, and the greatest need of modern studies is not the teaching of this or that language, but the teaching with thoroughness and efficiency of whatever is taught. The curse of modern language teaching in the past has been shoddiness and amateurishness, and we must beware of perpetuating it. The modern language master must everywhere be on a level with the rest of the staff. If Russian and Spanish are to be admitted into our curricula, it should only be under conditions that will ensure the work possessing a real educative value. Efficient teachers, preferably British full-time members of the staff, must be provided; the classes should be of a substantial size, so that there may be no waste of force; a course of at least four years must be planned and taken by most of the learners; and the language chosen must be taught for general purposes, and not with a merely commercial aim. If these conditions are fulfilled, Spanish or Russian might be an alternative to German on the modern side of some very large schools, or one or other

might be taught as a substitute for German in one of the secondary schools in a large town which possesses several schools of the same type, and where local conditions are favourable to one of the supplementary languages. For the most part, however, we should look to technical and commercial colleges and institutes to provide language teaching for business purposes.

That efficient teachers should be provided should, we have said, be the first condition of the admission of a new language into a school curriculum. It is, indeed, the first condition of efficient teaching in any language or any subject, and the Committee will have no harder nut to crack than the question of supply of teachers. The nation has reached the point of demanding competent British teachers, but not the point of providing them. Of the expensiveness of the preparation of a teacher of foreign tongues we said something in our last number, and we need not repeat it here. It is enough to say that the pecuniary prospects of the school master or mistress are ludicrously out of proportion to the capital sum required to educate him for his profession. For modern language masters, too, the professional outlook is not much better than the financial outlook. Amongst head masters of the first rank only one has any claim to be considered a modern language scholar. Among the general body of twelve hundred or so there are very few who have won their spurs as teachers of languages.

The world still frowns upon the language usher, almost as much as when he was "a lean French exile, lame and slow, With monstrous snuff-box." And, to diverge from the point for a moment, the Civil Service Commissioners frown equally upon the modern language scholar. A glance at the table of marks gained by the successful candidates in an examination for appointments in Division I will show that there are two roads to success—the classical road and the mathematical and scientific—and that to the student of the modern humanities the way is blocked. Upon the British scholar, too, the Universities have frowned and have been slow to admit that he is worthy of a professor's chair. But that subject is so thoroughly dealt with in the report of the Modern Language Association, which we are printing in full, that there is no need to deal with it here. We will only express our conviction that there can be no satisfactory solution of the modern language question unless we are prepared to stand entirely upon our own legs and make these languages British studies carried on by British teachers. Until that point is reached they will remain more or less exotics.

We began this article by considering what modern studies should be at their best and highest; we may end it by discussing some humble aspects of the problem. A full program of modern humanistic education—by which we mean the systematic study of the language and literature, history and life of two foreign countries in addition to our own—will be possible only for schools where the leaving age is not less than eighteen, and even in them only if in the upper forms at least they form the main bulk and body of the curriculum. The inclusion of Latin, for instance, in the work of some modern sides can hardly be defended, and interferes with the homogeneity of the *Lehrplan*. But in schools with a lower leaving age than eighteen we must be content with a more modest menu. If one foreign language is acquired and some acquaintance with the life and literature of the people who speak it is gained, and the second language is well taught for purely practical purposes, it is as much as we can expect.

Many schools will certainly do much better by concentrating their energies on one language, and aiming at only a modest standard in the second, than by spreading their teaching out thinly over two tongues. Nor must English be forgotten. We hope to read a good deal about English in the Report of the Committee. Far more may be done with English writers than is done at present when, in most schools, Shakespeare, and one or two other poets, are the only authors read. In the ample library of English books there are works on every subject, and, whatever we think a boy or girl ought to know about the world in which he is to live, information on that topic can be found in English literature. Schools in which English studies form the backbone of the curriculum

and foreign tongues are only the ribs is certainly a possibility of the future.

MODERN LANGUAGE ASSOCIATION.

REPORT OF THE COMMITTEE ON UNIVERSITY APPOINTMENTS.

ON June 28, 1913, the Executive Committee of the Modern Language Association appointed a sub-Committee with the following terms of reference:—"To investigate the facts and report on the question of University Appointments in Modern Languages." To which was added the following instruction:—"To consider the question from the point of view of the relation between Schools and Universities."

The Report is signed by all but one of the Committee as finally constituted.

The Committee resolved, (1) to invite teachers in Universities and schools, and other persons interested in the question, to give their views; and (2) with this object to issue a *Questionnaire* to members of the Arts Faculties of the Universities, and to teachers generally throughout the country.

Nearly three hundred answers to the *Questionnaire* were received, of which seventy-seven were from the Universities, and twenty-three witnesses attended to give evidence before the Committee.

Taken generally, the answers from University circles fall into three categories: (1) those from University teachers of Modern Languages of British birth; (2) those from University teachers of foreign birth; and (3) from others—Principals, Heads of Institutions, teachers of subjects other than Modern Languages. In the case of Groups (1) and (2) there is, as was hardly to be avoided, a certain admixture of *pro domo* argument; while one notes with surprise on the part of some teachers of other subjects a curious survival of the tendency to regard Modern Languages as belonging to a lower plane of academic study than their own subjects. The answers from the schools have shown much less marked divergencies.

Questions (1) and (2), bearing on the encouragement of British scholarship, are very generally answered in the affirmative. It was unanimously felt that British students and scholars ought not to be discouraged from taking up the study of Modern Languages with a view to becoming University teachers, and that any unfair weighting of the scales against British candidates for such posts must necessarily act as a deterrent. On the other hand, considerable divergence of opinion exists as to the alleged detrimental effect on the general study of Modern Languages at the Universities by placing the work in the hands of foreigners. Those who consider it an advantage to the ordinary student to have a foreign teacher naturally regard the discouragement of the British aspirant to a professorship as of negligible importance; as one answer has put it, "Not one in twenty thousand Modern Language students has any intention of becoming a University Professor of his subject."

Question (3), referring to the character of a Modern Language professoriate at a British University, has elicited very varied opinions. Taking the University answers by themselves, the first of the groups mentioned above, that is to say, Modern Language teachers of British birth, are, without exception, although in varying degree, in favour of a mainly British professoriate, and regard such as the ideal to be aimed at. The second group show a remarkable divergence of opinion. Teachers of German birth are entirely in favour of either a mainly British teaching staff, or at most a staff equally divided; while our colleagues of French birth, with equal unanimity, desire a wholly or predominantly French professoriate for their subject. In two cases, in fact—both professors of French nationality—it was held that only a Frenchman should be eligible for a professorship of French at a British University. No one, on the other hand, has

demanding the absolute exclusion of foreign teachers, and only six or seven regard the exclusion as a possible ideal to be aimed at. The third group, whose opinion is, in many ways, of most practical importance, is predominantly in favour of a mainly British professoriate, with a foreign admixture. There is, however, considerable divergence of view in matters of detail.

Turning to the answers received from Head Masters and Head Mistresses—some 220—we find an overwhelming preponderance of opinion (82 per cent.) in favour of a British professoriate, with more or less help from subordinate foreign members of the staff. Eleven or twelve (*circa* 5½ per cent.) demand a foreign professoriate with, at most, British-born assistants, and the remaining 12½ per cent. maintain the view that the “best man,” irrespective of nationality, should be chosen.

The most interesting and helpful answers have been received to Question (4), dealing with the organization of a Modern Language department. Different conditions, it is pointed out, prevail at different Universities, and what might be adapted to a small University College might obviously not hold good in a large University which has at its disposal the means of providing a larger staff. In the large Universities there are opportunities for greater variety and higher specialization. Where there are two professors it is suggested that one of these should be British, the other might be foreign, and, in the case of the latter, the conditions might be such that previous residence in England and familiarity with English life and ideas were neither necessary nor desirable. At a smaller University, on the other hand, the view is pretty general that a British professor with a foreign assistant will best meet the requirements. On the whole, the impression which the answers to this question leave is that local conditions must be taken into consideration in deciding the policy to be followed.

On the more definite question as to the introduction of the Continental system of a foreign *Lektor* or Assistant some valuable suggestions have been made. Taking again the answers from the Universities only, some thirty-two consider that the most satisfactory system is to have a British-born professor and a foreign *Lektor* or Assistant; about thirteen wish, in the place of the latter, a foreign teacher whose standing and salary shall be higher than those of the Continental *Lektor*—a kind of “Assistant Professor,” with the prospect of promotion; while seventeen express indifference as to whether the Professor is British or foreign, but in the former case they consider a foreign assistant indispensable, in the latter a British assistant.

From the answers favourable to the Professor and *Lektor* arrangement we note the following suggestions:—(1) That the *Lektor* should be a teacher who, in his own country, would be regarded as eligible for a University appointment; (2) that foreign *Lektors* should be appointed, as in Sweden, for a limited period of time. Amongst the objections raised by those who are opposed to the system we note the following:—(1) That the *Lektor's* main interest is apt to be not the language he is called upon to teach, but that of the country in which he is teaching; (2) that the appointment of *Lektors* might lead to the delegation to them, on the part of the British Professor whose interests were philological or literary, of too much of the practical teaching of the foreign language, and that this would be fatal to the function of the Universities as training centres for Modern Language teachers. Taken generally, however, opinion seems to be opposed to the adoption of any rigid system at our Universities.

Questions dealing with the qualifications necessary or desirable in the University teacher of Modern Languages, have not yielded very satisfactory results. In the opinion of most of those consulted, the ability to carry out linguistic or literary research is regarded as indispensable, and superior to the possession of a high degree. The majority also agree in placing “teaching power” at the head of the list; while in several answers additional qualifications are mentioned, such as experience, judgment, personality. A thorough knowledge of the foreign language is naturally regarded as a *sine qua*

non; but there is considerable difference of opinion as to how far a similar knowledge of English, or of English conditions and intellectual standards, is necessary. On the whole, however, it is recognized that the lack of an effective knowledge of English and of understanding of our national life has been, in the past, too often condoned by bodies making University appointments.

The necessarily limited answers to the two special questions relative to actual appointments did not furnish sufficient evidence to enable the Committee to come to a decision as to whether in any recent appointment a foreign candidate was preferred to a British one on any ground but that of greater suitability for the post in question.

Much of the divergence of view presented in these answers is due to varying opinion with regard to the object of Modern Language study, and the precise functions of a Professor of Modern Languages. There is a definitely utilitarian point of view put forward, mainly by teachers of subjects other than modern languages, according to which the chief business of the Universities is to provide a practical knowledge of the foreign language; from this standpoint fluency and accuracy in the use of the language are regarded as of the first importance. There are others, again, who do not attach such weight to the purely practical side, and rather look to Modern Languages and Literatures taking their place, as instruments of mental training and taste, in a liberal education by the side of Latin and Greek. Another fruitful source of divergent opinion is the question as to what attitude should be taken up towards a foreign language and literature. One school of opinion holds that we should, in the appreciation and criticism of foreign literature, adopt entirely the point of view of the educated Frenchman or German, &c.; whereas the opposite school of opinion believes that it is in the interests of our national education to foster in British Universities the British standpoint, as in the case, say, of Greek, Latin, or history, and that to understand the foreign standpoint and obtain the foreign “atmosphere,” the student ought to go abroad. This school maintains that, by looking at a foreign literature with our own, and not foreign, eyes, we are best able to assimilate the elements of that foreign culture which are of real value to the furtherance and deepening of our own.

The members of the Committee feel that it does not lie within their purview to enter into a discussion of such controversial matters in their report; but they have endeavoured to keep in view, and as far as possible allow for, the conflicting standpoints. They have very carefully weighed and sifted the evidence laid before them, and considered in detail all proposals and suggestions; and they would take this opportunity of expressing their warm thanks to all those who have so kindly co-operated with them, either by filling up the *Questionnaire* or by appearing before the Committee in London.

The conclusions which the Committee has arrived at are as follows:—

I. The Committee is of opinion that, in making University appointments in Modern Languages, all prejudices—where such still exist—against candidates of British birth are groundless, and to be deprecated. It is clearly the business of the University to obtain the most suitable occupant for the position which has to be filled; and for this reason they feel strongly that a fair field is essential. Any restrictions tending to limit the field of selection by favouring foreign candidates, would be prejudicial to the efficiency of University work in Modern Languages, as foreign scholars of high academic rank and of equal attainments with professors in their own Universities, whose field of activity is their own language and literature, are only in exceptional cases to be tempted to expatriate themselves.

II. The Committee holds that the ideal would be a professoriate consisting as a rule of British-born subjects, and, while recognizing the difficulties under which British candidates have laboured in the past, believes that the recommendations made in this Report would make it possible more and more to appoint British-born subjects as the responsible heads of Modern Language departments at British Universities. It must be remembered that such persons have,

as Members of the Senate of the University, to assist in the government of the University, that they are responsible for the organization of the Department, the arrangement of Courses, Lectures, and Examinations, and that they have to advise students with regard to their studies and future careers.

III. Where appointments of foreigners are made to *permanent* posts, the Committee, basing its opinion on the evidence submitted, thinks that certain conditions should be kept in view. These are: (1) that the foreigner should possess the rank as a scholar which would entitle him to occupy a similar position in a University of his own country; (2) that he should be familiar and in sympathy with us in respect not merely of education, but our national life generally; (3) that his activity as a teacher and a scholar should be directed to further the cause of the branch of learning he represents in this country; and (4) that naturalization should be a *sine qua non*. It may be pointed out that in France all occupants of University Chairs must be French by birth or naturalization, and all must be in possession of the French doctorate in letters or science.

IV. The Committee does not feel, in view of the evidence submitted to it, that it would serve any good purpose to arrange in order of importance the qualifications of a candidate for a University Chair. In most appointments personality plays an important part, and, while scholarship and research work are of the first importance, teaching and lecturing ability must not be undervalued. A thorough knowledge of the language in question goes without saying, while an inadequate knowledge of English would be a serious drawback, even in the case of a temporary post. In any case, the evaluation of such qualifications should be left to a Committee of Experts dealing with individual appointments.

V. The Committee confidently hopes that the most suitable candidates, whom it is the object of the Universities to discover, will be found with increasing frequency among British scholars. It believes that the chief problem is to bring this state of things about; and that the efficient training of British scholars at British Universities, with a view to occupying the highest University positions, is of the first importance. While assuming the more obvious desiderata, such as academic distinction, scholarly specialization, lengthy residence abroad, &c., the Committee would like to submit the following points for consideration:—(1) The British candidate has, it is believed, too often relied on the possession of a high degree, combined with study at a foreign University, and perhaps also a foreign degree, as constituting in themselves a passport to a University Chair. It cannot be sufficiently emphasized that, in view of the requirements of most British Universities at the present day, the candidate will greatly limit his chances of success unless such distinctions be supplemented by proved ability to carry forward some branch of his subject by means of criticism or research in the form of published work, as well as by clear gifts as a lecturer and teacher. (2) The position of Assistants in the Modern Language Departments of our Universities is, in most cases, unsatisfactory. The work required is often excessive, and effectively prevents independent scholarly activity, while the salary is so low as to make it necessary for a man in such a position to eke out his income by examining, editing school texts, journalism, and the like, instead of winning a reputation for himself by scholarly work, which, in itself, is financially unprofitable. The Committee is of opinion that an improvement in the salary of Assistants is urgently called for, and that it would lead to a corresponding improvement in the status of both the teachers and the subject.

VI. The Committee approaches with some diffidence the question of the internal organization of the Modern Language Department of a University. It recognizes that the particular system of a British professor assisted by a foreign *Lektor* or *Assistant*, which found most favour in the answers to the *Questionnaire*, might not be suitable in all cases. At the same time, the Committee favours this plan; that is to say, the appointment of a young foreigner, whose own personal

interests may be English, and not his own language and literature, and whose future lies in his own country, as being likely to meet most requirements. The Committee would, however, deprecate the view that a foreign teacher of this type can, as assistant, take the place of a trained specialist in the language and literature to be taught; his functions should rather be supplementary. One good feature in the plan is that its existence in most Continental countries gives us the advantage of reciprocity—a matter of importance for the training of our own future professors of Modern Languages. Such reciprocity does not exist where higher positions are concerned. It may be noted that of British-born teachers of modern languages at the Universities of Great Britain and Ireland, a considerable proportion have been, for a time, *Lektors* or Assistants in English at German or French Universities. The Committee is strongly of opinion that the appointment of a foreign teacher of this kind should be made only for a limited period.

VII. The high standard of Modern Language teaching on the Continent is due in no small measure to the fact that foreign governments give, in certain cases, financial help to intending professors to enable them to pursue their studies abroad. At present, British candidates for Modern Language professorships, if they wish after taking their degree to study at foreign Universities, are obliged to do so at their own expense. To enable British candidates to compete on more equal terms with foreigners, the Committee is strongly of opinion that the Government should be asked to make a grant of a certain annual sum to provide scholarships. Appointments, or at least nominations to such scholarships, should be in the hands of the Universities.

VIII. The Committee thinks that, after the War, the question of the exchange of University professors—at least, between the allied nations—should not be lost sight of. It is also in favour of the principle of allowing terms kept in foreign Universities to count towards the number necessary for obtaining a degree in the University to which the student was originally attached.

IX. The Committee further thinks that an extension of the *Privat-Dozent* system, which already obtains in at least one British University, might also prove helpful.

October, 1916.

PREPARATION OF THE FUTURE TEACHER IN FRENCH AND OTHER MODERN LANGUAGES.

By CLOUDESLEY BRERETON.

SEVERAL years ago the Modern Language Association appointed a committee to consider the preparation of the future teacher whether specialist or subsidiary. Subsequent experience, while confirming the value of certain parts of that report, has revealed the need of modifying it in certain directions.

As regards the preparation of the specialist teacher, it is now clear that the Universities in too many instances have not considered sufficiently as a problem by itself the curriculum most suitable for the future specialist in Modern Languages. Under the undue influence of German ideals the

study of language and literature in our Universities has tended too exclusively to the acquisition of expertness in textual criticism and philological erudition to the detriment of the study of the *living language* and the people, as far as the future teacher is concerned.

Research no doubt is an excellent thing, but too often the subject chosen by the student under the direction of the professor for research has had little effect in increasing his command of the modern language and literature he will have to teach in the schools. Residence abroad, hitherto generally at the student's expense, may help to fill up the gaps in his knowledge, but such treatment is often rather remedial. It has often to be largely devoted to redressing deficiencies which, had the course followed by the student been more suitable, would never have come into existence.

In setting out the bare essentials required in the preparation of a specialist teacher, it is best to deal explicitly with French. First, because the numbers of teachers of French largely exceeds the total of those teaching other languages; and, secondly, because each foreign nation lays stress on different branches of its language teaching—France, for instance, on *belles-lettres*, and Germany on philology, if not in its schools at least in its Universities. An attempt to draw up a scheme applicable to all languages would only complicate a task which, if French alone is taken, is comparatively clear. Thus, while we believe that the courses for other languages should largely approximate to that given below for French, it is possible that a larger share might be given to the study of philology in German, assuming, of course that a due knowledge of the modern German language and literature can be gained in a shorter time by the student. Similar variations might be desirable in the case of Russian, Spanish, or Italian.

What, then, are the indispensable requirements for a teacher of French? One would say: (a) A real command of the spoken language, implying power to speak fluently and idiomatically and to distinguish between what is and what is not good French. Ability likewise to write really idiomatic literary French—not the mere literal *mot à mot* translation that is often accepted in its place from University candidates. (b) A good knowledge of the chief authors of the sixteenth, seventeenth, eighteenth, and nineteenth centuries, and some acquaintance with a few masterpieces of early and medieval times, together with a knowledge of the general outlines of French literature and a few indispensable notions on the evolution of the language. (c) Some real knowledge of French history and life. These appear to be the absolute minimum in the equipment of a really efficient teacher of French. If he possesses knowledge in other branches of French, whether philosophy or philology, so much the better, but the others come first. If any time is left (which one doubts) it can be devoted to the study of some other branch. But it cannot be too strongly insisted on that no amount of philological or other study will compensate, as is implicitly implied in many of the present syllabuses, for an ignorance of modern French literature or for inability to write decent French prose or to distinguish between what is or is not good French.

Those who are concerned with the teaching of French in our secondary schools have a right to demand that this indispensable minimum should receive first and foremost attention as far as candidates for the teaching profession are concerned.

Now, without interfering with the existing University programs, which are probably a good preparation for the future philologist, it would be quite feasible to meet the needs of the future French teacher by creating, in all instances where it seems necessary, an alternative course or courses in modern French language or literature alongside of the existing ones.

It is easy to see, by a glance at many of the existing courses, how overweighted they are from the philological side, whether one takes London, Oxford, or Cambridge; though in the last instance there is provided an alternative course which is less philological than those at the other two. We believe that a

scrutiny of the programs of the provincial Universities will reveal the same defects in varying degree. As an extreme case, we may take the London course for the B.A. in Honours in 1916, in which no author later than the seventeenth century was set. Many other examples, some of them less extreme, might be given. It seems, however, unnecessary to do so, because the object of this memorandum is not to dilate on what appear to be patent defects, but to put forward what appear to be necessary and practical remedies.

Assuming, then, the vital need of an alternative course, it should, we think, lead up to an examination of the following nature. (Such an examination might, of course, consist of two parts, but that is a matter for internal arrangement by the University concerned.) (a) A French essay of three hours on a single subject to be selected out of several. (b) Translation into French of a really idiomatic type, quality being regarded as at least as important as quantity, and the length of the paper being framed accordingly. (c) Translation into English based on the program of authors indicated above—whether some should be specifically set or not is a detail. Here, again, a high standard of English should be demanded. This has not always been the case, owing to the comparative ignorance of some of the foreign examiners of idiomatic English. (d) A knowledge of French literature, to be tested by questions on at most some three or four subjects, such questions to involve the exercise of real critical and literary ability rather than the mere reproduction of facts and textbook *clichés* about authors or periods, candidates answering the paper in French to be marked on a higher maximum. (e) A general knowledge of French history to be tested in the same fashion. (f) A short paper on phonetics, including dictation.

In (d) and (e) the mere knowledge of salient dates and isolated facts might be tested at an oral examination. The candidate's powers of *lecture expliquée* should also be tested as well as his powers of giving an *explication orale* in the language. The same *lecture expliquée* could be utilized to probe the candidate's knowledge of syntactical points or of historical grammar on its broad lines or of semantics.

For higher examinations like the London M.A., where a thesis has to be selected, candidates whether destined for, or actually in, the teaching profession, should be encouraged to take up some comparatively modern literary question which will be of direct use in their future career. The thesis should of course be in French, and the other part of the examination should bear first and foremost on the modern side of the language, and be conducted mainly in French.

In this case, as for the Honours B.A., some general notions of the growth and development of the French language would be advantageous, but the philology should be studied for the sake of the literature, not the literature for the sake of the philology. A modicum of philology is no doubt necessary to enable the student to read the *Chanson de Roland* and other masterpieces of early or medieval times, but it is hard to see that it need be much greater than the corresponding amount of ancient Greek that the student of classics requires to know in order to understand and appreciate Homer. He wants to be able to recognize the forms when he comes across them, but there is no need for him to learn to conjugate or decline the various parts of antiquated speech.

As regards the question of taking up one or two languages, we are strongly of opinion that candidates for honours at least should take up only one language. If a subsidiary subject is thought desirable, it might either be a second language (English, Latin, German, &c.), or continental history, or any other subject the candidate desired later on to teach as a subsidiary subject.

If more thoroughgoing reforms were instituted we, should like to see the oral side largely extended in the direction of the methods in vogue in France, not only for the B.A. degree, but also for the M.A. Everything that increases the teacher's powers to handle the language orally is of direct value to him in the exercise of his craft.

A still more wide-reaching reform, required in some Universities, is the much desired reduction of subjects to be taken in the intermediate and even final examinations.

Nothing would give French in such cases a better chance of being taught in a really adequate fashion.

Another desirable reform is the generalization in all Universities of the practice of allowing students to attend a selected University abroad for part of their course. This is already done with success in some Universities. In others the arrangement is either a dead letter or non-existent. The whole point is that work done abroad must be allowed directly to count for the examination the student has in view.

Again, the temporary exchange of professors between French and English Universities, or the invitation of a French professor to give a course of lectures, would likewise help to improve the standard of knowledge and bring the candidates into touch with the best side of French life and thought.

But our modern language teachers will always be at a disadvantage in comparison with their colleagues in France till the requisite State aid is given for a definite stay abroad, preferably, I think, in the middle of their University career. Now that the Government is proposing to create major scholarships for science it cannot refuse to do less for modern languages. Appointment of candidates for these posts might be left to the Universities, care being taken that a sufficient number were awarded to candidates who showed a real humanistic and literary ability as against the mere acquisition of philological erudition.

Where students can spare the time and money for pedagogical training, the Universities' professors in French seem specially fitted to give them that part of their training which concerns the language they are proposing to teach. But here, again, until more financial encouragement is given by the State to those who desire training, matters can only go slowly; otherwise something might be done in this direction, if the larger Local Authorities would insist on teachers hitherto untrained taking up a course of training provided by them as a condition of all future appointments.

If, as one believes, the branches of the subject indicated above are indispensable for the subsidiary teacher, then it follows that the examination for such teachers should, *mutatis mutandis* as far as French is concerned, follow the same lines, but naturally considerably less would have to be demanded. It should be a *sine qua non* with such teachers that they can speak with reasonable accuracy and fluency, write fairly idiomatic French prose, and have some knowledge of French literature and history. It is a certainty that with these students there is no room for excursions into philology, whether the examination be in French only or whether French be only one of several subjects. As regards the examination itself, a test of the scope and standard of the London certificate, with additional papers in Literature and History (which could be answered in English), would give us an extremely useful type of subsidiary teacher.

The extraordinary criticism is still to be met with that, if we set out to teach modern French in the University, we are proposing to teach something of little more educational value than "courier French," to quote the exact "catch-word" employed. While strongly believing in the value of good colloquial French as one of the means of understanding and appreciating literary French, we are convinced that the main object and ideal of French teaching in the University should be to initiate the student into as full a possession as possible of the literary side of the language. Between good colloquial French and "courier French" there is at least as much difference as between the English of a cultured Oxford don and that of a railway porter, while the distance between the French of, say, Anatole France or Maurice Barrès and that of the *courrier* is certainly as great as the distance between the prose of Walter Pater and that of the railway porter cited above. To imply that there is no literary French to be learnt and acquired is an indirect insult to a nation who, as far as teaching the technique of literary art goes, is far in advance of ourselves.

Why the French professors have never protested against the insinuation is hard to explain. They had only to in-

vite their classical colleagues to send a deputation to Paris to be present at one of the examinations like the *agrégation* to realize once and for all the futility of the accusation. If such a deputation is ever sent, it probably will come back not only thoroughly converted, but also, very possibly, furnished with some useful ideas for improving Classical and English as well as Modern Language studies.

HISTORY AND THE MODERN HUMANITIES.

By H. L. HUTTON.

HISTORICAL information is necessary for the citizen of a free country; for his national activities he needs to know how his country, his empire, grew to be what it is morally, socially, legally, economically—in politics, in military matters. England is not an isolated unit. It was once the tradition to insist on the relation with Rome and Greece, and to ignore the relation with Jerusalem. The relation with all Western Europe was that of prolonged or spasmodic hostility. Spain, Holland—France, even—were enemies whom we had beaten, and could now ignore. I put this attitude in the past, but it persists. The realization of the other units is the task of the history teacher and the modern language teacher. From the national standpoint it is necessary information. I do not put its interest in the foreground. It may be as dull as a grammar lesson, and as necessary. The teacher's part is to teach it well; then, like grammar, it will be interesting. The community of Western Europe, as opposed to the idea of isolated antagonistic units, is a necessary conception. We are still a long way from realizing even the British Empire as a unit. But both conceptions are necessary, and can be acquired. Great Britain, then, exists as part of a greater whole; that has to be learnt.

In the story of the building up of French nationality, of territorial France, of France as a social unit—an intellectual, artistic, economic, moral unit—the English pupil may learn that patriotism and nationality are not things to be taken for granted, not "free gifts of Nature," things that grow of themselves without the need of anyone to trouble himself, but the result of hard work and intelligent effort. So we may escape from our insularity of thought and action better than by the older concentration of attention on Athens and Rome.

This is the joint work of the history and modern language teachers. The ideal would be that the teacher should combine both functions, and this is possible in all but the most advanced stages of school instruction. The training of the modern language teacher must include training in history. In view of national needs, we must all study at least one foreign language. All are agreed that the first language will be French. In the study must be included the history of the people who speak the language.

Elementary Stage.

Part of this study will be pursued in the history course. The co-ordination of the work will be considered later. The amount of historical information conveyed to the pupil in French, day by day, may be small. If carefully organized it will add up to a respectable total in a few years. The material is suitable for all stages. The vocabulary and constructions can be adapted to all stages. They can be used in simple question and answer and in colloquial narrative. Charlemagne and Louis XIV were human like ourselves. They got up, washed, and went to bed; they ate and drank. The intensive study of modern languages is subject to the law of increasing returns. Simple historical narratives are as worthy a subject as daily life throughout the four seasons. This work will not add to the heavy burden of the modern language teacher. He may need

a little additional information, but the manipulation of it will be familiar to him.

Intermediate Stage.

Later, this information must fit into a framework for the whole of French history. Here the teacher will need some training in method, in which he must in turn train his pupils: the importance of planning, the selection of fixed points, dates, events, personages, how to select, how to fix in the memory by the relation of event to event, the time sense which is the essence of history. The material he can draw from historical narratives or from fiction. Historical narratives are a valuable approach to reality. Pupils are surprised to find that Paul Déroulède and Gustave Fautras really fought in the Franco-Prussian War.

Advanced Stage.

The traditional course in Latin and Greek has one definite advantage over the usual Modern Language course in that it includes historians, orators and thinkers. It brings the pupils into contact with something different from Homer, Sophocles, Virgil, and Horace, the literature of information and ideas, as well as the literature of imagination and taste. It is a second approach to reality. It reveals the dignity and interest of the world in which we live. Plutarch's *Lives* has become a proverb as a source of inspiration for plain living and high thinking. The infectious curiosity of Herodotus, the search for accuracy and causation in Thucydides, the psychological analysis of Tacitus, the patient pursuit of truth in Plato bring the mind into contact with reality by other routes than the poet and writer of fiction. And these historians and thinkers are as great artists as any of them.

Can we find their equivalents in modern languages? Surely the French historians of the nineteenth century can supply what we need in French. They deal with a longer stretch of time and with events of equal importance: one event of transcendent importance, the growth and influence of Christianity, is all their own. They are full of noble characters and heroic deeds. Their generalizations are of lasting importance. They are great artists. Michelet alone deals with eighteen hundred years of history. His *Jeanne Darc* is as inspiring as any hero of antiquity. His presentation of the spirit of an age or locality, of the people, of the nation, is of lasting importance. Guizot's methodic search for the essence of a movement or a period is a fine example of the logic of history. Taine's examination of the State, the Church and Education, is the work of a great thinker. Thierry's narrative of the Normans or Merovingians is as alluring as any romance. Michelet's *Louis XI* and *Jeanne Darc* are greater as works of art than Casimir Delavigne's, or Schiller's or Walter Scott's. Taine's portrait of Danton is as much a masterpiece as Racine's *Athalie*, altogether apart from their relation to facts.

Like all men, men of letters or men of science, they have the qualities and defects of their age. A study of French literature or of French thought in the nineteenth century is incomplete without them. France as she is to-day facing the German Terror cannot be understood without a study of her past, and the ideas which have moulded the last hundred years of that past can best be seen in the minds of her great historians. The disintegrating analysis of Anatole France can be seen in Taine, and the gospel of Barrès or of Romain Rolland in Michelet.

The recognition of the past that never dies, of the local soul of town and province, the personality of the crowd and of united France, the heritage of the middle ages, reformation and revolution, with conflicting aims and achievements, but all the possession of Frenchmen to-day, we learn in the pages of her historians.

I have not mentioned all the great historians of the nineteenth century—those familiar with them will know their value. I will make only a passing reference to the great historians of the present. The work of Lavisse and Rambaud and others contains suitable material for class use. If it is objected that the cost is prohibitive, might we not try to arrange for the separate publication of some portions at a reasonable price?

In any case such works should be in the sixth form library. Germany has a special clause in her copyright law about such educational work.

To these we must add the charming narratives of early writers like Joinville and Froissart, the acute contemporary criticism of authors like La Bruyère and Fénelon, and the rich store of *mémoires*.

There is no need to state the case for the orators and thinkers, for Rabelais, Montaigne, Descartes, Bossuet, Pascal, Voltaire, Bergson. Only one point needs emphasis. They all deserve study for their style as well as their contents, for their method as well as their matter. They all write great literature.

The University.

Both for elementary and advanced work the teacher must have some historical training at the University in the modern language course. Once the teacher has been through a course as a pupil in school, the work at the University will have a solid foundation. The University course must keep in view the needs of the student as a future teacher.

He will study history as an integral part of literature, not as the "background" so often mentioned but so little understood, that background which can be sketched in and then forgotten, that background which "illuminates" like the foot-lights, but can be dispensed with outside the theatre.

And in studying modern history he must not forget that further past of David and Aeschylus and Virgil. That must come into his scheme. We cannot study all history in the original tongue, nor indeed in English. The time available is not unlimited; we must make a choice. We must choose something of the East, of Greece, and of Rome. We can group the study round our study of the Bible.

The modern language teacher must know more than the history of the people whose language he teaches, just as he must know more than the literature of that people. In both cases he must know his own. He must not work in splendid isolation. Specialization has been the death of broad culture and the modern language master may revive it. Some economic, social and political history he must know to be a good citizen, and something of the history of science. These are parts of a whole, and he must not forget the whole for his own particular parts.

Philology and History.

At present philology holds the field. For the training of British citizens, historical training is at least as important as philological training. Philology must be included in the scheme, for the history of the language is part of the history of the people. We need specialists in philology; but in the past our attention has been too closely fixed on specialists. They cannot take the place of the average intelligent citizen in national affairs; they cannot do the work of government, or of fighting, for him. It is with the average citizen that the school teacher is mostly concerned. The average student must acquire some knowledge of forms and certain philological conceptions, e.g. the conception that language is not fixed but has grown according to a plan that can be traced. This can be done effectively in the study of English between the ages of Elizabeth and George V, with the help of a book like Bradley's *Making of English*; for ignorance of our own history, language, and literature will not be tolerated in the modern language teacher. His knowledge will be extended and strengthened in each of the foreign languages that he studies. Some additions to the grammars in use in schools are needed for this purpose.

The Relations between the Teaching of History and of Modern Languages.

In some schools the coordination of these subjects has already been arranged. The plan adopted varies with the organization of the school. Where the language master is a form master, he takes history in the junior stage, and perhaps in the intermediate stage. In this case there is no difficulty in working according to a plan within the form, but

we must co-ordinate the work of the different forms. Where the two subjects are taken throughout the school by specialists, some principles of agreement must be arrived at or the subjects will only touch by accident. In this case difficulties sometimes occur, but it is to be hoped that the spirit of co-operation will grow.

In either type of school a scheme must be adopted. A co-ordinated scheme was published in *Modern Language Teaching*, November 1915. Methods that can be employed by the language teacher were described in *Modern Language Teaching*, December 1914. Suggestions for a German scheme were published in *Modern Language Teaching*, February 1914, and a French scheme is appended to this article.

Some critics, both linguistic and historical, have attempted to differentiate between form and matter. They would assign the study of form to the teacher of languages, and the study of matter to the historian. Such a divorce is radically impossible. You may have bad form or bad matter, but you cannot have matter without form or form without matter. The attempt to act on this impossible principle is the cause of many failures.

In the higher forms in schools and at the University, there must be some division of labour for the relief of the teacher, and some variety in the teaching for the benefit of the student. But the essential unity of these studies must be recognized. It is impossible to understand an historian without a knowledge both of language and of history.

The modern language master has the advantage of knowing the foreign country, its language and literature, the life and ways of its people. He is thus provided with a key to unlock the meaning of their history, which can be given by no book study. But he must know how to turn the key. He should, too, be familiar with the distinctive foreign view of any character, action or period; this he can often learn in the course of general conversation, more especially if his mind is directed to such subjects.

Scheme for the Study of French History.

Elementary Stage.

Material to consist of typical anecdotes and simple narratives of heroic men and women. Songs, especially national songs, may form centres of historic information.

The vocabulary and constructions will be those used in the rest of the work. The narratives should form part and parcel of the course, but it is also possible to use a collection of such narratives side by side with it.

The possibility of using such material in the first year depends on the age of the pupil. It ought to be possible in the second year.

Intermediate Stage.

A.—The narratives will be more complete, but still specially prepared, though historical novels and stories can be used, and longer poems. Short lectures may be delivered by the master, or by one or more of the pupils. Scenes may be dramatized and acted by the pupils.

The subjects will be taken especially from persons and actions hardly mentioned or altogether omitted from the history course as such, e.g. Saint Louis and Henri IV.

A few simple devices will correct the isolated character of the instruction, and introduce the sense of continuity:

1. The pupil must give the time in English history, marking it by some date and personality or event. Saint Louis is the contemporary of Henry III. Henri IV is assassinated in 1609. Elizabeth died in 1603.

2. He must place the events and people on the map: Charlemagne at Aix-la-Chapelle (Ardennes), The Normans at Rouen (Seine).

3. He must look before and after in French history: connect the French Revolution with Louis XIV and with Napoleon.

B.—To the material mentioned in A. will be added distinctively historical material like Michelet's *Jeanne Darc* or *Louis XI* (the later part) and collections of extracts.*

The teacher should now begin to use a plan into which all French history can gradually be fitted. He must select a limited number of names and dates as his fixed points:—

1. Clovis, Christmas, 496—connexion with old Roman Empire and Christianity.

2. Charlemagne, Christmas, 800—Holy Roman Empire.

3. Les Normands, 911, Rollo at Rouen—connexion between France and England.

4. Louis IX (1226–70, contemporary of Henry III)—Medieval Christianity; Crusades.

5. Louis XI (1461–1483, contemporary of Edward IV)—builds the "bastion de l'Est" and other bastions.

6. François I, 1525, Pavia (or 1520, Field of Cloth of Gold)—Renaissance; Reformation.

7. Henri IV, 1609, murder (Elizabeth died, 1603)—Failure of Reformation in France.

8. Louis XIV, 1643–1715 (Civil War, death of Anne)—1685, Revocation of the Edict of Nantes (1688, English Revolution)—The attempt to dominate Europe.

9. Revolution, 1789; Restoration, 1815. The modern world dates from this year in Western Europe.

10. Revolution, 1830 (Victoria, 1837).

11. Revolution of 1848. Year of Revolutions in Europe.

12. Franco-Prussian War, 1870. Followed by the Third Republic.

* These extracts may be long or short. They can be used for ordinary class work or for unseens and dictations. On them may be based free composition.

Scheme for the Study of German History. "Modern Language Teaching," March 1914.

A.

1. 800 A.D., Charlemagne—Holy Roman Empire.

2. 1521 A.D., Luther—The Reformation.

3. 1618 A.D., Wallenstein; Gustav Adolf—The Thirty Years' War.

4. 1740 A.D., Frederick the Great—The Rise of Prussia.

5. 1813 A.D., Blücher—The War of Liberation.

6. 1871 A.D., Bismarck; Moltke—The Union of Germany in the Empire under the leadership of Prussia.

For A, the material must be written or adapted for the purpose in the form of simple anecdote or narrative. Lyrics connected with the great men should be learnt.

B.

(Additions in following year.)

918 A.D., Henry the Fowler—Das heilige römische Reich der deutschen Nation.

1152 A.D. (Henry II of England), Barbarossa—Greatness of the Empire.

1212 A.D. (Great Charter), Frederick II—The Empire and Italy.

1273 A.D. (Edward I of England), Rudolf von Hapsburg—Rise of the House of Hapsburg.

1640 A.D., The Great Elector—Prussia's gains at end of Thirty Years' War.

1740 A.D., Frederick the Great—connected with Clive and Wolfe.

1805 and 1813 A.D., Königin Louise, Stein, Scharnhorst, von Humboldt—Jena as well as Leipzig; Reorganization of Prussia.

1864 A.D., Danish War—related to Franco-Prussian War.

1866 A.D., Austrian War.

For B, we can add something from Luther's translation of the Bible and from his other works.

Passages can be taken from Schiller's *Wallenstein*.

Passages from Lessing and Goethe.

Much of the material must still be specially prepared.

Portions of ballads and lyrics will be learnt by heart.

C.

We begin the study of German history in German authors. At first we shall draw chiefly on Schiller and Freytag, e.g.:—

1. Selections from *The Thirty Years' War* will be read, with selections from the *Lager*, the *Piccolomini*, and *Wallensteins Tod*.

2. Freytag's *Frederick the Great* will be read, with Lessing's *Minna von Barnhelm*.

3. Selections from Goethe's *Autobiography* will be read, with selections from his poems.

FRENCH POETRY IN THE CLASSROOM.

By HARDRESS O'GRADY.

MOST teachers are agreed that it is good to set a certain number of poems to be learnt by heart. Prose, too, suitably chosen, can be made to serve similar purposes. But not all teachers are agreed upon the object of such work and upon the methods which should be applied to carry it out.

Perhaps it would be more correct to say that few have given the matter much thought. Learning by heart was good—obviously—and there the matter remained. Yet it is evident that the matter need not remain there, and, if we can be certain of our objects, we shall be more certain of our method and more successful in our results.

The objects of teaching pupils to learn poetry by heart would seem to be (1) general literary training; (2) the enrichment of vocabulary; (3) the perfecting of pronunciation by practice, the perfecting of enunciation and the teaching of intonation, a much neglected side of language training. The methods arise naturally from the objects, but it is well to be more precise in our conception of these objects, certainly with regard to literary training and vocabulary. Finally, we must consider the question of matter and its suitability for recitation.

The question of general literary training is very vaguely treated in England. There has been little demand for it, and now that the demand is being made we must turn to France for methods and principles. With the small amount of time at our disposal for the teaching of French, French speech, French reading, French writing, we cannot give more than a small proportion of hours to general literary training in French. If English literature had received attention, if a general method of literary criticism in English existed, we should have less difficulty and more time. But before we satisfactorily introduce *explication de textes* or *explication française* we must practise the method in English. Or else we must be content to do a very little very well. It is here that preparation of French poetry for reciting comes to our aid. Limitation of space allows only the most summary treatment of the matter in this article.

First, we must at once distinguish between *questionnaire* and *lecture expliquée*. The latter expression is being quite wrongly used for the former. Questions on grammar, syntax, vocabulary are emphatically not *lecture expliquée*. Questions such as "Que fit Charles?" "Que dit Marie?" "Qu'est ce qu'une porte?" are not *explication française*. No, sir! *Explication française* is an arduous intellectual exercise, a rigorous application of scientific method. It is the study of form—the shape of a piece of prose or of a poem, its building up, its development, its parts and their relation to one another—and of matter, its content, its expression of the poet's thoughts, its relation to thought at the period and in contrast with thought at other periods. There is no limit to the treasure-trove of *explication*. Read Roustand and Rudler! But there is a limit, very definite, to what can be done in a French class in an English school.

Now the French authorities are agreed that the preliminary to a good *explication* is reading aloud of the piece. A French *rapport* says: "Un texte bien lu est déjà à demi commenté." And it will be discovered that to recite aloud a French poem really well we must make up our minds (a) as to what the author means to convey; (b) what method of building up, contrast, or rising to a climax he has used; (c) what lesser differences and contrasts serve to bring out the full meaning. All this is, of course, part of an *explication*. Next, we must translate our discoveries into our speech. We must show, by our general tone, speed, force, what is the author's general intention. We must show, by contrasts of tone, speed, force, the main contrasts of the poem, or by increase and decrease of tone, speed, force, any working to a climax, any relaxation. Finally, we must translate into our voice any finer stresses, contrasts, meanings. Who will deny that when a poem has been so studied, and by such a method committed to memory and recited, a real addition has been made to a pupil's knowledge of the poet and to his general literary training. For we have shown how thought, passion, and expression fuse; how words live as brothers, reacting one upon the other; we have used rigorous logic to discover inner truth; and in the effort to convey to the listener that which we have discovered we are educating our minds humanely.

Next, by committing to memory French poetry, after thorough examination both by *questionnaire* and by *explication*, we enrich our vocabulary. *Evidemment!* But let it be assured that the pupil is given an opportunity of using new

words, and perhaps phrases, in some written exercise. Only by immediate reproduction do we remember for future reproduction. The question of vocabulary is intimately bound up with that of selection, treated farther on in this article. Granted that suitable material has been chosen, we must make quite certain that the French of the poem is thoroughly understood before we proceed to *explication* as needed for recitation. We shall use the ordinary Reform Methods of question and answer, but we must never be afraid to supplement, or even to supersede, such methods by translation. But it is the teacher who must translate, or the chosen pupils after very careful preparation. In the lower forms it must be the teacher. In the senior forms teacher and chosen pupils will share this delicate and honourable task. Always the final version will be deferred till all possible preliminary work is completed. Ill prepared translation is criminal.

Thirdly, it is obvious that in recitation, in the preparation for recitation, we have a ready means of testing and perfecting pronunciation. The practice of sounds singly or in combination, while it is indispensable, does not of itself assure a correct pronunciation when the pupil is conversing or reciting. Constant correction in conversation is necessary, more especially where the foundation has been bad. For the perfecting of enunciation, that is the sending forth of the combined sounds of the poem in their full natural clearness and beauty, rounded and clear-cut (these are not phonetic terms), the reciting of French poetry is valuable. If the teacher be a sincere lover of these things, and if some of the passion of sincerity and endeavour has passed into the pupil from the teacher, then the attempt to utter the poet's words as he would have them uttered must react on the general enunciation of French. Lastly, as regards diction, the reciting of French poetry will help us greatly, if we do our best, to inculcate habits of intonation. Without a French intonation no one can be said to speak French well. Intonation is of the very essence of a language since it is formed in the larynx by the vocal chords it is the very expression of national existence. This is not nonsense. Read the modern physiologists to understand how closely throat reactions are connected with the human being's passions. A national habit of intonation will probably be found closely connected with national characteristics. Is not the falling intonation of the Englishman a sufficient indication of his *morgue*?

How to impress intonation on the pupil is a problem by itself. There is the gramophone . . . But, for any teacher who possesses a voice that is not a croak, it should be a matter for shame to use a blatant mechanism where the living tones of a human being can be used. Briefly indicated, a method which gives good results is: (1) To make the class repeat phrase by phrase, line by line, in absolute monotone. This eliminates the tendency to give the English intonation. (2) To replace, phrase by phrase, the monotone by the correct French intonation. This is obviously a case for drill. No excuse is needed. The sergeant has a place in the French classroom!

Finally, there is the question of suitable matter. As far as possible the poem chosen will be composed of ideas reasonably easy to understand by the children of the class. Concrete ideas, narrative, appeal more to the younger child. Such poems in French are not easy to find. Generally, modern poems will be chosen before poems containing archaic expressions. But we are surely not going to allow a girl or a boy who has completed a five-year course in French to leave school without knowing a poem or two by Charles d'Orléans, by poets of the *Pléiade*, some of Lafontaine's *Fables* (these are more easy to choose), and a few scenes from Molière. Everything rests with the teacher. The pupil must be warned not to use this archaic expression or that in his speech or in his writing. But how infinitely gracious some of those old expressions are! And must we banish from the school, perhaps the only place where Tom or Alice will have such a chance, the sage old Molière because he used words like *bailler*?

No poetry prepared and studied and learnt by heart for recitation in the manner indicated will ever be forgotten. All who care for the beauty of words and of man's emotions:

will agree with me that such work will endure, a precious possession for a life.

MODERN LANGUAGE STUDIES AFTER THE WAR.

By Prof. H. A. STRONG.

EVEN before the War it was widely felt that, if we were to hold our own in learning, in arts, or in commerce, it is above all things necessary to improve our teaching of modern languages, and discussion has been rife as to the best methods of teaching and of acquiring them. All such discussion is good and useful, and the fact of its existence shows a widespread feeling that all is not well in this particular department of education. The War has intensified the desire of all thinking persons for the better training of our scholars and students in modern languages. Officers and soldiers are loud in their regrets that they, after all their schooling, are practically monolingual; chambers of commerce are constantly impressing on young business men the advantages they are neglecting by their ignorance of the language of their customers; and society generally, including our politicians and our legislators, has taken to heart the fact that, had the tongue of our adversaries, or even those of our Allies, been familiar to our educated classes, we might have been forewarned of the evil to come. It is therefore well that methods of teaching modern languages should be discussed; but it is of more importance still that our schools and Universities should instil into their pupils the conviction that the study of modern languages is to be taken as seriously as that of Latin or Greek or mathematics, and is no longer to be regarded as the Cinderella of the curriculum.

A new spirit is required in our schools, a spirit of respect for learning and for things intellectual generally, but in particular for modern languages and their literature. This spirit can be largely created by school teachers and professors, and depends upon the magnetism of their personality and the seriousness which they attach to their calling, but it depends as well on the degree of importance attached by the parents of pupils to modern languages, and on their influence on the younger generation.

There are two questions with respect to the teaching of modern languages which will have to be carefully considered as affecting education in these subjects after the War. The first of these is what modern languages are to be taught, for the present world crisis must necessitate a shifting of values. We may safely take it for granted that under normal conditions French will continue to be the standard language taught in schools. Our admiration of and affection for our Allies will make us more attached than ever to their beautiful language and literature. Still, it is conceivable that in certain circumstances it may be found advisable to study another language instead of French; and in such cases permission would naturally be granted by the Governors and the Board of Education.

It is highly probable that the tendency in many secondary schools will be to drop altogether the study of Greek and to substitute for it a second modern language. Hitherto the second modern language has been German—and, indeed, our schools have hardly had the chance of teaching any other modern languages but French and German. But new linguistic claimants for appreciation have appeared on the scene, resting their claims partly on the intellectual, partly on the material, advantages which they have it in their power to offer. Spanish, Italian, and Russian are the chief claimants, while sensible persons will agree that, however the War ends, German will be a necessity for scholars, scientists, and for many business men. It would seem, then, that, as it would be impossible to teach more than two modern languages in our ordinary secondary or public schools, different schools should be encouraged to specialize in the teaching of a second

language. The choice would be determined by different circumstances, such as the wishes of the parents of pupils, the opportunities of obtaining good teachers of the language in question, &c. Of course, the Universities will have a great influence in deciding the question of a second language according to the greater or less recognition which they accord to its teaching. But it must always be recognized that languages have different educative values, varying with the age and circumstances. Thus, Latin ceased to be the dominant language of culture when it ceased to be the *lingua franca* of scholars. French lost some of its importance when it ceased to be the necessary vehicle of diplomacy. German has lost some of its value since rivals in intellectual culture are pressing their claims. Amongst these rivals Russian is the latest, and apparently the claimant which has succeeded in most successfully enforcing its claims on our educational world. The English public have discovered, to their surprise, that Russia boasts an extremely interesting literature, and that advantageous commercial openings are offered as a certainty to those who will equip themselves with a thorough knowledge of the Russian needs and of the Russian language. It cannot be too frequently insisted upon that splendid commercial successes are open to any British firms who will take the trouble to send out to the vast Empire of the East agents fitted in every way to secure the aims of their employers.

The present writer has been informed by an important Russian merchant that the agents of British commercial firms are very rarely met with in Russia, and, when met with, they are astonishingly ignorant of the right methods of achieving success with the Russian people. The Germans, on the other hand, have long since mastered, not merely the language, but the psychology of the Russian people, and hence their superior success in trading with the inhabitants of Russia. Now, the Russian language is very difficult, full of idioms, of quaint turns, of proverbs, of sentences begun and left to the interlocutor to finish. It is the outcome and reflection of a civilization in every way different from our own; the Russian psychology differs from the British psychology; the atmosphere in which the Russian lives and moves contrasts markedly with our own. Consequently, it must be impressed upon our young men who wish to make their way in commerce among Russians that it is imperative upon them to pass some time in Russia after acquiring the language in order to gain acquaintance with the thought and habits of the people with whom they hope to deal, and to adapt their manners to those of the Russians, and to get to know their peculiarities. They must lay aside their national brusquerie, and must endeavour to follow the workings of the Slav mind. They must remember that the upper classes of Russia (the so-called *Intelligenzia*) are very highly educated, and intolerant of vulgarity. Such students as will learn to know Russia and its language in this spirit will find in the vast Empire of our ally plenty of scope for their energies, and, it may be, a fine career. For the literary student, too, Russian offers a modern substitute for ancient Greek in the fullness of its inflexions and in the number and delicacy of usage of its linguistic particles, as well as in the novelty of the views of life taken by the best Russian authors.

Mme Jarintzov, in the book lately published on *The Russians and their Language*, asserts that "the Russians possess an extremely developed sense of what a scientist would call a *flair* for discovering the mood and position of others, an extreme tact, quickened not merely by diplomacy, but by genuine refinement of feeling, not only thinking *for*, but feeling *with*—they possess a word, *chutkost*, to express this sense." She also states truly that it would be impossible to converse in Russian if the speakers were confined to the few forms of address used by the English. On coming to live in England Russians feel uncomfortable in being addressed as if they were nonentities without any names or personalities. The customary way of addressing people belonging to different societies must be mastered and used naturally. It is then easy to understand that a residence among Russians is indispensable for anyone wishing to succeed in commerce or in society in the countries of our Allies.

A question will also arise as to who is to teach Russian in the schools where that language is the second language taught; are the teachers to be Englishmen or Russians; and how is their capacity to be tested? It is universally agreed that teachers of modern languages should, as a rule, be Englishmen qualified and approved as capable teachers, and it is to be regretted that there is as yet in this country no authority possessing the power to decide on the qualifications which form a teacher's fitness for his post. For the present we must content ourselves with the best teaching we can get, whether from Russians or from Englishmen. But it is important that some constituted authority should be brought into being which can decide as to the fitness of the teacher. Practically the best committee for the purpose would be one composed in part of the accredited teachers of Russian in our Universities, and local County Councils should be represented by delegates chosen among their members for their knowledge of the educational needs of the school district.

In a few years we shall have plenty of young Englishmen and Englishwomen qualified to teach Russian, for large numbers are studying this language alike in our older and more modern Universities, and, fortunately for us, a fair number of our University students after taking their degree are glad to accept tutorships in Russian families, where they have exceptional facilities of mastering the Russian language and learning to appreciate Russian ways of thought. Meantime, the schools must act on the legal principle of *caveat emptor*, and we must trust that Russia will send us some good material from which to select our teachers. We must also trust that scholarships and bursaries may be established in our Universities to be held by students learning Russian, and it is gratifying to hear that a beginning has already been made in this direction.

CORRESPONDENCE.

THE DIRECT METHOD AND TRANSLATION.

To the Editor of The Journal of Education.

DEAR SIR,—Practical teachers of modern languages are getting a little weary of the Direct Method controversy. Fifteen years ago it was different; we were delighted with the new learning and readily became converts. Since then we have been putting principles into practice, comparing theories with results, making, not occasional, but daily experiments, with the result that many of us have been led by practical and unavoidable difficulties, by the exigencies of existing conditions, to modify our methods considerably. In some cases, further investigation has even led us to modify our principles. Every efficient teacher who has thus been through the mill has by now found the particular method which suits him best, which *pays* best in the highest sense of the word, and he is apt to be a little impatient of the "experts" (often self-constituted and seldom engaged in daily school teaching) who lay down the law. He passes them by in silence and gets on with his work.

This attitude is perfectly natural, but it is to be regretted because this silence is likely to be misconstrued. We are looking forward to a great educational awakening after the war. Modern languages have been honoured by the formation of a special departmental committee on which those engaged in, or closely connected with, modern language teaching are, rightly or wrongly, scarcely represented at all. The first step towards progress is to clear the air, to give those concerned an accurate idea of the existing state of things. In the English educational world there has been a strong tendency of late years to pay great heed to the theorist, while the actual teacher, who is alone able to realize the practical difficulties of his work, has kept modestly in the background. *Litera scripta manet*, and it is not advisable that the record of opinion should proceed from one side only. It is from these considerations that I venture to reply to some of the points raised in Mr. Kirkman's letter. My own inclinations would lead me to keep silent.

Mr. Kirkman's suggestion that opposition to Direct Method tenets often springs from the fact that the teacher has not sufficient command of the language to put them into practice, strikes me as

being as ungenerous as it is untrue. We have heard it before, and the trotting out of this antique weapon would seem to suggest that Direct Methodists are hard pressed. To change the metaphor, one cannot help being reminded of the legal adage, "No defence; abuse the plaintiff's attorney." I had hoped that this *argumentum ad hominem* had already been consigned to oblivion, together with its fellow which waved aside every reference to unsatisfactory results as being "the fault of the exponent."

My experience leads me to the opposite view. It is the man whose knowledge of a language consists *only* in a certain limited and often inaccurate conversational fluency, the man whose qualifications are described by the familiar formula "modern languages acquired abroad," who is most anxious to air this knowledge in the classroom to the exclusion of the mother tongue. It is the teacher whose serious study of a language has inspired him with too much respect for it to be content with mere psittacism, who tends to part company with the Direct Method, in some of its applications, in favour of what he considers more intelligent procedure.

It is to be hoped that the day will soon come when such a gibe will be rendered impossible by the institution of a qualifying examination in England similar to the *Certificat d'aptitude* in France. Such a certificate would be a guarantee not only of a teacher's ability to read, speak, and write the language correctly, but also of his knowledge of its origins, grammar, historical development, and literature. At present there is no fixed standard by which elective bodies may judge of the varied qualifications offered by candidates for modern language posts, and the vague and often worthless claim to "residence abroad," or the possession of some irrelevant and valueless foreign degree, often counts more in the eyes of the uninitiated than more solid recommendations.

In spite of this confusion, however, there has been a considerable levelling up in the standard of late, and, whatever may have been the case twenty years ago, it would, I think, be difficult at the present time to find, in any reputable school, a teacher whose ability to speak the language was not equal to the demands of the Direct Method. Indeed, the weakness has not been entirely on the side of the teachers in the past; the theorists have not all been distinguished for their high attainments. In the first flush of the revived interest in modern languages, now nearly twenty years ago, there were not wanting instances of men with poor or unmarketable degrees in other subjects, who, after a visit or two to the Continent, "picked up" a knowledge of French or German, and forthwith blossomed out into "experts" on method.

Mr. Kirkman is surprised to learn that the building up of the habit of direct association is aimed at by any but the followers of the Direct Method. Yet, strange as it may appear, such is indeed the case. Every serious modern language teacher aims at giving his pupils a sound working knowledge of the language, or, at least, at starting them well along the road. This, of course, ultimately involves direct association. I have not yet met anyone who contended that ability to express oneself efficiently, or to read with ease and understanding in a foreign language, could possibly go hand-in-hand with mental translation. But "the longest way round" is sometimes "the shortest way home."

Time—or the lack of it—is the preponderant factor in the case, and numbers—in the shape of large classes—the next in importance. Sooner or later we are brought face to face with the fact that a child cannot obtain a sound working knowledge of a foreign language by devoting from three to four hours a week to it over a course of four or five years. We are faced with this alternative: shall we concentrate from the start upon the actual practice of the spoken language and the building up of direct association and *Sprachgefühl*, compelling the pupil to acquire the foreign language as he did his own, by using it; or shall we cut some of this procedure short by a judicious use of translation, so that we may traverse more ground and give the learner a general view of the language in its entirety—in other words, shall we supplement our practical work by a certain amount of theoretical teaching? My experience is that under the first system the small additional amount of facility in speaking is more than outweighed by the fragmentary nature of the pupil's knowledge of the language as a whole, and that he soon loses all that he has acquired when once he leaves school.

The Direct Method, rigidly adhered to in large classes, is too slow. The pupil must cover the whole field of grammar—accidence and syntax—if he is to leave school with a grasp of the language on which he can build, as a sure foundation, if future opportunities of practice come in his way, and which will remain with him as a permanent possession in any case. After all, we, of the older generation, had such a foundation laid for us. At the age of fifteen I not only gained distinction in French in the Junior Cambridge Local Examination, but used to read French authors at home for my own pleasure, and I was not in any way exceptional as compared with my contemporaries at school. Further, when I first set foot

on French soil a year or so later, I found to my delight that I could make myself understood. The old method was not *all* bad.

But suppose that, by the exclusion of English, we *do* succeed in setting up direct association as regards the very restricted vocabulary concerned (a doubtful supposition to my mind), the process has to be continued, for the greater part of the language, after the school course. In fact, direct association, like *Sprachgefühl*, can only be built up gradually by long and continuous practice of the language on an extended scale. To contend that three or four hours a week devoted to French (to say nothing of deductions to be made for mere matters of routine and the sharing of this time among a score or more of pupils) will enable a child to think in the language is to me absurd. If I am wrong, it should be possible to produce instances to prove the contrary. I am therefore convinced that we should concentrate chiefly on giving our pupils the *knowledge* of the language necessary for correct speaking or writing, that we should cover more ground, that we should aim at a general and accurate survey of the *terrain* rather than minute familiarity with one little corner of it. To spend most of our time in trying to get our pupils to speak French, and to write French in the form known as Free Composition, while their vocabulary is exiguous and their grammatical knowledge hazy and fragmentary, is to ask them to build without materials, to make bricks without straw.

There is much confused thinking on the question of direct association. The English child forms such an association between the word "dog" and his mental image of the animal denoted, because this is the first and the only name for the object that he has heard, and the association soon becomes "inseparable." Thus, when, later on, he is introduced to the French name *chien*—whether by a picture or any other method designed to exclude the mother tongue—as soon as it is clear in his mind what object is referred to, the word "dog" at once leaps into consciousness and is henceforward instantly suggested by the word *chien*. If he subsequently stays long enough in France to saturate himself with the language, hearing and speaking it, and no other, all day and every day, the association of the two names will grow weaker as that between the French name and the object gains strength. I do not believe this can happen at home in the occasional French lesson. Of two boys who thus go to France, the one who will the more readily assimilate the language in this way will, I believe, prove to be, not he who has spent his time in trying to gain colloquial facility and to form direct associations, but he who has got a grip of the theory of the language—in other words, mastered the grammar. By mastering the grammar I do not mean studying it in the abstract and in isolation, but by practical yet intelligent and conscious application.

The reading of texts by large classes, without translation, is attended by difficulties, to my mind, insurmountable. If the text is sufficiently easy to be not only well within the powers of the class, but rather below them, it can certainly be done; and this kind of rapid reading, in which probably no boy understands all that is read, and many have a very imperfect notion of its meaning, has its uses as an occasional exercise. Even in this case, however easy the text, if we stop to explain, in the foreign language, everything that *any* member of the class fails to understand, and every word with whose meaning *someone* is unacquainted, we shall get through very little, and what we do read will have its interest killed in the process. It is better, if we do it at all, to go on with little or no explanation, and to be content with partial comprehension on the part of the class. But here the great difficulty is to find texts which are sufficiently easy without being babyish—a fatal defect in the eyes of boys. As to the amount of progress that is likely to be made, we are too much in the dark to be able to judge. I confess that I am very sceptical. Sharp and earnest pupils may increase their vocabulary and their knowledge of the language by puzzling out meanings from context, but the majority will hardly make this effort. They are more likely to regard the lesson as an excellent opportunity for remaining in that state of mental repose so dear to schoolboys.

When we come to more difficult authors, the obstacles are still less easily surmounted. Explanations in the foreign tongue, even if we succeed in avoiding the fallacy of *ignotum per ignotius*, will be so frequent and prolonged as to destroy all interest in what is read. If we resort to English to save time, we might as well translate. If we invite questions on points not understood, we shall get them—from a few ardent spirits. Others will be content not to understand, and some who would like to do so will be discouraged by the difficulties with which they are faced.

But Mr. Kirkman tells us that we should not put our pupils on to more difficult texts until they can read and understand them without translation. I cannot see that this procedure is likely to be any more successful than that of refraining to go into the water till one has learnt to swim.

I regard translation as a necessary evil. All things considered,

I am convinced by my experience that, with large classes and limited time, it pays best to translate (of course, after reading the passage in French), and then to make what has been read the basis of conversation and oral reproduction in the foreign language. If our pupils were in France, hearing and forced to speak French all day, if they had a daily French reading lesson, translation would be unnecessary. Their vocabulary would grow naturally, as in the case of the mother tongue, by an almost unconscious process of inference. Natural methods demand natural conditions; artificial conditions involve artificial methods.

STATISTICS ON BUSINESS AND COMMERCIAL EDUCATION.

To the Editor of The Journal of Education.

DEAR SIR,—The Central Committee for National Patriotic Organizations is anxious to draw up for publication a brief, but complete, statement of all educational facilities (including grants, scholarships, &c.) now in existence or in contemplation throughout the United Kingdom which deal with commercial and business education, with special reference to foreign commerce as conducted in this country or overseas. For this purpose I have approached, I believe, all the Universities, Colleges, Chambers of Commerce, and various other Associations interested in the question, and a very large amount of valuable information has already been received. In case, however, any source of knowledge has been neglected, I shall be very glad if you would kindly publish this letter, and I should be grateful to any heads of colleges, schools, institutions, &c., offering such facilities, who would forward a statement to the Secretary at this address.

It is hoped that this publication may be followed by a second, in which criticisms of the present system and practical suggestions for the future, collected from educational, business, overseas, and occasional experts, and divided under definite subject headings, may be embodied.—Yours faithfully,

HENRY CUST.

Canadian Pacific Building,
62 Charing Cross, London, S.W.

GILCHRIST EDUCATIONAL TRUST.—The Trustees announce that, in February next, they will proceed to the election of a candidate for the Studentship in Geography (£80), founded for the improvement of the teaching of geography, by giving an opportunity of further geographical study to the teacher who seems likely to make the best use of such opportunity. All applications must be made, before January 25, 1917, to Prof. Lyde, at University College, Gower Street, London, W.C.

JAMES ALLEN'S GIRLS' SCHOOL, DULWICH.—The annual distribution of prizes and certificates took place on Friday, November 3. The Chair was taken by D. C. Richmond, Esq., C.B., Chairman of the Governors of the School, and the prizes and certificates were distributed by Miss R. Oldham, M.A., Head Mistress of the Streatham Hill High School, who gave a most interesting and helpful address on the subject of "Openings for Educated Women." This year, as last, on account of the War, certificates were given instead of book prizes, except in the case of those prizes for which there are special endowments. The Chairman announced that the Board of Education had renewed for a second triennium the special grant of £150 a year made to the school for the extension of its outdoor botanical work. He went on to say:—"The exigencies of the War press heavily, not only on our homes, but also on such a school as ours. We, the Governors of James Allen's School, have readily complied with the demands made upon us for the exercise of a stringent economy, and we have, in fact, made various retrenchments of expenditure to the full amount required of us, in such manner as in our judgment will least interfere with the good working of the school. The effective maintenance of the high standard of work of which we are proud is with us a paramount object; and if, in our methods of economy we have not been able to fall into line with those laid down by the London County Council, to whom we are indebted for valuable assistance in the past, we can only regret that a difference between us should be maintained on grounds which appear to us to be so insufficient."

T. C. & E. C. JACK'S NEW GIFT BOOKS

Handsome Bindings Beautifully Illustrated

Cloth. 5/- net **OLD PETER'S RUSSIAN TALES.** By ARTHUR RANSOME. With Illustrations in Colour and Black, and Cover Design by the Russian Artist DMITRI MITROKHIN.

Some of the most charming of Russian Fairy Tales are here told by Mr. Ransome, whose rare gift of story-telling and knowledge of Russia and her literature enable him to convey to his readers more of the genuine Russian spirit than is usual. The pictures by Dmitri Mitrokhin, striking and delightful as works of art, and distinctly Russian in character, combine with the letterpress to make this volume, as it were, a looking glass reflecting the wonder, simplicity, and piety of the Russian character.

10/6 net **FLOWERS I LOVE.** A series of Reproductions in Full Colours from 24 Original Drawings by KATHARINE CAMERON. With an Anthology of Flower Poems by EDWARD THOMAS. A delightful gift book.

Reissue of this Beautiful Volume at a Lower Price.

3/6 net **THE CHILD'S LIFE OF JESUS.** By C. M. STEEDMAN. The 16 Reproductions in Colours are from Drawings by PAUL WOODROFFE. Binding design by the Artist. Sq. 8vo, Cloth.

3/6 net **A NURSERY GEOGRAPHY.** By G. S. DIXON. The Illustrations, which consist of 20 full-page Plates in Colour, and a large number of Text Illustrations are by GEORGE MORROW.

"A Nursery History of England" and "A Nursery Book of Science" have enjoyed a very large sale. This new volume will, it is hoped, be as generally acceptable.

A New Series—"Through the Camera."

2/6 net each **WILD FLOWERS OF BRITAIN** through the Camera. A series of 100 Plates selected and described by MACGREGOR SKENE, B.Sc.

WILD BIRDS OF BRITAIN through the Camera. Series of 100 Plates selected and described by F. B. KIRKMAN, B.A. (Oxon).

A New Historical Series.

2/6 each net **THE NATIONS' HISTORIES.** The aim of the "Nations' Histories" is to give in as interesting a form as possible the stories of the nations from earliest times. More attention than usual is given to the topography, archæology, and architecture of the countries.

The following volumes are now ready:—

POLAND. By G. E. SLOCOMBE.

JAPAN. By F. HADLAND DAVIS.

GERMANY. By W. T. WAUGH, M.A.

Other volumes will follow at regular intervals.

THE ESSENTIALS OF TEACHING A BOOK FOR AMATEURS.

By T. J. BURNETT, M.A.,

Head Master of James Gillespie's Higher Grade School, Edinburgh, lately Master of Method under the Edinburgh School Board.

"Mr. Burnett's style is clear and forcible, and his illustrative remarks are pointed and felicitous. . . . The chapter on classroom management is admirable, and teachers of experience will be impressed by the methods of tuition that are explained with equal fulness and precision."—*ABERDEEN DAILY JOURNAL.*

"This admirable and compendious volume. . . . For all non-professional teachers it should prove an invaluable textbook."

THE SCOTSMAN.

"A capital book."—*EDINBURGH EVENING NEWS.*

"An admirable series of clear and plain lectures. . . . We warmly commend the volume."

SHEFFIELD DAILY TELEGRAPH.

"An instructive book."—*THE ATHENÆUM.*

"Multum in parvo. . . . There is a certain vividness about Mr. Burnett's style and choice of illustrations."

SCHOOL GUARDIAN.

"Refreshing to read. . . . A sound and stimulating contribution to educational literature."—*TEACHERS' TIMES.*

"Exceptionally lively and readable. Should be popular among Training College students who find Psychology a dry subject."—*CAPE TOWN GAZETTE.*

LONGMANS, GREEN & CO.,
39 Paternoster Row, London.

A BOOK THAT "MAY BE USED WITH ADVANTAGE
WITH ANY FRENCH GRAMMAR."

EIGHTH EDITION. With Supplementary Easier Exercises.

Fcap. 8vo, cloth, interleaved. Price One Shilling.

HINTS ON FRENCH SYNTAX.

By FRANCIS STORR, B.A. Camb., Officier d'Académie, Occasional Inspector to Board of Education, Scottish Education Department, and Central Welsh Board; Examiner to Oxford and Cambridge Joint Board, Cambridge Higher Locals, Scottish Education Department, Civil Service Commission. University of London, &c., &c.

"A capital little book, which we have no hesitation in recommending to French students."—*The Pall Mall Gazette.*

"Mr. Storr's Hints are to the purpose. They are intended for schoolboys, but grown-up people who wish to avoid making elementary blunders in either writing or speaking may use them with advantage."—*The Athenæum.*

Extract from Author's Preface.—At the request of several Masters and Mistresses, who have used the *Hints* with their classes, I have added an Appendix with easier examples. In them more French words are supplied, and more references are given to the rules which they illustrate. The method of pitfalls is rightly discredited, and it is generally allowed to be a more fruitful discipline to prevent a pupil from making blunders than to rap him over the knuckles for making them. Even with the references the happy-go-lucky boy and the cocksure boy will both be caught tripping.

London: WILLIAM RICE, Junior, 3 Broadway, Ludgate Hill, E.C.

A Serious Question

SCHOOL FEES.

It probably will always be impossible to lay down any general rule on this subject, or to get it adopted or adhered to if one could be drawn up; and, of course, the War has brought its special difficulties. But it does seem advisable to give the matter careful consideration.

A year ago it appeared certain that school fees generally would have to be reduced. For a time very few inquiries came in at full fees; many parents, suddenly uncertain as to the future, were unwilling to commit themselves to the payment of charges of schools that otherwise they would have selected. But by now the new conditions have become more familiar, and parents, like others, are trying to adjust themselves to them.

In discussing the subject we are not claiming any authority to which we are not entitled. If we place a large number of pupils, we have to pay out in advertisements a good deal of money to secure them: a method which, under various forms, explains the success of many other business concerns, including good schools. But, at any rate, our experience should make our opinion worth consideration. And it is that the reduction of school fees on account of the War has, on the whole, been very much overdone, and in many instances has been both needless and unfair. After all, the first question ought to be—

Is it Necessary ?

Certainly it is neither necessary nor wise to *offer* reductions; and even where these are asked for, Principals might do well to weigh the request carefully.

Some parents have in the matter of school fees, as in other directions, been tempted to trade on the War, and to appropriate concessions that ought to have been reserved for the really unfortunate. It is a question how far they are to be blamed if they see reductions in fees advertised indiscriminately, and find Principals anticipating any possible suggestions of the kind from them; and it is evident that Principals would not do so if they could be convinced that such an offer was gratuitous and uncalled for.

And, if not actually necessary,

Is it Right

to accept lower fees in any but specially deserving cases? For everything else that has to be purchased our people have learned that they must be prepared to pay more. There is manifestly neither justice nor sense in proposing to pay actually less for education alone. It is barely arguable that the teaching could be supplied at *ante-bellum* charges. It might be, if teachers had not to live also. But as regards Boarding Schools there can be no such pretence. And, even if any temporary slump should seem to contradict our expectations, the fact remains that in the past parents have not proved utterly unreasonable when the facts were presented to them fairly, and that therefore the future rests largely in the hands of Principals themselves.
